Executive summary	1
CHAPTER 1 BUILDING A NATION THAT WORKS FOR ALL	12
1.1 Introduction	12
1.2 Background	12
1.3 Global developmental goals and objectives	14
1.4 National development planning.....	16
1.5 Strategic approach to the MTDP 2024–2029.....	17
1.6 Future scenarios to 2029 and beyond	21
1.7 Economic growth scenarios towards 2029	23
1.8 Key risks and mitigations.....	23
1.9 Summary	24
CHAPTER 2 ECONOMIC AND SOCIO-ECONOMIC REVIEW	27
2.1 Introduction	27
2.2 Progress against the National Development Plan 2030.....	27
2.3 Global economic context	30
2.4 South Africa’s macroeconomic context	32
2.4.1 Economic growth	32
2.4.2 Household consumption	34
2.4.3 Investment	34

2.4.4	Trade.....	36
2.4.5	Employment.....	37
2.4.6	Fiscal context.....	38
2.5	South Africa’s socio-economic context	39
2.5.1	Demographics	39
2.5.2	Education.....	42
2.5.3	Health.....	44
2.5.4	Social development.....	46
2.5.5	Basic services and human settlements	47
2.6	Summary	49
CHAPTER 3	STRATEGIC PRIORITY 1: DRIVE INCLUSIVE GROWTH AND JOB CREATION	51
3.1	Introduction	51
3.2	Problem statement	52
3.3	NDP goals and objectives.....	56
3.4	Outcomes for Strategic Priority 1.....	57
3.4.1	Increased employment and work opportunities	58
3.4.2	Accelerated growth of strategic industrial and labour-intensive sectors	59
3.4.3	Enabling environment for investment and improved competitiveness.....	61
3.4.4	Increased infrastructure investment, access and efficiency	64
3.4.5	Improved energy security and a just energy transition	65
3.4.6	Increased trade and investment	67
3.4.7	A dynamic science, technology and innovation ecosystem for growth.....	70
3.4.8.	Supportive and sustainable economic policy environment	71
3.4.9	Economic transformation and equitable inclusion of women, youth and persons with disabilities for a just society	72
3.5	Key enablers and interlinkages	73
3.6	Key risks and mitigations.....	74

3.7	Partnerships and contributions of the non-state sector	75
3.8	Summary	76
CHAPTER 4 STRATEGIC PRIORITY 2: REDUCE POVERTY AND TACKLE THE HIGH COST OF LIVING ...		78
4.1	Introduction	78
4.2	Problem statement	78
4.3	NDP goals and objectives	79
4.4	Outcomes for Strategic Priority 2.....	80
4.4.1	Reduced poverty and improved livelihoods.....	81
4.4.2	Improved coverage of social protection.....	83
4.4.3	Improved access to affordable and quality healthcare	83
4.4.4	Improved education outcomes and skills.....	85
4.4.5	Skills for the economy	85
4.4.7	Social cohesion and nation-building	86
4.5	Key enablers and interlinkages	88
4.6	Key risks and mitigations.....	88
4.7	Partnerships and contributions of the non-state sector	90
4.8	Summary	90
CHAPTER 5 STRATEGIC PRIORITY 3: BUILD A CAPABLE, ETHICAL AND DEVELOPMENTAL STATE		92
5.1	Introduction	92
5.2	Problem statement	92
5.3	NDP goals and objectives	93
5.4.1	Improved service delivery in the local government sphere	94
5.4.2	Improved governance and performance of public entities.....	96
5.4.3	An ethical, capable and professional public service	96
5.4.4	Digital transformation across the state	98

5.4.5	Mainstreaming of gender, empowerment of youth and persons with disabilities.....	99
5.4.6	A reformed, integrated and modernised Criminal Justice System.....	100
5.4.7	Effective border security	100
5.4.8	Secured Cyber Space	101
5.4.9	Increased feelings of safety of women and children in communities.....	101
5.4.10	Combat priority offences (economic, organised crime and corruption).....	102
5.4.11	Advance South African foreign policy for a better world	103
5.4.12	Enhanced peace and security in Africa	103
5.5	Key enablers and interlinkages	104
5.6	Key risks and mitigations.....	105
5.7	Partnerships and contributions of the non-state sector	106
5.8	Summary	107
CHAPTER 6	IMPLEMENTATION, MONITORING AND EVALUATION.....	109
6.1	Introduction	109
6.2	Building on lessons from practice	109
6.3	Policy coherence and priority setting.....	110
6.4	Alignment of planning and budgeting systems.....	111
6.5	Resource mobilisation	112
6.6	Institutional arrangements for effective delivery.....	113
6.7	Monitoring, reporting and evaluation of the MTDP	115
6.8	Summary	116
ANNEXURE A – Results Framework for Strategic Priority 1: Drive Inclusive Growth and Job Creation	118

Foreword by the President of the Republic of South Africa

Honourable Mr Matamela Cyril Ramaphosa

The Medium Term Development Plan (MTDP) 2024–2029 is an outcome of a participatory process that has been one of the definitive hallmarks of our 30 years of democracy. It is an output of an inclusive process that takes different perspectives into consideration and fuses the divergent ideologies that are prevalent in our society into a whole. In the main, it translates the will of the people into a practical programme of action that seeks to improve people's lives.

The people of South Africa have expressly indicated their will for different political parties to set aside their differences and work together to build the country, grow the economy, create jobs, provide decent human settlements, quality education and health, reliable supplies of water and electricity and drastically reduce poverty and inequality. South Africans of all races and creeds want to live in a prosperous South Africa, in a country that values their livelihood and protects them from undue harm. These aspirations find resonance in the National Development Plan (NDP) Vision 2030, United Nations Sustainable Development Goals (SDGs), the Africa Agenda 2063 and the Regional Indicative Strategic Development Plan (RISDP) of the Southern African Development Community (SADC).

The MTDP 2024–2029 shows that we have a deep appreciation of the challenges that continue to bedevil the nation's populace. We have a responsibility to honour the trust bestowed on us by the electorate on 29 May 2024 during the national general elections and ensure that these aspirations are realised and improve people's lives.

We are happy that ten political parties heeded the call to work together in the service of the people and implement these developmental imperatives under the banner of a Government of National Unity (GNU). These political parties realise that the challenges we face as South Africans require that we work together and mobilise the rest of society to play a part in ensuring that we leave no one behind.

The ten political parties formalised the GNU through a Statement of Intent in which they made a firm commitment to respect the Constitution and the rule of law, and promote accountability, transparency, integrity and good governance. Through the Statement of Intent, the political parties also agreed to work towards rapid, inclusive and sustainable economic growth; the creation of a more just society; the stabilisation of local government and the promotion of effective cooperative governance. They want to see government investing more in people through education, skills development and affordable quality healthcare.

The GNU will pursue every action that contributes to sustainable, rapid economic growth and remove every obstacle that stands in the way of growth. Growth must be inclusive and transformational and must drive the redistribution of wealth and opportunity.

Inclusive growth demands that we affirm the position of women and youth in the economy and remove the social, economic, cultural and other barriers to the full participation of persons with disabilities and other vulnerable groups in the economy.

For this to happen, all parties are aware that there is a need to build state capacity and create a professional, merit-based, corruption-free and developmental public service; to strengthen law enforcement agencies to address crime, corruption and gender-based violence; and to reinforce national security capabilities. All GNU members have committed to strengthening social cohesion, nation-building and democratic participation, all and undertake common programmes against racism, sexism, tribalism and other forms of intolerance.

The Statement of Intent binds us all to promote foreign policy based on human rights, constitutionalism, the national interest, solidarity and the peaceful resolution of conflicts to achieve the Agenda 2063, South-South, North-South and African cooperation, multilateralism and a just, peaceful and equitable world.

The successful implementation of the MTDP 2024–2029 will largely depend on sustained collaboration across all three spheres of government. It is imperative that we build on the progress we have made in the past 30 years to deepen democracy and improve people's lives. In recent times, the economy has shown signs of improvement, and the cost of living is gradually declining. We are making efforts to ensure consistent a supply of electricity. Since the announcement of the Energy Action Plan (EAP) in July 2022, we have made tremendous progress in reducing the severity of loadshedding.

The MTDP 2024–2029 will be supported by an effective, integrated and comprehensive poverty alleviation strategy to provide protection and support to the most vulnerable in society. We have supported the unemployed through a variety of interventions. In recent times we signed the Basic Education Laws Amendment Bill into law to mainstream the education system and ensure that all children have equal opportunity to acquire quality education. It is important that all children are empowered with quality education to enable them to fully participate in the economy. We have dedicated resources to capacitate law enforcement agencies to deal with the temptation to be corrupt and build safer communities. Efforts to professionalise the state are afoot as we attempt to build a capable, ethical and developmental state.

We showed during the COVID-19 pandemic that collaboration is a great catalyser that can catapult delivery and impact in society. We invite the whole of society to support the implementation of the MTDP 2024–2029 and ensure that we reach all corners of our country.

NOT FOR DISTRIBUTION

Foreword by the Minister of Planning, Monitoring and Evaluation

Honourable Ms Maropene Ramokgopa

The adoption of the Medium Term Development Plan (MTDP) 2024–2029 provides a clear pathway for the 7th Administration to build an inclusive society and deliver on the National Development Plan (NDP) Vision 2030's aspiration for the elimination of poverty and the reduction of unemployment and inequality. This MTDP 2024–2029 is an output of broad research efforts, consultations with various stakeholders across society and alignment with developmental priorities.

Earlier, the Department of Planning, Monitoring and Evaluation (DPME) produced a comprehensive 30-Year Review Report of South Africa's democratic governance. The report aptly captured some of the key developmental interventions and challenges and helped shape the key priorities for the 7th Administration. This data was supported by the numerous research outputs by the National Planning Commission (NPC) which serves as an independent advisory body for the President. As a think tank, the NPC greatly assists government and society with a wealth of research outputs on the implementation of the NDP.

The DPME also conducted broad consultations with relevant stakeholders to ensure that the final MTDP 2024–2029 reflects the will of the people, is in line with the spirit of inclusivity, and further enhances integrated planning in government. An integrated planning system is crucial in nurturing a coherent implementation programme of government and alignment with key priorities. The country's planning system is vital in building a capable, ethical and developmental state and achieving our development goals. The DPME has made important strides in strengthening integrated planning and improving harmonisation of planning and synergies across the state machinery.

Following an extensive diagnostic study on the state of planning, the DPME, in consultation with stakeholders, developed the Policy Framework for Integrated Planning (PFIP) that was adopted by Cabinet for implementation in 2022. The policy framework and its implementation plan build on progress made in institutionalising planning and seek to address gaps such as the fragmentation of planning, inadequate capabilities and ensure improved coordination and the modernisation of the planning system towards the achievement of development and better results. This includes ensuring the mainstreaming of the rights of women, youth and persons with disabilities in the planning system to achieve an inclusive society and economy and leave no one behind.

To institutionalise the MTDP 2024–2029, the DPME will also be guiding the development of the Strategic Plans (SPs) and Annual Performance Plans (APPs) of national and provincial governments. This will be done through issuing guidelines and circulars and assessing the draft institutional plans of national departments for alignment with the priorities of the 7th Administration.

Building on the government-wide Electronic Quarterly Performance Reporting System (eQPRS), the DPME has initiated a process towards modernising and automating planning. This is intended to improve the efficiency of the planning system and alignment across different planning instruments and use new technology, including artificial intelligence (AI), more effectively in the planning system.

The evolution of the planning system in South Africa and beyond has shown that planning without adequate resource allocation has little impact in advancing the development agenda. As a result, the DPME will develop the Budget Prioritisation Framework (BPF) annually to facilitate the alignment of planning priorities and the national budget process.

The MTDP 2024–2029 will be supported by an integrated and robust monitoring system that will be underpinned by the latest technologies. The DPME intends to track progress in the implementation of the key indicators in real time and produce bi-annual and mid-term reports to advise Cabinet and the President on the performance of specific sectors. Efforts are being made to establish a dashboard that will give the President overall sight of the performance of government. This will significantly assist in decision-making and ensure the speedy resolution of bottlenecks in the implementation process.

As part of DPME's reorientation to better support the priorities of the 7th Administration, the Department will start a process to update the National Evaluation Policy Framework (NEPF). The new NEPF will inform the development of the next National Evaluation Plan and the Research Agenda to cover the period of the MTDP 2024–2029. We call on all stakeholders to collaborate with the DPME and ensure that its priorities and outcomes are realised.

Executive summary

Introduction

South Africa has made significant strides since 1994 in establishing a non-racial, non-sexist, united society and improving the lives of all who live in it. South Africa has established a democratic state guided by a progressive Constitution and a system of institutions that aim to translate its values into practice. The nation has made progress in reducing poverty, extending basic services to reach the majority of South Africans, advancing fundamental rights as encapsulated in the Bill of Rights and establishing a dynamic economy that is substantially transformed from the apartheid era.

Nevertheless, as the country marks 30 years of democracy, it faces unprecedented social and economic challenges. The economy has not grown at a rate fast enough to create jobs for all those of working age. Too many South Africans are excluded from economic opportunity, and access to education, healthcare and other basic services remains unequal.

At this historic juncture, South Africa must entrench constitutional democracy and the rule of law, build an inclusive and growing economy, and root out corruption in all its forms. The people of South Africa will work together to achieve a new era of peace, justice and prosperity for all.

The 7th Administration commits to upholding the fundamental principles agreed to by the ten political parties in the Statement of Intent of the Government of National Unity (GNU):

- Respect for the Constitution, the Bill of Rights, a united South Africa, and the rule of law;
- Non-racialism and non-sexism;
- Social justice, redress and equity, and the alleviation of poverty;
- Human dignity and the progressive realisation of socio-economic rights;
- Nation-building, social cohesion and unity in diversity;
- Peace, stability and safe communities, especially for women and children;
- Accountability, transparency and community participation in government;
- Evidence-based policy and decision-making;
- A professional, merit-based, non-partisan, developmental public service that puts people first; and
- Integrity, good governance and accountable leadership.

It will further pursue the following shared objectives outlined in the Statement of Intent:

- Realising rapid, inclusive and sustainable economic growth, the promotion of fixed capital investment and industrialisation, job creation, transformation, livelihood support, land reform, infrastructure development, structural reforms and transformational change, fiscal sustainability and the sustainable use of South Africa's national resources and endowments. Macroeconomic management must sustainably support national development goals;
- Creating a more just society by tackling poverty, spatial inequalities, food security and the high cost of living, providing a social safety net, improving access to and the quality of basic services, and protecting workers' rights;
- Stabilising local government, effective cooperative governance, assigning appropriate responsibilities to the three government spheres and reviewing traditional leadership's role in the governance framework;
- Investing in people through education, skills development and affordable quality healthcare;
- Building state capacity and creating a professional, merit-based, corruption-free, developmental public service and restructuring and improving state-owned entities (SOEs) to meet national development goals;
- Strengthening law enforcement agencies to address crime, corruption and gender-based violence, and strengthening national security capabilities;
- Strengthening the effectiveness of Parliament in respect of its legislative and oversight functions;¹
- Strengthening social cohesion, nation-building and democratic participation, and undertaking common programmes against racism, sexism, tribalism and other forms of intolerance; and
- Creating foreign policy based on human rights, constitutionalism, the national interest, solidarity and peaceful resolution of conflicts to achieve the Agenda 2063, South-South, North-South and African cooperation, multilateralism, and a just, peaceful and equitable world.

The main objective of the Medium Term Development Plan (MTDP) 2024–2029 is to strategically guide the work of the 7th Administration to achieve the goals set out in the Statement of Intent of the GNU and the National Development Plan (NDP).

Through this plan, South Africa will complete the transformation of its energy and logistics systems to make them more efficient and competitive. More rapid and inclusive growth will be driven by the country's advantage in the green and digital economy, as well as in other fast-growing, labour-intensive and export-oriented sectors. Public institutions will be strengthened and the delivery of basic services like water and sanitation, healthcare and education improved. Law enforcement agencies will be equipped to tackle violent

¹ Note that Parliament is an independent institution to which the aims and objectives of the MTDP do not apply.

crime and corruption. Spatial inequality will be addressed through a revitalised housing and transport policy that enables people to access economic opportunities. Support will be expanded to the unemployed via public employment and social protection.

This is the vision of '*Building a nation that works for all*', a vision of a society in which there is dignified work for all, the latent energy and potential of the economy are unleashed, social protection is sufficient to provide support to those in need, and growth is rapid, inclusive and sustainable.

National development planning

The NDP has three main aims for 2030: eliminate poverty, reduce inequality to a Gini coefficient of 0.6, and reduce unemployment to 6%. Employment is a critical enabler to achieving these goals and a target of creating 11 million additional jobs between 2012 and 2030 has been set. For the country to reach these ambitious goals, the NDP recognises that South Africa requires sustained economic growth and a restructuring of the economy and sets the achievement of an average annual growth rate of 5.4% in real gross domestic product (GDP) as a critical enabling goal.

Recent reviews have shown that these targets are unlikely to be met by 2030. Some of the worst impacts of poverty have, however, been substantially mitigated by the expansion of the social wage, including through social grants and the expansion of access to basic education and healthcare.

Demographic changes in the country pose both opportunities and threats. The continued rapid growth of the population offers a potential 'demographic dividend' as more young people join the labour market. This can, however, also be a liability if there are constraints to economic inclusion and employment. While basic services are more widely available, a large part of the population still lives in dysfunctional settlements with weak local administrations and distant from economic opportunities.

South Africa must also contend with an increasingly challenging global environment. Globalisation is fracturing in response to political trends in rich countries towards more nationalist policies as they contest the growing political and economic strength of the Global South. This occurs at a time when the world's countries need to work together to address climate change, new pandemics and technological evolution.

While South Africa still has capacity in many of these areas, a coordinated response requires competent and adequately resourced institutions that can meet emerging challenges with a forward-looking view that drives economic and social inclusion and development. The state's suite of planning processes now includes scenario planning to ensure that its development is resilient and adaptable to changing circumstances.

The MTDP 2024–2029 is one element of that planning process, focusing on the 7th Administration. The objective of the plan is to put the country on a path to meet its development goals and to keep it on track. To achieve this objective, the MTDP 2024–2029 considers various recent analyses of South Africa’s performance.

Strategic approach

The MTDP 2024–2029 aligns with the goals and objectives of the NDP and the minimum programme of priorities of the GNU. The NDP remains South Africa’s long-term country plan towards 2030 and is aligned with its international commitments. The MTDP 2024–2029 is the medium-term development plan towards the achievement of the NDP, replacing the Medium Term Strategic Framework (MTSF) by aligning with international naming conventions and emphasising development outcomes.

Government has set five goals for the next five years, which are:

- A dynamic, growing economy;
- A more equal society, where no person lives in poverty;
- A capable state delivering basic services to all citizens;
- A safe and secure environment; and
- A cohesive and united nation.

To achieve these goals, the MTDP 2024-2029 identifies three Strategic Priorities which will be implemented across the state:

- Strategic Priority 1: Drive inclusive growth and job creation.
- Strategic Priority 2: Reduce poverty and tackle the high cost of living.
- Strategic Priority 3: Build a capable, ethical and developmental state.

These three Strategic Priorities, with a set of policy choices and priority interventions, will be implemented across all government and overseen and monitored by the centre of government. This approach aims to focus effort and resources behind an ambitious but achievable set of goals that can drive delivery while presenting a clear vision for the society we want to create. While they do not displace other programmes and commitments, they are essential to the economic growth agenda and should be prioritised for immediate implementation. This approach also requires collaboration with non-state role players, including business, labour and civil society.

Strategic Priority 1 focuses on rapid, inclusive and sustainable economic growth to create jobs and serves as the Apex Priority. Strategic Priority 2 aims to reduce poverty and tackle the high cost of living, and ensure that social assistance is leveraged for local economic development. Strategic Priority 3 aims to build a capable,

ethical and developmental state, which is critical for the success of the other two Strategic Priorities. The rights of women, youth and persons with disabilities (WYPD) must be mainstreamed across all three priorities.

Strategic Priority 1: Drive inclusive growth and job creation

Inclusive growth and job creation is the Apex Priority for the 7th Administration. All spheres of government, clusters and sectors must prioritise interventions to stimulate more rapid and inclusive growth. The MTDP 2024–2029 focuses on nine outcomes to achieve this Strategic Priority:

- Increased employment and work opportunities;
- Accelerated growth of strategic industrial and labour-intensive sectors;
- Enabling environment for investment and improved competitiveness through structural reforms;
- Increased infrastructure investment, access and efficiency;
- Improved energy security and a just energy transition;
- Increased trade and investment;
- A dynamic science, technology and innovation ecosystem for growth;
- Supportive and sustainable economic policy environment; and
- Economic transformation and equitable inclusion of women, youth and persons with disabilities for a just society.

Rapid, inclusive and sustained economic growth is essential for the five goals of government. A growing economy means more jobs, reduced poverty and greater revenues to support expanded social spending. Inclusive growth promotes social cohesion and reduces crime. Achieving more rapid growth requires focusing on conditions to increase private sector investment, innovation, productivity and international competitiveness. In the medium term, a target of 3.0% real GDP growth will be required by 2029 to support a sustained increase in employment.

Inclusive growth entails leaving no one behind. Key objectives include improved general living standards, improved incomes and material conditions, especially for the most marginalised and vulnerable in South African society. It also requires a significant change in the unequal pattern of ownership of economic assets and access to economic opportunities. To achieve this, accelerated interventions for redress, economic empowerment, and spatial transformation in favour of previously marginalised groups will be required. Deliberate efforts to significantly increase the economic participation of WYPD are pivotal and economic inclusion through employment and pathways to sustainable livelihoods must be strengthened. Active support and access to finance, markets and public procurement opportunities for WYPD must be given.

A key focus of Strategic Priority 1 is to create jobs and make substantive progress towards reducing unemployment to 6% by 2030. A multi-pronged approach must strengthen job creation in the private sector through supporting labour-intensive sectors and protecting and growing the existing industrial base, while also expanding public employment and active labour market programmes.

Since its establishment in October 2020, the Presidential Employment Stimulus (PES) has created earning opportunities for more than 2 million people through a variety of programmes and enabled institutional innovation and systems development. In addition to this, public employment programmes must be expanded and reformed to improve their impact.

Government will continue to support the Presidential Youth Employment Intervention (PYEI), the centrepiece of which is SAYouth.mobi, a zero-rated platform that keeps young people moving towards achieving sustainable incomes. More than four million unemployed young people have registered on the platform, with more than one million receiving opportunities for learning and earning. This network will be institutionalised through the SA Youth Trust for greater public-private collaboration in tackling youth unemployment.

The strategy to drive inclusive growth is centred on continuing structural reforms, upgrading and expanding network infrastructure and repositioning state-owned enterprises (SOEs). Operation Vulindlela, supported by far-reaching legislative, institutional and policy changes, has addressed long-standing constraints. The Operation Vulindlela approach will be strengthened and sustained.

Industrial policy will be a key role in driving growth, including through accelerated implementation of sector Master Plans to reverse de-industrialisation and accelerate growth in labour-intensive sectors such as construction, tourism, and sub-sectors of manufacturing and agriculture. Industrial policy incentives must be results-based and linked to clear measures of performance, and targeted at sectors with the best potential to create jobs at scale.

In recent decades, technological advances have made manufacturing more capital-intensive and less labour-absorbing. Over the next five years, South Africa must accelerate growth through massive new investment in the energy sector by leveraging its unique solar and wind resources to reduce energy costs and power green manufacturing as a driver of growth and job creation.

The application of the Just Transition Framework, Just Energy Transition Investment Plan (JET IP) and JET Implementation Plan will be prioritised and accelerated. Climate change is a shared global challenge with significant short-, medium-, and long-term socio-economic implications. The challenge must be met by supporting inclusive economic development and poverty reduction.

South Africa must leverage its well-established international relations to deliver economic outcomes through inward foreign direct investment (FDI), growth in export markets, tourism and cultural industries, knowledge and access to technology. Economic relationships with competing global power blocs must be maintained while simultaneously promoting interests in Africa. The country's economic diplomacy capabilities must be navigated and international relations leveraged.

Strategic Priority 2: Reduce poverty and tackle the high cost of living

The MTDP 2024–2029 focuses on six outcomes to achieve the goals and objectives of Strategic Priority 2 in reducing poverty and tackling the high cost of living:

- Reduced poverty and improved livelihoods;
- Improved coverage of social protection;
- Improved access to affordable and quality healthcare;
- Improved education outcomes and skills;
- Skills for the economy; and
- Social cohesion and nation-building.

Approximately 30.3 million South Africans (55.5% of the population) live in poverty, as defined by the national upper-bound poverty line. Of this, a total of 13.8 million people (25% of the population) experience food poverty. An extensive social protection system is therefore necessary to avert destitution for more than half of the South African population.

Progressively realising social protection for all South Africans is a requirement of the Constitution and Bill of Rights, which places the responsibility on government and society to ensure that citizens, especially the most vulnerable, are provided with a basic level of public services and support.

In addition to social grants, the government has since 1994 provided free basic services, healthcare, education and subsidised housing to poor South Africans. When debt service costs are excluded, approximately 60% of the government's budget is spent on the social wage. Success includes the percentage of people aged 20 or above who completed secondary education that more than doubled from 16% in 1996 to 38% in 2022. Households living in formal houses increased to 89% in 2022, from 65% in 1996. More than 80% of South Africans now have access to piped water at home or in their yards and 90% of people have access to electricity, up from 58% in 1996.

Nevertheless, a significantly greater effort is required to make a dent in poverty and accelerate progress towards the NDP goals. Substantial public investment in employment creation and social protection will be

necessary as part of a broader economic growth strategy and will require a reprioritisation of expenditure to accommodate increases on social spending and direct transfers while ensuring fiscal sustainability. Government will pursue both these imperatives simultaneously.

The Social Relief of Distress (SRD) Grant has closed a gap in the social protection system for unemployed working-age adults and has played a crucial role in supporting those who are unemployed and in mitigating extreme poverty. Given its significant impact in alleviating extreme poverty, the government will progressively expand and improve the SRD Grant as the basis for a future basic income grant for the unemployed. The design of the grant will be enhanced to link grant recipients to opportunities for employment and provide them with support for job searches and other forms of productive activity.

In addition to social protection and active labour market programmes, a renewed focus on spatial transformation must prioritise cities as engines of growth and centres of economic dynamism, and support the viability of rural areas as sustainable centres of development. The potential economic and social impacts of spatial transformation must be optimised through support for small, medium and micro enterprises (SMMEs), cooperatives and village enterprises, particularly those owned by WYPD. Further progress must be made in building sustainable human settlements and addressing asset poverty through improving access to land, housing and title deeds.

This Strategic Priority includes improving the quality of basic education and increasing the availability of post-school training opportunities for young people to develop skills and access productive livelihoods. Current levels of youth unemployment reflect the 44% of youth not in employment, education or training (NEET) status, in part due to the limited availability and poor quality of post-school opportunities for those who do not qualify for university entrance. Decisive action is necessary to ensure a cohort of trained young people who can participate in a growing economy.

Finally, an integral element of social protection is that citizens must be assured of universal access to an acceptable level of healthcare. The National Health Insurance (NHI) is a critical but complex initiative and its implementation will be a high priority for the 7th Administration. An early step will be to establish the mechanisms to engage all critical public and private stakeholders in the phased design, implementation and oversight of the new system. There is potential for stakeholder partnerships to reduce the relative cost of private medical care and support the development of improved human capacity and systems in the public health sector.

South Africa remains committed to accelerating progress on women's, children's and adolescents' health and wellbeing in line with sustainable development goals (SDGs).

Strategic Priority 3: Build a capable, ethical and developmental state

Twelve outcomes were identified to achieve the goals and objectives of Strategic Priority 3: Build a capable, ethical and developmental state:

- Improved service delivery in the local government sphere;
- Improved governance and performance of public entities;
- An ethical, capable and professional public service;
- Digital transformation across the state;
- Mainstreaming of gender, empowerment of youth and persons with disabilities;
- A reformed, integrated and modernised Criminal Justice System;
- Effective border security;
- Secured cyber space;
- Increased feelings of safety of women and children in communities;
- Combat priority offences (economic, organised crime and corruption);
- Advance South African foreign policy for a better world; and
- Enhanced peace and security in Africa.

Achieving the first two Strategic Priorities will require a capable state that can deliver on the country's developmental objectives. Effective policy making requires clear vision and priorities, robust and adaptable institutions of decision-making, and the capacity to implement these.

Significant progress has been made since 1994 to restructure and transform the public service. Some challenges remain and include an emphasis on compliance at the expense of delivery, fragmented structures, weak technical capacity, a focus on process rather than on outcomes and a failure to promote and reward innovation and success.

During the past decade, these challenges were exacerbated by widespread corruption, the capture of the state by criminal networks, the erosion of policy and implementation capacity at the centre of government, the influence of patronage networks on senior appointments, and an exodus of skills and expertise from the public service. As a result, the ethical foundations of the state were eroded while the state's capability to deliver on complex projects and objectives was weakened.

The long-term consequences of state capture for many institutions that manage public services have been disastrous for the economy and the state's ability to deliver to its citizens. The MTDP 2024–2029 identifies outcomes and priorities to complete reforms to the criminal justice system, including interventions to ensure further progress in the fight against Gender-based Violence (GBV) and Gender-based Violence and Femicide

(GBVF). All three spheres of government should support an effective and efficient developmental state and economy that serves all South Africa's citizens.

Measures to improve the quality of public services include interventions through the Public Service Commission (PSC) and the National School of Government (NSG). Reforms to administrative arrangements have also been introduced. The Office of the Head of the Public Administration (HOPA) will be established to provide for the Director-General in the Presidency to manage appointments and career progression for senior public servants.

Given its advanced infrastructure and other key advantages, South Africa can position itself as a major player in the digital economy by creating jobs in business process outsourcing and digital services while encouraging a dynamic ecosystem for high growth digital start-ups.

Finally, bold and urgent intervention is needed to improve local government service delivery. Interventions to date have been disparate and poorly coordinated, with limited effect. Initiatives such as the District Development Model (DDM) do not directly address the lack of capacity or governance failures at a municipal level. This Strategic Priority outlines specific interventions to address local government challenges.

Conclusion

As outlined in the NDP and the GNU Statement of Intent, this MTDP 2024–2029 presents the priority interventions that are required to address the most critical challenges confronting South Africa over the next five years. The overriding priority is to achieve more rapid, inclusive and sustained economic growth while implementing interventions to address poverty and inequality. These interventions will consider the imperative of fiscal consolidation and the need to carefully prioritise limited resources and improve efficiency to achieve the outcomes identified. Success will be achieved by prioritising and implementing priorities and ensuring that the objectives are met through effective oversight. The three Strategic Priorities in this plan are interrelated and interlinked. Strengthening the capability of the state will support economic growth, which will in turn increase the resources available, allowing expansion of social protection and other forms of support. The interventions outlined in this plan must be implemented in full to achieve these goals over the next five years.

CHAPTER 1

**BUILDING A NATION
THAT WORKS FOR ALL**

CHAPTER 1 BUILDING A NATION THAT WORKS FOR ALL

1.1 Introduction

The Medium-Term Development Plan (MTDP) 2024–2029 is introduced at a pivotal moment in South Africa’s history, as no political party secured enough seats in the national general election on May 29, 2024, to form a majority government. The establishment of the Government of National Unity (GNU) provided a path forward. In its Statement of Intent, the GNU committed to ensuring stability and peace, addressing the triple challenges of poverty, unemployment, and inequality, upholding constitutional democracy and the rule of law, and building an inclusive South Africa for all its citizens. The GNU also pledged to adhere to a set of Foundational Principles and a basic Minimum Programme of Priorities that stem from the manifestos of its participating parties.

The MTDP 2024-2029 aligns with the GNU's Statement of Intent and the National Development Plan (NDP): Vision 2030 by outlining the Strategic Priorities of the 7th Administration. It details a programme of interventions and targets for the current term of government. In support of these objectives, the MTDP 2024–2029 serves as a strategic response to the economic and social challenges currently faced by South Africans. While it identifies three Strategic Priorities, it emphasises the economy as the primary enabler for achieving developmental goals. A whole-of-government and whole-of-society approach is crucial for the success of this plan.

1.2 Background

The review of the Medium Term Strategic Framework (MTSF) 2019–2024 and the associated planning methodologies led to the transition from the MTSF to the MTDP 2024-2029. The MTSF review noted that medium-term development plans should be more closely linked to longer-term development outcomes. The MTDP thus builds on the outcomes of the NDP, while also accounting for the electoral mandate of the GNU. South Africa requires a forward-looking and strategic perspective to respond appropriately to several challenges that affect development outcomes in the context of an increasingly difficult global political and economic environment and to take advantage of the opportunities for social and economic development.

Eradicating poverty and reducing inequality and unemployment remain the overriding goals of government. Rapid, inclusive, and sustainable economic growth and job creation are thus the primary focus for the 7th Administration. Since 2019 South Africa has implemented a range of structural reforms to remove growth-restricting constraints, attract higher levels of investment, and make the economy more efficient and

competitive. These reforms included an overhaul of the energy sector to enable efficiency, stability and greater investment in electricity generation and introduce a more competitive electricity market. Private sector participation in the operation of port terminals was introduced, open access to the freight rail network was enabled, and the auction of high-demand broadband spectrum was completed. While the value of public-private partnerships (PPPs) is acknowledged, the state will continue to play a strategic role in the development and ownership of public infrastructure in the interest of all its people.

To realise higher economic growth and create more jobs, South Africa needs a combination of far-reaching structural reforms, increased investment, and sound macroeconomic management. The Strategic Priorities and supporting interventions as outlined in the MTDP 2024–2029 will reform the economy and bolster the capacity of the state. In combination, these will raise business confidence and increase investment towards accelerated economic growth.

Government cannot address developmental challenges alone. It will require cooperation with social partners such as business, labour and civil society to improve the lives of South Africans. The strategic direction to achieve rapid, inclusive, and sustainable economic growth that will create jobs during the implementation of the MTDP 2024–2029 will be realised by deepening partnerships between government, business, labour, and civil society; accelerating structural reforms; continuing the work to strengthen state capacity; improving the operation of state-owned enterprises (SOEs); and ensuring a safe and secure environment for citizens and business.

The 7th Administration will continue to sustain the momentum of reforms while building inclusivity as articulated in the NDP and the Statement of Intent.² A capable, ethical, and developmental state committed to economic reform will enable the country to build an inclusive and growing economy that will benefit all South Africans.

Any plan is only as good as the implementation mechanisms that support it and the capacity to translate its commitments into reality. A key factor in the success of the MTDP 2024–2029 will be to enhance the implementation capacity of the state. Spearheaded by the Presidency and National Treasury, Operation Vulindlela is a mechanism to support the delivery of key priorities across government. The Operation Vulindlela methodology centres on carefully selecting priorities to ensure focus, supporting the delivery of those priorities with appropriate skills and expertise, ensuring effective and rigorous monitoring of progress, and, where necessary, rapid decision-making.

² GNU. 2024. 'Statement of Intent', 3–4.

In its first phase, Operation Vulindlela focused on economic reforms in the energy, logistics, telecommunications, and water sectors, as well as reforms to the visa system, as these are the binding constraints on growth. Going forward, the scope of Operation Vulindlela will expand to new areas such as strengthening the performance of local government, accelerating digital transformation and addressing spatial inequality. These are critical priorities to support more rapid and inclusive growth. The Operation Vulindlela methodology will be applied across all three Strategic Priorities in the MTDP 2024–2029.

1.3 Global developmental goals and objectives

Drawing from the NDP and analyses of performance in its implementation and taking the GNU Statement of Intent as its starting point, the MTDP 2024–2029 articulates the goals, strategic priorities, outcomes, and interventions that will inform and guide planning, resource allocation and implementation for the 7th Administration. While these are domestic concerns and priorities, they also align with South Africa's international commitments. South Africa accepted the Sustainable Development Goals (SDGs) as adopted by the United Nations (UN) in 2015. All 17 SDGs find resonance in South Africa's current developmental challenges and priorities. The SDGs are:

- No poverty;
- Zero hunger;
- Good health and wellbeing;
- Quality education;
- Gender equality;
- Clean water and sanitation;
- Affordable and clean energy;
- Decent work and economic growth;
- Industry, innovation and infrastructure;
- Reduced inequalities;
- Sustainable cities and communities;
- Responsible consumption and production;
- Climate action;
- Life below water;
- Life on land;

- Peace, justice, and strong institutions; and
- Partnerships for the goals.³

The African Union's (AU) 'Agenda 2063: The Africa we want' is the continental development framework to which South Africa is a signatory and aspires to achieve. Agenda 2063, adopted by the AU in 2015, sets seven aspirations for the African continent:

- A prosperous Africa, based on inclusive growth and sustainable development;
- An integrated continent, politically united and based on the ideals of Pan Africanism and the vision of African renaissance;
- An Africa of good governance, democracy, respect for human rights, justice, and the rule of law;
- A peaceful and secure Africa;
- An Africa with a strong cultural identity, common heritage, values and ethics;
- An Africa whose development is people-driven, relying on the potential offered by African people, especially its women and youth and caring for children; and
- An Africa as a strong, united, resilient, and influential global player.⁴

In 2020, South Africa and other Southern African Development Community (SADC) states signed the SADC Regional Indicative Strategic Development Plan (RISDP) 2020–2030, aiming to 'achieve sustainable and inclusive socio-economic development, through good governance and durable peace and security'. The plan covers five strategic areas:

- Peace, security and good governance;
- Industrial development and market integration;
- Infrastructure development in support of regional integration;
- Social and human capital development; and
- Cross-cutting issues: gender, youth, environment and climate change, and disaster risk management.⁵

The MTDP 2024–2029 thus incorporates regional, continental and international commitments.

1.4 National development planning

The NDP has three main aims for 2030: eliminate poverty, reduce inequality to a Gini coefficient of 0.6, and reduce unemployment to 6%. It recognises employment as a critical enabler to achieving these goals and sets a target of creating 11 million additional jobs between 2012 and 2030. For the country to reach these ambitious goals by the target date, the NDP recognises that South Africa requires sustained economic growth and a restructuring of the economy and sets the achievement of an average annual growth rate of 5.4% in real gross domestic product (GDP) as a critical enabling goal.

Recent reviews have shown that these targets are unlikely to be met by 2030. Some of the worst impacts of poverty have, however, been substantially mitigated by the expansion of the social wage, including through social grants and the expansion of access to basic education and health care.

Demographic changes in the country pose both opportunities and threats. The continued rapid growth of the population offers a potential 'demographic dividend' as more young people join the labour market. This can, however, also be a liability if there are constraints to economic inclusion and employment. While basic services are more widely available, the quality and affordability of these services is a challenge since a large proportion of the population still lives in dysfunctional settlements that are distant from economic opportunities and have weak local administrations.

South Africa must also contend with an increasingly challenging global environment. The process of globalisation is fracturing in response to political trends in rich countries towards more nationalist policies as they contest the growing political and economic strength of the Global South. This occurs at a time when the world's countries need to work together to address common crises, notably those related to climate change and the emergence of new technologies that threaten livelihoods.

Questions are being raised about not just the capacity of societies to address their multiple challenges but also about the limits of the ability of states to respond to all these emerging demands for action. While South Africa still has a demonstrated capacity in many of these areas, a coordinated response requires competent and adequately resourced institutions that foresee and are prepared to meet emerging challenges.

In this context, a forward-looking view is needed to enable the state and society to consider the emerging opportunities and threats, to prepare an appropriate response to them, and to drive social and economic inclusion and development. The state's suite of planning processes now includes using instruments such as scenario planning to ensure that its development is resilient and adaptable to changing circumstances.

The MTDP 2024–2029 is one element of that wider development planning process, focusing on what is required in the medium term. The objective of the plan is to put the country on a path to meet its development goals and to keep it on track.

1.5 Strategic approach to the MTDP 2024–2029

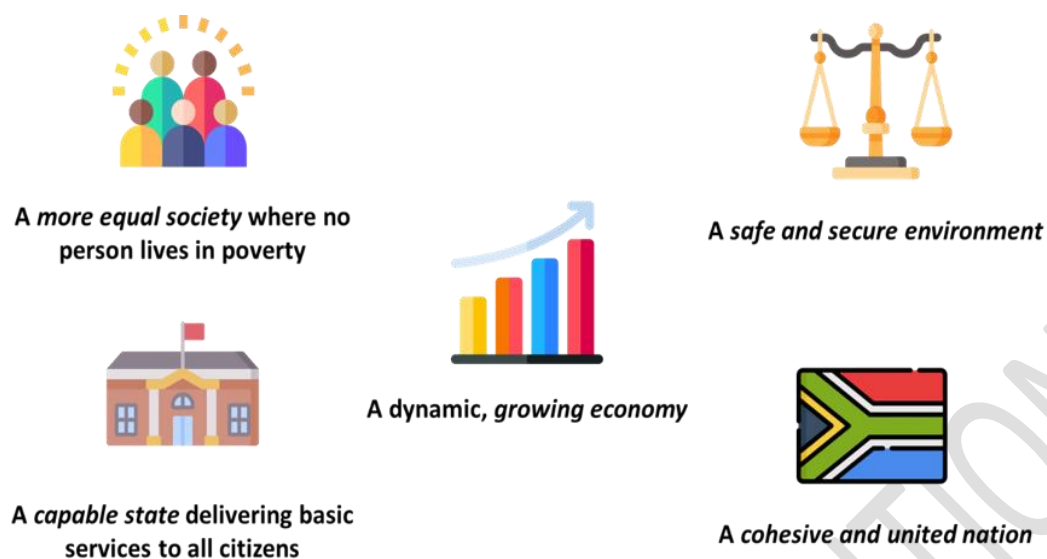

The MTDP 2024–2029 has been produced through a programme of inter-governmental collaboration with significant participation by non-state stakeholders. It is gender responsive and transformative and advances youth development and the rights of people with disabilities and children. It draws on multiple sources of knowledge, including the Indlulamithi Scenarios 2035, the 10-Year Review of the NDP by the National Planning Commission (NPC), the 30-Year Review of South Africa’s Democracy by the DPME and other monitoring reports and official statistics. These include the most recent census, sector strategies, research and evaluations, academic studies, implicit and explicit knowledge of government experts, and think tanks.⁶

The MTDP 2024–2029 is characterised by continuity and change. It is part of a continuum of government planning processes that includes the MTSFs and the NDP, but it is also different from other planning instruments in several ways. It employs a greater level of prioritisation of the various themes with which it deals, grouping numerous sectoral and departmental considerations to serve the three Strategic Priorities. It also gives a central place to the NDP and its reviews and the commitments in the Statement of Intent and is aligned with the NDP, Sustainable Development Goals (SDGs), African Union (AU) Agenda 2063, and the Southern African Development Community (SADC) strategic plan.

The MTDP 2024–2029 aligns with the goals and objectives of the NDP and the minimum programme of priorities of the GNU. The NDP remains South Africa’s long-term country plan towards 2030 and is aligned with its international commitments on the continent and globally. The MTDP 2024–2029 sets out five goals for the next five years. These are intended to guide the actions of government in pursuing the goals of the NDP.

Figure 1.1: Five goals of government

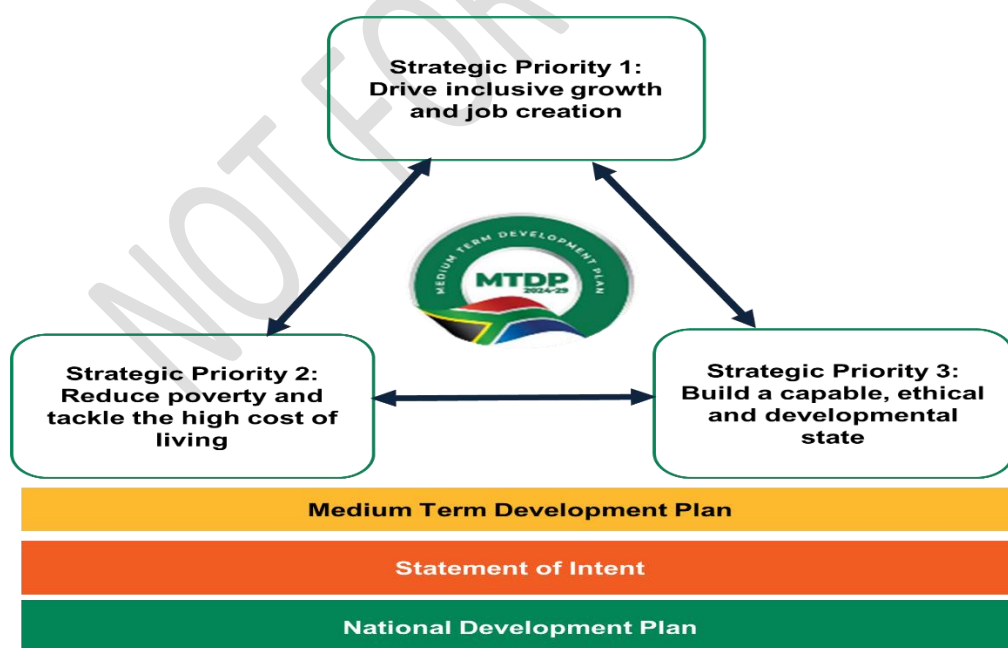

Source: The Presidency, 2024

To achieve these five goals, the MTDP identifies the following three Strategic Priorities that will be implemented across the state:

- Strategic Priority 1: Drive inclusive growth and job creation.
- Strategic Priority 2: Reduce poverty and tackle the high cost of living.
- Strategic Priority 3: Build a capable, ethical, and developmental state.

Figure 1.2: Three strategic priorities of the MTDP 2024-2029

Source: Department of Planning, Monitoring and Evaluation, 2024

These three Strategic Priorities, along with a set of policy choices and priority interventions, will be implemented across all of government and overseen and monitored by the centre of government. This approach aims to focus effort and resources behind an ambitious but achievable set of goals that can drive delivery while presenting a clear vision to all South Africans for the society we want to create. While these priority interventions do not displace other programmes and commitments across government, they are essential to the economic growth agenda and should be prioritised for immediate implementation.

1.5.1 Strategic Priority 1: Drive inclusive growth and job creation

Strategic Priority 1 is the Apex Priority in the MTDP 2024-2029. All spheres of government and public entities will prioritise interventions that enable sustainable inclusive growth. All spheres of government, clusters, and sectors must prioritise interventions aimed at stimulating more rapid and inclusive growth. The outcomes and interventions of this strategic priority are outlined in Chapter 3. Rapid, inclusive, and sustained economic growth is essential to achieve all five goals of government. A growing economy means more jobs, reduced poverty, and greater revenues supporting expanded social spending. Moreover, inclusive growth is necessary to promote social cohesion and reduce crime. Achieving more rapid growth requires government to focus on creating the conditions for increased private sector investment, innovation, productivity, and international competitiveness. In the medium term, a target growth rate of above 3.0% will be required by 2029 to support a sustained increase in employment.

Inclusive growth entails leaving no one behind. Key objectives in this regard include improved general living standards, improved incomes, and material conditions, especially for the most marginalised and vulnerable in South African society. Inclusive growth also requires a significant change in the unequal pattern of ownership of economic assets and access to economic opportunities. To achieve this, accelerated interventions for redress, economic empowerment, and spatial transformation in favour of previously marginalised groups will be required. Deliberate efforts to significantly increase the economic participation of women, youth, and persons with disabilities are pivotal in this regard, particularly since they represent the majority of the citizenry. In addition to strengthening economic inclusion through employment and pathways to sustainable livelihoods, active support for enterprises owned by women, youth, and persons with disabilities must be emphasised and their access to finance, markets, and public procurement opportunities improved.

1.5.2 Strategic Priority 2: Reduce poverty and tackle the high cost of living

Strategic Priority 2 seeks to reduce poverty and tackle the high cost of living. Its interventions provide a means through which South Africans can rise above poverty that has been passed down from one generation to the next. Approximately 30.3 million South Africans (55.5% of the population) live in poverty, as defined by the

national upper-bound poverty line. Of this, a total of 13.8 million people (25% of the population) experience food poverty. An extensive social protection system is therefore necessary to avert destitution for more than half of the South African population.

Progressively realising social protection for all South Africans is a requirement of the Constitution and Bill of Rights, which places the responsibility on government and society to ensure that citizens, especially the most vulnerable, are provided with a basic level of public services and support.

Since 1994, the government has used various mechanisms to redistribute resources towards the poor and to expand the social wage. In addition to social grants, the government has provided free basic services, healthcare, education and subsidised housing to poor South Africans. When debt service costs are excluded, approximately 60% of the government's budget is spent on the social wage.

The results of Census 2022 show the impact of these policies. For example, the percentage of people aged 20 or above who completed secondary education more than doubled from 16% in 1996 to 38% in 2022. Households living in formal houses increased to 89% in 2022, a huge rise from 65% in 1996. More than 80% of South Africans now have access to piped water at home or in their yards and 90% of people have access to electricity, up from 58% in 1996.

Nevertheless, a significantly greater effort is required to make a dent in poverty and accelerate progress towards the NDP goals. Substantial public investment in employment creation and social protection will be necessary as part of a broader economic growth strategy and will require a reprioritisation of expenditure to accommodate increases in social spending and direct transfers while ensuring fiscal sustainability. The government will pursue both these imperatives by maintaining a responsible fiscal trajectory on the one hand and providing sufficient support to protect the most vulnerable from hunger and extreme poverty simultaneously.

1.5.3 Strategic Priority 3: Build a capable, ethical and developmental state

Achieving the first two Strategic Priorities will require a capable state that can deliver on the country's developmental objectives. Several interventions that build the capability of the state will be outlined in Chapter 5. Effective policymaking requires a clear vision and priorities, institutions of decision-making that are robust and adaptable to ensure policy coherence and make choices when trade-offs occur, and the capacity to implement these consistently and effectively.

Following the first democratic elections in 1994, significant progress was made in restructuring and transforming the public service, along with the rapid expansion of service delivery to pursue the new developmental agenda of the state. At the same time, some challenges have proved difficult to address. These

include a growing emphasis on compliance at the expense of delivery, fragmented structures, weak technical capacity, a focus on process rather than on outcomes and a failure to promote and reward innovation and success.

During the past decade, these challenges were exacerbated by widespread corruption, the capture of the state by criminal networks, the erosion of policy and implementation capacity at the centre of government, the influence of patronage networks on senior appointments, and an exodus of skills and expertise from the public service. As a result, the ethical foundations of the state were eroded while the state's capability to deliver on complex projects and objectives has been weakened.

The long-term consequences of state capture for many institutions that manage public services have been disastrous for the economy and the state's ability to deliver in a manner that serves its citizens. To address this, this MTDP 2024–2029 identifies outcomes and priorities to complete reforms to the criminal justice system, including interventions to ensure further progress in the fight against Gender-based Violence and Femicide (GBVF). More generally, regulation and oversight are within the purview of all three spheres of government, which should work within their respective jurisdictions to support an effective and efficient developmental state and economy that serves all South Africa's citizens.

In support of the state's role, a continued focus on measures to improve the quality of public services has been developed. These include interventions delivered through the Public Service Commission (PSC) and the National School of Government (NSG). Reforms to administrative arrangements that draw a clear distinction between the roles and responsibilities of political and administrative leadership have also been introduced. The Office of the Head of the Public Administration (HOPA) will be established to provide for the Director-General in the Presidency to manage appointments and career progression for senior public servants as part of efforts to professionalise the public service.

1.6 Future scenarios to 2029 and beyond

The Indlulamithi Scenarios 2035 identified key driving forces (KDFs) that impact on possible futures of South Africa. The KDFs are based on factors that various role players believe could significantly influence South Africa's future development. The Indlulamithi Scenarios 2035 include 26 variables that determine the following three KDFs:

- KDF 1: Low economic growth trap;
- KDF 2: State weakness and declining democratic accountability; and
- KDF 3: Internal security threatened by anger, distrust and resistance to renewal.

These KDFs are integrated into the development of the MTDP 2024–2029. The slightly longer horizon of the Indlulamithi Scenarios 2035 is useful for planning beyond the medium term.

Figure 1.3 Indlulamithi Scenarios 2035

Source: Indlulamithi Scenarios, 2023

The Indlulamithi Scenarios paint three plausible futures for South Africa by 2035:

- *Hadedda Home – The recrimination nation.* This scenario is of a South Africa in which the state and society are in slow decline. No decisive action is taken to improve matters and blaming everyone for South Africa's ills has become common practice. Deep structural constraints in the economy and slow economic growth remain unresolved and 70% of South Africans say they do not trust politicians.
- *Vulture Culture – The desperation nation.* In this scenario, South Africa is governed by a populist coalition whose main objective is self-enrichment and patronage. Investor confidence has been eroded, the growth rate is low, unemployment is high at 44%, youth unemployment is at 63%, and poverty and inequality are extremely serious.
- *Weaver Work – The cooperation nation.* In this scenario, following disruptions and protests, there is a coming together of political parties, the state, the private sector, and civil society to jointly identify priorities and, by leveraging the strengths of each, change the forms of governance and reform the economy. This results in a more collaborative form of governance and accelerated reforms in the economy that attract greater investment and reduce unemployment, inequality, and poverty.

The *Weaver Work* scenario has been adopted as the preferred scenario for the MTDP 2024–2029.

1.7 Economic growth scenarios towards 2029

Three economic growth scenarios were analysed during the development of the MTDP 2024-2029: the *Business as Usual* (BAU) scenario, the *Growth Acceleration* scenario, and the *Social Policy and Equity Simulation* scenario. The MTDP 2024-2029 aims for a growth rate of above 3.0% by 2029.

The BAU scenario assumes that the structure of the economy will remain largely unchanged without implementing the structural reforms or interventions outlined in the MTDP. It projects an economic growth rate of 2.0% by 2029. At the same time, unemployment is projected to decrease to 29.9% in 2029.

The second scenario adopted in MTDP is the “*Growth Acceleration*” scenario. This scenario focuses on implementing structural reforms and interventions of the MTDP to achieve a target growth rate of above 3.0% by 2029. The scenario indicates that strategies aimed at supporting high-performing industrial sectors and prioritising job creation will make progress towards this goal. Under this scenario, unemployment is projected to decline by more than 4 percentage points, to below 28.0% by 2029.

The third scenario is “*Social Policy and Equity Simulation*” that examines the effects of increasing social grants, focusing on strategies that enhance economic participation in an economy projected to grow at 5.4%. In the final scenario, which considers the expansion of the social grant system to reduce the proportion of the population falling below the lower-bound poverty level. This scenario contributes significantly towards a reduction in unemployment and extreme poverty and reduces the Gini coefficient to 0.61. However, it achieves these outcomes only if it is financed from existing budget allocations rather than through increased deficits.

After examining the three growth scenarios and reviewing the global, continental and domestic economic and socio-economic landscape as well as key risks, the MTDP 2024-2029 adopted a target growth rate of above 3.0% by 2029 which targets the implementation of the structural reforms and interventions of the MTDP 2024-2029.

1.8 Key risks and mitigations

In developing various interventions, key risks and mitigation measures were identified. The identification of strategic risks was informed by multiple perspectives. Globally, this included insights from the World Economic Forum’s Global Risks Report 2024. At a national level, the Institute of Risk Management South Africa’s Risk Report 2024/2025 was also considered. The proposed mitigation measures stemmed from the recommendations of sector institutions and the contributions of a wide range of external experts who were consulted during the preparation of the plan.

One primary risk that affects all strategic priorities is political instability and the lack of consensus among political parties on key policy issues. To mitigate this risk, the formation of the GNU and its minimum programme of priorities of the Statement of Intent were established, along with robust governance structures and enhanced societal engagement. Economic risks include weak public-private partnerships, ineffective incentives, and complicated regulations. These challenges are being addressed by prioritising public-private partnerships (PPPs), refining incentives, simplifying regulations, and encouraging private sector involvement in public investments.

To address persistent inequality, it is essential to integrate marginalised groups into state programmes. The risks associated with social programmes include limited funding, increased demand on services due to population growth, and inconsistencies in basic income support implementation. These challenges can be mitigated through centralised leadership and coordinated social protection efforts. In terms of health interventions, risks involve the integration and funding of the National Health Insurance (NHI), which requires careful planning and effective public communication. Regarding education, the risks primarily stem from budget cuts that affect essential resources. To address this, there is a need for reprioritization and expanded implementation of Early Childhood Development (ECD) programmes.

Effective medium-term indicators, targets and resource allocation are essential for building a capable state. This process faces several risks, including challenges from a multi-party government, resistance to reform from local governments, geopolitical issues, and gaps in public sector professionalisation. To address these risks, mitigation strategies should include the GNU Statement of Intent, engagement with local stakeholders, enhanced diplomacy, and the implementation of the Professionalisation Framework. Additionally, reforms to the criminal justice system (CJS) may suffer from inconsistent implementation and political interference in prosecutions. Therefore, a comprehensive plan, interdepartmental collaboration, and safeguards to protect the independence of the National Prosecuting Authority (NPA) are necessary. Moreover, prioritising whistleblower protection and community-driven violence reduction is crucial.

1.9 Summary

The MTDP 2024–2029 has been developed to align with a broader sustainable development agenda, specifically the NDP and the GNU Statement of Intent. It emphasises three interrelated strategic priorities that are essential for achieving the nation's developmental objectives. Various economic scenarios have been analysed, and foresight and scenario planning have been employed to guide the formulation of the MTDP. Additionally, this plan utilises high-level national, sectoral, and sub-national data and evidence, along with existing interventions, and operates under a theory of change aimed at reaching the nation's developmental

goals. As a result, the MTDP 2024–2029 will direct initiatives designed to address South Africa's economic and socio-economic challenges, focusing on issues of poverty, inequality, and unemployment, particularly among the most vulnerable and impoverished. It also outlines strategies and interventions to achieve South Africa's developmental goals over the medium term. Chapter 2 includes an economic and socio-economic review, while Chapters 3 to 5 detail the strategic priorities, expected outcomes, and necessary interventions. Finally, Chapter 6 outlines the processes for implementation, monitoring, and evaluation of the MTDP 2024–2029 .

CHAPTER 2

ECONOMIC AND SOCIO-ECONOMIC REVIEW

CHAPTER 2 ECONOMIC AND SOCIO-ECONOMIC REVIEW

2.1 Introduction

This chapter provides an overview of the development planning context in South Africa, focusing on the development performance as evaluated in the 10-Year Review of the NDP and the 30-Year Review by the DPME. It further examines the current global political and economic context, particularly addressing the polycrisis affecting countries worldwide and its implications for South Africa. The chapter also highlights key strengths and weaknesses of South Africa in relation to this global landscape. Subsequently, the chapter assesses the country's economic performance looking at economic growth and unemployment and the chapter concludes by summarising socio-economic trends, looking at health, education, social development and human settlements. Overall, the chapter aims to provide a situational analysis of both global and domestic factors impacting South Africa's development.

2.2 Progress against the National Development Plan 2030

The NDP, as adopted in 2012, outlines South Africa's vision towards 2030. It remains the long-term country plan and its two main goals are to eliminate poverty and reduce inequality⁷ by lowering the Gini coefficient from 0.69 to 0.6.⁸ The MTDP 2024-2029 will continue to support these goals over the medium term. To achieve its outcomes, the NDP identifies two intermediate goals. The first is to increase employment by creating 11 million additional jobs between 2012 and 2030, to reduce the unemployment rate to 6% by 2030.⁹ The second objective is to achieve sustained economic growth of an annual average of 5.4% in GDP until 2030.¹⁰ South Africa is far from achieving its employment and growth targets by 2030 thereby directly impacting on achieving the poverty and inequality goals (see Table 2.1).

In 2023, the NPC undertook a 10-Year Review of progress made in the implementation of the NDP and outlined recommendations for its implementation towards 2030. The overall conclusion of the review highlighted that progress has been made in some areas but that South Africa was lagging on key development goals: the economy was still not inclusive and unemployment remained high; poverty and inequality have also remained high and persistent and the legacy of apartheid continues to undermine the potential of South Africa's people. The Review found that, although too slow and not always sustained, progress has been made on key aspects

of the NDP's social goals in education, health, and social protection. It notes progress regarding the expansion of social grants to cope with the effects of poverty and inequality – especially the SRD grant during and after the COVID-19 pandemic. There has been some improvement in education, mainly due to improved access to books for learners, a focus on learner assessment, and clearer pedagogical instructions to teachers. While several challenges remain in the health sector, including concerning trends in cases of HIV and TB, there have been significant improvements in life expectancy and decreases in infant mortality.

Table 2.1: Macroeconomic performance against the NDP targets

NDP target	Baseline	Target	2018	2021	2022	2023
	2012	2030	Actual	Actual	Actual	Actual
GDP growth (annual average %) ¹¹	3.3 (2011)	5.4	0.8	4.7	1.9	0.6
Reduce income inequality (Gini income measure)	0.69 (2009)	0.60	0.69	0.63	0.63	0.63
Eliminate poverty below LBPL (%)	36.4 (2011)	0	21.7	18.7	20.5	20.5
Investment (gross fixed capital formation) as percentage of GDP ¹²	17.6 (2010)	30	15.9	13.2	14.2	15.2
Public sector (state and state-owned entities) investment as percentage of GDP	6.8	10	5.7	3.8	4.1	4.3

Sources: All actual figures are sourced from the National Treasury Budget Review 2024, the Quarterly Labour Force Surveys published by Statistics South Africa, the South African Reserve Bank Quarterly Bulletins and World Bank Macro Poverty Outlook for South Africa.

The 30-Year Review identified several cross-cutting challenges that, if not addressed, will derail the country from achieving the national aspirations expressed in the NDP.¹³ It warns that social cohesion is threatened by

¹¹ SARB. 2024. 'Quarterly Bulletin: March 2024', March, <https://www.resbank.co.za/content/dam/sarb/publications/quarterly-bulletins/quarterly-bulletin-publications/2024/01Full%20Quarterly%20Bulletin.pdf>.

¹³ DPME. 2024. '30-year Review', 214.

disgruntlement over unmet expectations and perceptions of unfairness and unequal access to opportunity. These are associated with a potential for violent social unrest.¹⁴

The 30-Year Review makes numerous recommendations to accelerate the implementation of programmes, including to advance and empower women, youth, and people with disabilities. Acknowledging that relevant legislation and institutional frameworks are in place and key programmes have gathered momentum, improvements can be achieved with the appropriate level of resourcing, better coordination to reduce duplication and improve efficiency, and the scaling up of successful initiatives by partnering with non-state role players for a more inclusive society.

In response to outstanding issues, the NDP 10-Year Review concluded with a call to focus on four key areas of actions: growing an inclusive economy; improving state capacity; institutionalising planning; and strengthening international partnerships and trade. These four key actions have been integrated into key components of the MTDP 2024–2029.

The MTDP highlights that government will prioritise key actions to course correct towards positive attainment of the NDP goals. The quality of public spending will be improved through better planning, sound procurement systems aimed at securing quality goods and services, and greater competition and productivity. Greater efficiency in all areas of government expenditure is needed because the overall envelope is likely to grow relatively slowly over the medium term. This means reliance on fiscal policy alone will not mobilise the levels of investment required, underscoring the importance of mobilising private capital to achieve public goals.¹⁵

The NPC's review further pointed out that, while much of the NDP was essentially state-centric, there is a greater need for the state to work more closely with the private sector and civil society to support sector investment and innovation. The review called for a recalibration of efforts to confront the outlined harsh realities.¹⁶

The DPME's review presented a wider range of recommendations and identified 26 high-priority strategic thrusts to be prioritised when planning towards 2030 and beyond. These were a mix of legislative and policy processes, institutional reforms, scaling up successful programmes, and promoting potential new programmes. Identified interventions included rethinking the economic strategy to grow the economy; reconfiguring government to enhance delivery; accelerating infrastructure development; focusing industrial policy to achieve greater employment intensity; and reforming state-owned enterprises.¹⁷ In addition, wide-ranging

recommendations were made on education, training and skills development, research and development (R&D), the development of technological capabilities, and several other strategic policy areas.

2.3 Global economic context

The world is experiencing the combined effects of globalisation without adequate governance for the future. This situation has led to a range of new and escalating risks that are particularly challenging to manage, especially those that are existential and systemic. These crises are further complicated by the ongoing fragmentation of an already fragile and confrontational global order. We have entered the Anthropocene Epoch, which is the first period in history where human actions are the primary influence on the Earth and its ecosystems. This has resulted in the emergence of existential risks that have the potential to lead to the extinction of humankind or, at the very least, severely limit its potential.

The polycrisis is characterised by several global challenges: climate change and its associated risks to food security, health and social security; technological innovation whose impact is proving difficult to predict and control; artificial intelligence systems that have already made possible ever-more intelligent and destructive weapons systems and could result in huge job losses; the increasing frequency of pandemics and antimicrobial resistance; and breakthroughs in medicine, biotechnology and extractive developments such as deep sea mining that, despite offering immediate benefits, present potentially existential risks to humanity.

These challenges occur in a context of growing economic and geopolitical threats, including global economic crises; growing polarisation along ideological lines, especially with the consolidation of right-wing forces in many democracies, a trend that will find increasing expression in the Global South; rising geopolitical tensions, especially due to governments of major powers trying to elicit support from the Global South; and the weakening capacity of the state to provide for the needs of society.

The global polycrisis, together with these economic and geopolitical threats, poses serious challenges for South Africa, while simultaneously presenting certain opportunities. In particular, South Africa cannot evade the prime global risk, that of climate change which threatens South Africa's energy supply, food availability, economy and security. These effects are already manifesting and will strengthen over the medium term.

Concerning global geopolitics, a definite shift in political and economic power from West to East has occurred. Western states face increasing governance challenges, especially with the rightward shift in European and United States (US) politics, and their consequent impact on economies and western multilateral institutions such as the European Union. The US is increasingly inward-looking and has sought to distance itself from much of the rest of the world, including its allies, and delink from various multilateral treaties and other agreements

to which it is a party. Equally concerning is the increasingly polarised domestic environment in the US and North America in which racism and xenophobia are presented in some quarters as virtues, thereby threatening democracy in these countries. Similar political movements are gaining ground in European politics.

In parallel, a political and military assertiveness from the East and Global South, that has not been seen since the end of the Cold War, is on the rise. While cautious, this assertiveness is manifesting in BRICS+, the expanded club whose members until 2023 had been Brazil, Russia, India, China and South Africa. As of October 2024, it now includes five new Global South members (invitations were extended to Argentina, Egypt, Ethiopia, Iran, Saudi Arabia, and the United Arab Emirates (UAE). All except Argentina accepted.¹⁸) While still loosely organised and without an agreed political or economic programme, the bloc represents a significant global economic and political power shift. Economically, South Africa is a small player in BRICS+. However, the bloc presents economic and political opportunities for South Africa to cooperate with its BRICS+ partners both bilaterally and multilaterally. In the absence of a strong economy able to address the needs of its citizens, such leverage is only possible for South Africa if it maintains a strong global presence.

From an economic perspective, the rising powers of China and India are set to slowly outstrip the US and Europe over the next decades. Europe's economic fragility is highlighted by the war between Russia and Ukraine and the scramble to bolster energy sources for Europe. The challenge and opportunity for South Africa is to maintain relations with its traditional trading partners while building new relations with its BRICS+ partners and other countries in Africa. Successfully navigating these relationships will be essential to enable South Africa to achieve its developmental goals.

The carefully constructed post-World War II global order is increasingly under pressure, as highlighted by the war between Russia and Ukraine and Israel's genocide in Gaza. The Gaza genocide is particularly poignant, showing up the weaknesses and biases of international law and its inability to effectively address this most egregious crime. In this case, neither International Court of Justice rulings nor near-consensus resolutions of the UN Security Council have brought peace or assisted in ending Israel's illegal occupation. South Africa has taken a muscular position on these issues, establishing itself as a 'norm entrepreneur' in international relations and strengthening its long-held position about the need to build a multipolar world and for global matters to be addressed in a multilateral format.

This milieu offers both threats and opportunities for nations of the Global South, including those of Africa. The political and economic weakening of the West and the shift to what could become a multipolar and more multilateral world order could offer African states a wider set of partnership options that could assist their

¹⁸ Ferragamo, M. 2024. 'What Is the BRICS Group and Why Is It Expanding?', Council on Foreign Relations, 12 December, <https://www.cfr.org/backgrounder/what-brics-group-and-why-it-expanding>.

development. A great power battle between the West (primarily the US) and the East (primarily China) also threatens to overwhelm many African states. How these countries will fare depends largely on their internal resilience and durability and their ability to maintain a non-aligned position that allows them to benefit from all parties without being forced to choose one relationship over another. However, the unevenness in stability and development on the continent means there is no guarantee that African states will leverage the new emerging situation to their benefit. This is largely because of coups, insurgencies, and civil war in several African states in the late 2010s and early 2020s that have increased forced migration, reversed development initiatives, and threatened state collapse.

Both the African Continental Free Trade Area (AfCFTA) and the African Union's Agenda 2063 are steps forward for the continent in its attempts to strengthen itself internally and achieve its developmental objectives. The seriousness with which these initiatives are implemented will determine whether they are useful for Africa and South Africa. They offer opportunities for African states to work cooperatively to address current and future polycrises in ways that benefit Africans and make them less dependent on states outside the continent in terms of food security, supply of medicines, health services, and investment.

2.4 South Africa's macroeconomic context

2.4.1 Economic growth

Democratic South Africa inherited a relatively stagnant, distorted economy in 1994 and, despite a few limited growth spurts, long-term GDP growth (that averaged 2.4% between 1994 and 2022) significantly underperformed relative to the targets of official economic growth strategies. There have been periods since 2008 in which per capita GDP has regressed as the population grew faster than GDP.

Table 2.2: Annual GDP growth, 1994—2023

Source: Statistics South Africa, 2024

The poor economic performance coincided with a shift in the structure of the economy as apartheid-related market protections were removed. The rapid reduction in trade barriers contributed to a decline in manufacturing as a proportion of GDP and an increase in the contribution of the service sector.

The historic dependence on the primary sector continued, as did the associated challenges of highly variable export earnings from cyclical global markets. The decline in gold mining was counter-balanced to a degree by the increase in sectors such as platinum group metals, coal, iron ore and other smaller contributors. Employment in the mining industry is reduced with increased mechanisation but the industry continues to make a substantial contribution to GDP with production peaking at R883 billion in 2022.¹⁹

Agricultural production and associated employment dipped sharply as historic protections for the commercial farming sector were removed. However, a focus on higher-value export crops has enabled a recovery that has seen employment in the sector recover to levels of the 1990s with significant improvement in wages and conditions. While the value of agricultural production (R450.2 billion in 2022) is substantially lower than that of mining, agriculture employs almost twice as many people (814 518 in 2022) as does mining.²⁰

While there are some structural constraints, South Africa has generally failed to develop and implement a growth path appropriate for the country to achieve its development goals. This is attributed to continued historic economic concentration, aggravated more recently by inefficiencies in network industries, inadequate

¹⁹ Statistics South Africa. 2023. 'Mining: Production and sales', December, 8, <https://www.statssa.gov.za/publications/P2041/P2041December2023.pdf>.

²⁰ De Beer, J. 2022. 'Agricultural Survey, 2022: An Overview of the results', Stats SA, <https://www.statssa.gov.za/publications/P1101/Agricultural%20Survey,%202022%20Media%20presentation.pdf>.

levels of technological innovation and skills, low manufacturing export competitiveness, delays in infrastructure development and vulnerability to global shocks.

After the COVID-19 pandemic, South Africa's GDP grew at a slower pace than its population, meaning that South Africans were getting significantly poorer. In addition, to stabilise the economy, National Treasury has indicated that it will seek to cap debt levels at under 78% of GDP (to which it is projected to rise by 2026 from a low of 23.5% in 2008) through a process of fiscal consolidation.

2.4.2 Household consumption

Household consumption at the aggregate level has risen from R1 355 billion in 1994 to R3 097 billion (constant 2015 prices) in 2023.²¹ However, these average figures should be contextualised in the reality of South Africa's extreme inequality. In 2021, the top 10% of households in South Africa received 65% of total household income while the bottom 50% received only 6%. The picture concerning wealth is even more acute. The top 10% of households owned 86% of net personal wealth, while the bottom 50% had negative average wealth.²² After remaining relatively constant just below 60% for most of the decade between 2010 and 2020, wages as a source of household income declined sharply during the COVID-19 pandemic and had not returned to pre-COVID-19 levels by the end of 2023.

2.4.3 Investment

The NDP set a target of raising public sector infrastructure investment to 10% of GDP, to be financed through tariffs, public-private partnerships (PPPs), taxes and loans and focused on transport, energy, and water.²³ According to the National Treasury's macroeconomic policy review, there has been a steady decline in both public and private sector investment expenditure on capital goods and infrastructure, particularly from 2008. The decline in investment after 2008 is partly attributed to the global financial crisis that negatively affected both private and public sector financing and expenditure capacity.²⁴ Nevertheless, there was an uptick in both 2022 and 2023. In 2022, capital investment as a share of GDP increased to 14.2% from its 2021 share of

²³ NPC. 2012. 'National Development Plan', 34.

²⁴ National Treasury. 2024. 'Macroeconomic policy'.

13.1%.²⁵ In 2023, it increased further to 15.2%. The National Treasury notes that to reach the NDP target, public sector investment in infrastructure will need to grow to 10% of GDP by 2030, while private sector investment in infrastructure will need to grow to 20% of GDP by 2030.²⁶ The National Treasury is currently budgeting R943.8 billion in public sector infrastructure expenditure over the medium term (up to 2027).

Current debt levels and the planned fiscal consolidation path mean that private finance will now have to play a larger role than originally envisaged by the NDP. According to the South African Reserve Bank (SARB), the trend is already in that direction. For example, real capital expenditure by private business enterprises increased by 4.9% in 2023, resulting in the private sector's share of total nominal gross fixed capital formation increasing to 72.3% in 2023 from 71.5% in 2022. In comparison, public corporations' real gross fixed capital expenditure decreased by 1.8% in 2023, year-on-year, decreasing their share of total nominal gross fixed capital formation to 10.3% in 2023 from 11.0% in 2022.²⁷

²⁷ South African Reserve Bank. 2024. 'Quarterly Bulletin', March, 20, <https://www.resbank.co.za/content/dam/sarb/publications/quarterly-bulletins/quarterly-bulletin-publications/2024/01Full%20Quarterly%20Bulletin.pdf>.

²⁸ South African Reserve Bank. 2024. 'Quarterly Bulletin', December, 18, <https://www.resbank.co.za/content/dam/sarb/publications/quarterly-bulletins/quarterly-bulletin-publications/2024/december-2024/01FullQuarterlyBulletin.pdf>.

The Development Bank of South Africa (DBSA) and World Bank have estimated that between R4.9 trillion and R6.5 trillion in infrastructure expenditure will be needed to close the SDGs gap between 2022 and 2030 respectively, i.e., 2% to 3% of GDP annually. Research by the NPC confirms that investments of between R4.5 and R5 trillion will be required by 2030 to drive the energy transition, achieve water security, and enable the digital transition that is so urgently needed. This can only be achieved through the effective blending of public and private sector investments whereby the former leverages the latter on a 1:10 basis.

A significant proportion of the required private sector investment should come from foreign investors. A concerning trend, however, has been the steady divestment by foreign holders of South African share assets; non-residents have sold almost R750 billion of South African equities and over R100 billion worth of bonds since 2015.²⁹ The decline in bond holdings was to some extent mitigated by the high interest rates paid, which have risen significantly above those of global peers.

2.4.4 Trade

South Africa's trade patterns have evolved significantly since 1994. In the first decade of democracy, South Africa relaxed its trade barriers, many of which had been the product of the protectionist posture adopted by the apartheid government. The consequences were not uniformly positive. While exports in most sectors grew, manufactured exports continued to be heavily dominated by resource-based products. In other words, tariff reductions have not induced the necessary structural changes in the economy to significantly alter the export basket. South Africa's strongest export performance in more sophisticated products was in sectors that had been built up through past and present industrial policy.³⁰ This perspective on the role of industrial policy was reinforced in the subsequent decade by the ongoing strength of trade related to vehicle manufacturing.

According to data from the South African Revenue Service (SARS), merchandise trade continues to be dominated by mineral exports (coal, precious metals, and other ores with limited processing of ferroalloys) while imports are dominated by fuels, renewable energy equipment (batteries and inverters), cellular phones and pharmaceutical products. The import and export of vehicle parts and assembled vehicles was the only other item in the top ten. The top ten exports accounted for R734 billion (of a total of R1 843 billion) and

²⁹ Nedlac. 2023. 'Economic Employment Trends in South Africa', August, 7, <https://nedlac.org.za/wp-content/uploads/2023/08/August-2023.pdf>.

³⁰ Department of Trade and Industry. 2010. 'A South African Trade Policy and Strategy Framework', May, xiii, <https://www.tralac.org/files/2012/12/Trade-Policy-and-Strategy-Framework-2010.pdf>.

imports R584 billion (of a total of R1 879 billion).³¹ Other nascent trends have now come to fruition. Perhaps the major development over the past decade has been the rise of Asia as a trading partner region (with China being the leading Asian participant) that now receives R645 billion worth of South African merchandise exports, thus exceeding the share of R502 billion to the wider European region (including Russia, the United Kingdom and other non-EU members).³² Overall, while there was a small positive balance of merchandise exports, trade in services over the same period was in deficit, accounting for about 12% of total exports and 15% of imports.³³

An important future trend is the increasing relevance to South Africa of the AfCFTA. Launched in 2021, South Africa is participating actively in what will become a fast-growing market. In the first year, South Africa's exports to AfCFTA countries accounted for 32% (US\$20 billion) of exports to the rest of Africa, while AfCFTA countries accounted for 10% (US\$7.3 billion) of South Africa's imports. The Economic Commission for Africa (ECA) has suggested that AfCFTA trade could be boosted substantially through the further elimination of tariffs and reduced barriers to trade in services and grow by between 15% (US\$50 billion) and 25% (US\$70 billion) by 2040.³⁴ South Africa's exports to the rest of Africa (excluding the BLNS countries consisting of Botswana, Lesotho, Namibia, Swaziland now Eswatini) reached R356 billion in 2023. This is significant when compared, for instance, to the total in wider Europe (R502 billion). Imports are, however, still low (R114 billion). This suggests that measures to ensure a more equitable trade balance are needed.³⁵

2.4.5 Employment

One of the most significant features of South Africa's employment landscape over the past three decades has been the dramatic expansion of the labour force which grew from 11.3 million in 1994 to 28.3 million in 2023.³⁶ However, while the number of individuals in employment increased steadily, this growth was insufficient to absorb the increased number of people available for employment. One consequence over the last decade of

³¹ South African Revenue Service. 2024. 'Top 10 Commodities for January to December 2023', <https://www.sars.gov.za/wp-content/uploads/Docs/TradeStats/2024/Apr8899/Top-10-Cumulative-Commodities.zip>.

³⁶ DPME. 2024. '30-year Review', 9.

what could have become a demographic dividend is that informal sector employment grew faster than the formal sector. Even in the formal sector, the prevalence of certain employment benefits has decreased over the same period, while the tendency towards partial employment has become more pervasive.³⁷

Table 2.4: South African labour market dynamics, 1994–2023

VARIABLE	1994	2004	2014	2022	2023
Labour force ('000)	11 386	16 596	20 122	24 600	24 619
Total employed ('000)	8 896	11 844	15 055	16 700	16 723
Unemployed ('000)	2 489	4 611	5 067	7 800	7 895
Unemployed rate (%)	20.0	24.1	25.1	31.9	32.1

Source: Department of Planning, Monitoring and Evaluation and Statistics South Africa, 2024

Of greater consequence, however, is that a large number of people have been left out of the labour market altogether. The result is an unemployment rate of 31.9% in 2023 – one of the world's highest. Major concerns in this regard are that many young people are categorised as not in employment, education or training (NEET), and those who are less skilled and less educated take longer to secure employment or any form of economic activity. At the height of the COVID-19 pandemic, about 2 million jobs were lost and many South Africans lost their income. Total employment recovered in quarter 3 of 2023 to the pre-COVID-19 level of 16.7 million.³⁸

2.4.6 Fiscal context

In the current economic context, the medium-term fiscal context is also challenging as higher borrowing, exacerbated by rising interest rates, takes up a growing share of the budget. As a consequence of the 2008 global financial crisis, followed by the COVID-19 pandemic, South Africa's debt-to-GDP ratio grew significantly from R627 billion or 23.6 per cent of GDP to R5.26 trillion or 74.1 per cent of GDP, resulting in debt-service costs that now consume 21.6 per cent of revenue. The National Treasury seeks to stabilise debt levels at 75.5% by 2025/26 to curb the trend of rising debt service costs, which are expected to reach a peak at 21.7% of revenue in 2025/26 and decline thereafter.³⁹

Government will focus on raising economic growth by improving infrastructure delivery and operation and restructuring the state to be more efficient and fit for purpose. Fiscal policy will support this approach by

³⁷ Nedlac. 2023. 'Economic Employment Trends in South Africa', August, 5.

³⁸ DPME. 2024. '3-year Review', 52.

³⁹ National Treasury. 2024. '2024 Medium Term Budget Policy Statement (MTBPS)', 17,23.

stabilising debt and debt service costs and by pursuing a balanced approach that includes spending restraint, revenue measures, and additional borrowing. Tax revenues for 2023/24 fell short of 2023 budget estimates by R56.1 billion. However, with gradually improving economic growth, gross tax revenues are expected to increase by 7.1%, 7.1% and 6.8% respectively over the next three years, translating into gross tax revenue increasing from R1.97 trillion in 2025/26 to R2.26 trillion in 2027/28. Tax buoyancy is therefore expected to be slightly higher over the medium term.⁴⁰ The outlook for public finances is vulnerable to a range of domestic and external risks. The fiscal strategy adopted will help government mitigate the short-term risks, which include a weaker than expected global and domestic economic growth that will slow revenue growth and widen the budget deficit; continued losses by municipalities and SOEs, resulting in requests for bailouts; and higher borrowing costs as a result of an elevated risk premium and tighter global monetary conditions.

In the longer term, the risks include lower potential growth that will make it more difficult for government to borrow; growing spending pressures, in sub-national government and SOEs; and adoption of new policy priorities not linked to reliable financing arrangements. These could further weaken the fiscal outlook and challenges in the management of government's contingent liabilities. These will require a strategic approach to avoid further weakening the fiscal position. In response, the National Treasury proposes to maintain the share of the social wage as a proportion of non-interest expenditure, to be assisted by other medium-term measures, including the proposed reconfiguration of government entities and other efficiency improvements.

2.5 South Africa's socio-economic context

2.5.1 Demographics

Population dynamics significantly affect the nation's long-term social, economic, and political landscape. Changes in population size, fertility rates, mortality rates and demographic structure all influence labour demand and supply, food security, resources available for social and basic services, infrastructure capacity, and family structures. These factors represent some of the challenges identified by Census 2022.

Census 2022 found that the population of South Africa increased from 51.7 million in 2011 to more than 62 million in 2022, a growth rate of 19.8% or a 1.8% yearly average. The Statistics South Africa (Stats SA) mid-year estimate of the population was 63.04 million, a 21.9% increase from 2011.⁴¹ This growth was substantially faster than the NDP's projections for 2030 in which the population was forecast to be between 58.5 and 61.5 million, the latter only likely in the extreme case of massive migration from neighbouring countries.⁴² This

⁴⁰ National Treasury. 2024. '2024 Budget Review', 36–37.

⁴¹ Stats South Africa. 2024. '2024 mid-year population estimates', 30 July, <https://www.statssa.gov.za/?p=17440>.

⁴² NPC. 2012. 'NDP', 99.

increase in growth rate reflected successful efforts to bring the HIV/AIDS epidemic under control. The population is now forecast to reach almost 66 million by 2030.⁴³ Females constitute 51.5% of the total population, while 48.5% are males.

With a population of 15 million, Gauteng has become the most populated province, having overtaken KwaZulu-Natal (KZN) in Census 2011. KZN's population grew to 12.4 million in Census 2022. Northern Cape remains the smallest province with a population of 1.4 million.

Black Africans remain the dominant population group at 81.4%, followed by the Coloured population at 8.2%. The White share of the population declined to 7.3% in 2022 from 8.9% in 2011, while that of Indians/Asians increased slightly from 2.5% in 2011 to 2.7% in 2022. The age structure of the population still strongly reflects the impact of the HIV/AIDS epidemic of the 1990s which substantially reduced population growth and fertility rates.

Figure 2.1: Age structure by 5-year age groups, 2002 vs 2022

Source: Statistics South Africa, 2023

There is also a substantial variation in age profiles between population groups. The median age of Black Africans is the lowest at 27 and the highest is 45 among Whites, indicating that Black Africans have the highest proportion of young people (high fertility rate) and the lowest share of the adult population (lower life expectancy). By contrast, the White population has the lowest share of young people or a low fertility rate and the highest proportion of the adult population or low adult mortality rate.

⁴³ United Nations Department of Economic and Social Affairs: Population Division. 2022. 'World Population Prospects 2022', [https://population.un.org/wpp/Download/Files/2_Indicators%20\(Probabilistic\)/EXCEL_FILES/2_Population/UN_PPP2022_Output_PoP_Tot.xlsx](https://population.un.org/wpp/Download/Files/2_Indicators%20(Probabilistic)/EXCEL_FILES/2_Population/UN_PPP2022_Output_PoP_Tot.xlsx).

The variation in age distribution also shows a gendered dimension with females portraying low adulthood mortality or high survival (see Figure 2.1). The social and economic disenfranchisement of Black Africans, especially Black African women, continues despite the broader context of efforts to promote socio-economic transformation and reverse the legacy of apartheid social engineering.

Demography significantly influences the economy, as a larger active working-age population—as characterised by a demographic dividend—can contribute productively. However, South Africa is not fully capitalising on this potential dividend, as a substantial number of younger individuals lack the necessary skills and struggle to find employment, resulting in a loss of their potential contributions. Young people face the highest unemployment rate at 44%, compared to the national average of 32%.⁴⁴

There has been a sustained increase in the urban population in the democratic era due to urban migration (see Figure 2.2). This has led to increased pressure on housing and infrastructure provision in urban areas and aggravated environmental impacts. Government has responded through the provision of social housing, which has raised the percentage of people living in formal housing from 78.4% in 2011 to 83.52% in 2023.⁴⁵ However, spatial inequities in access to services between urban and rural areas and within the urban spaces remain, originating partly from the apartheid city model and the failure of spatial transformation policies. The latter have failed to discourage new settlements on the urban peripheries. Instead, densification has occurred.

Figure 2.2: Trajectory of urban-rural population, 1960-2022

⁴⁴ Statistics South Africa. 2023. 'Quarterly Labour Force Survey: Quarter 3: 2023', November, <https://www.statssa.gov.za/publications/P0211/P02113rdQuarter2023.pdf>.

⁴⁵ Statistics South Africa. 2023. 'General Household Survey 2023: Addendum tables', 23 May, https://www.statssa.gov.za/?page_id=1854&PPN=P0318.

2.5.2 Education

Education has achieved nearly universal access for children of compulsory schooling age, specifically those between 7 and 15 years old, with school attendance reaching just under 99% in 2023. Consequently, there has been a steady increase since 2002 in the percentage of individuals over 20 years of age who have attained at least a Grade 12 pass. This figure rose from 21.3% in 2002 to 35.1% in 2023. Access to education has been further improved by the implementation of no-fee schools. In 2007, 21.4% of learners attended no-fee schools, and by 2023, this percentage had increased to 66.1%.⁴⁶

However, a significant number of children between the ages of 7- 18-years do not attend school and there is also a gender dimension to the reasons young people do not attend school. In the 7- to 18-years category, the main reason for males not attending school (30.8%) was poor academic performance. Among girls, 23.5% of those not attending stayed away because of a lack of school fees, and 14.1% because of family commitments.⁴⁷

Early childhood development (ECD) contributes significantly to children's physical development and cognitive abilities. This foundation allows children to fully benefit from formal basic education programmes. However, substantial inequalities in access to ECD and related educational attainment have historically mirrored broader societal inequalities. Poor households, facing high unemployment rates, often cannot afford privately provided ECD educare centres.

Figure 2.3: Access to early childhood development by type and province

Source: Statistics South Africa, 2023

Participation in ECD has shown significant improvement across different provinces. Among children aged 0 to 4 years, participation increased by 24.6 percentage points, rising from 16% in 2006 to 40.6% in 2019. For children aged 3 to 5 years, the percentage went up from 60% in 2009 to 73.5% in 2019. Additionally, the

⁴⁶ Statistics South Africa. 2024. 'General Household Survey: 2023', ix.

⁴⁷ Maluleke, R. 2024. 'General Household Survey 2023' (Presentation), Statistics South Africa, 11, <https://www.statssa.gov.za/publications/P0318/GHS%202023%20Presentation.pdf>.

involvement of 6-year-old children, now recorded as attending Grade R, has remained above 90% annually since 2009. This positive trend was further supported by the transfer of responsibility for ECD centres from the Department of Social Development (DSD) to the Department of Basic Education (DBE) in 2022.

Despite the challenges faced, the percentage of individuals aged 20 and over who completed Grade 12 increased from 28.9% in 2011 to 37.6% in 2022. Additionally, the proportion of people who completed post-school education rose from 11.7% in 2011 to 12.7% in 2022. The Labour Force Quarterly Survey for the first quarter of 2024 revealed that unemployment rates were higher among those who did not complete Grade 12 (39.1%) and among those with only a matric certificate (34.5%). Among graduates, the unemployment rate was 11.8%.⁴⁸

The evolution and performance of the education and training system after secondary school, known as post-school education and training (PSET), is complex. While tertiary education at universities has benefited from a common regulation and support system, other training and skills development levels present a more intricate situation. Previously, much of this sector was managed by various provincial authorities and Bantustan institutions, each with its unique approaches. There was no unified policy framework, as different sectors—such as nursing, technical fields, and agriculture—each had their institutional structure.

The post-1994 political transition brought significant changes to the sector, especially concerning technical training. Although student enrolments for technical training increased, the number of opportunities for practical training—which is crucial for acquiring many skills—decreased.

As a result of its rapid development, university education has accounted for a significant portion of the resources allocated to PSET. While enrolment in and financial support for Technical and Vocational Education and Training (TVET) courses has increased, this growth has not always aligned with the demand for graduates in key fields of study.

The number of students enrolling in higher education has surged, including those from the most financially disadvantaged backgrounds. The increase in students receiving financial assistance from the National Student Financial Aid Scheme (NSFAS) has played a crucial role in this growth. NSFAS is recognised as one of the most successful initiatives aimed at breaking the intergenerational cycle of social inequality in access to and outcomes in PSET. The number of students benefiting from the scheme rose dramatically from 43 876 in 1995 to 785 917 in 2023. In some respects, the post-school NSFAS system has complemented ECD initiatives.

⁴⁸ Statistics South Africa. 2024. 'Quarterly Labour Force Survey: Quarter 1: 2024', May, <https://www.statssa.gov.za/publications/P0211/P02111stQuarter2024.pdf>.

ECD programmes often exclude the most needy children, which weakens commitments to provide universal education through fee-free basic and higher education policies. This exclusion affects specific groups and contributes to poor performance among those enrolled. Both basic education and tertiary sectors face challenges with high repeat rates.

Additionally, the NSFAS only supports students from families with annual household incomes below a certain threshold. As a result, students from households with incomes slightly above this level often find themselves excluded from funding opportunities.

The increase in university student numbers has led to predictable challenges, including limited employment opportunities. At the same time, there is a growing shortage of well-trained graduates in practical fields, such as nursing and various artisanal skills, where the incentives and support systems differ. Many TVET programmes are not adequately aligned with the skills needed by the economy. Some TVET programmes struggle with low enrolment due to their lack of popularity. In some cases, students seem motivated to attend these programs primarily to gain access to grants, which are often used to supplement household income rather than focusing on potential post-training job opportunities.

Figure 2.4: Education attainment for people aged 20 and above

Source: Statistics South Africa, 2023

2.5.3 Health

In 1994, South Africa faced significant health challenges, both in terms of the population's health status and the institutional framework for healthcare provision. As in many other sectors, the responsibility for public healthcare was divided among a range of formerly separate institutions. Apartheid administrations were responsible for healthcare in the former Bantustans, while provincial administrations provided services to different racial groups through different institutions. This confusion was exacerbated by the split between local, provincial and national government agencies handling curative and preventive healthcare.

The apartheid system further entrenched fragmentation of healthcare when the Bantustans were created, each with its own health department. The Bantustans and their government departments acted separately from each other, like quasi-independent powers, with control carefully manipulated by Pretoria. By the end of the apartheid era, there were 14 separate health departments in South Africa, health services were focused on the hospital sector, and primary-level services were underdeveloped.⁴⁹ The situation was further complicated by the existence of a significant private health sector serving principally White communities.

Transforming this institutional confusion into a cohesive functioning system was a major challenge. Moreover, the divided and unequal society presented a diverse range of health problems. In poorer, predominantly Black communities, issues such as tuberculosis and malnutrition needed urgent attention, along with basic maternal and child care services. In contrast, wealthier white communities enjoyed a high level of tertiary care and faced diseases of affluence, such as hypertension and obesity. The new public healthcare system had to integrate these issues, especially as diseases of affluence began to affect the growing Black middle class.

These challenges were compounded by the fact that the HIV/AIDS epidemic was taking root just as democracy was being established, at a time when there was not yet an effective drug therapy for the disease and it was, usually inevitably, fatal. By 2002, the impact of HIV/AIDS dominated the healthcare system with a reported 5.4 million people living with AIDS.⁵⁰ Although drug therapies were becoming available and prevention of mother-to-child transmission was becoming possible, treatment was still extremely expensive. By the time effective treatment became possible, HIV/AIDS had reached epidemic proportions and had substantially reduced adult life expectancy from 63 years in 1990 to 54 years in 2005.⁵¹ Many children were orphaned.

Over the past 30 years, South Africa's health services have seen numerous developments, including ongoing institutional reform with the implementation of National Health Insurance (NHI). However, the comprehensive management of the HIV/AIDS epidemic is arguably the most significant health sector development during the first 30 years of democracy, providing a foundation for further advancements.

⁴⁹ Coovadia, H., Jewkes, R., Barron, P., Sanders, D., McIntyre, D. 2009. 'The health and health system of South Africa: historical roots of current public health challenges', *Lancet* 374:9692, 817–834.

⁵⁰ Horton, M. 2005. 'HIV/AIDS in South Africa', in Nowak, M. and Ricci, L. A. (eds.), *Post-Apartheid South Africa: The First Ten Years*, International Monetary Fund, 113.

⁵¹ World Bank. 2022. 'Life expectancy at birth, total – South Africa', <https://data.worldbank.org/indicator/SP.DYN.LE00.IN?locations=ZA>.

2.5.4 Social development

At the dawn of democracy, it was estimated that at least 58% of South Africans lived below the poverty line.⁵² This declined to 36.4% in 2011, and further to 21.7% in 2018 (using the lower-bound poverty line).⁵³ Much of this success is the outcome of an expansion of the broad social protection framework that has provided some income security to the poorest households through a mix of social grants, public employment programmes and social welfare. This has been associated with the expansion of targeted social interventions such as school feeding schemes that have ensured that young learners receive at least a minimum nutritional intake.

However, the fundamental driver of poverty continues to be the limited employment and livelihood opportunities available in many communities. Social grants therefore continue to be a key source of income for over 52% of households in 2020, reducing to 50% in 2023, which is still above its 2019 levels (see Figure 2.5).⁵⁴ Furthermore, women, children and youth are disproportionately affected by poverty. A 2020 survey by Stats SA found that 62.1% of children were 'multidimensionally poor, that is being deprived in at least 3 out of 7 dimensions of well-being'.⁵⁵ The study also reveals other concerning intersections. African children in the birth to 17-year age category experience poverty rates between 65% and 70%. White children have the lowest deprivation headcount of 11%. Children who grow up in female-headed households are on average 20% more deprived than children who grow up in male-headed households.

Figure 2.5: Percentage distribution of those who benefitted from social grants, 2003–2023

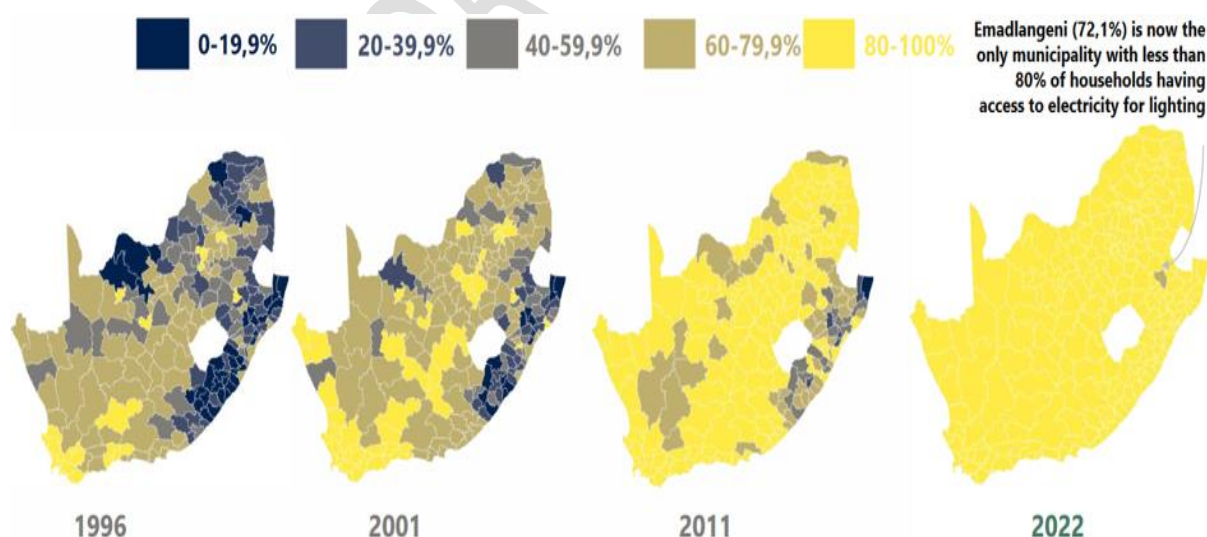

Source: Statistics South Africa, 2023

2.5.5 Basic services and human settlements

The provision of basic infrastructural services – water and sanitation, electricity, roads, and refuse removal and disposal – has been the constitutional responsibility of local government since a system of democratic local government was put in place in 2001. Housing, however, has been driven primarily at the provincial level.

Figure 2.6: Household access to electricity by municipality

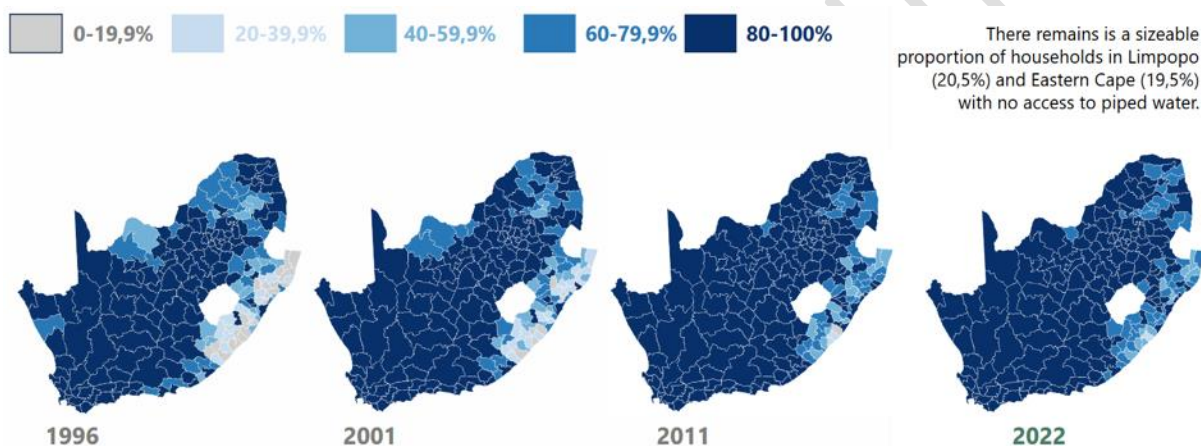

Source: Statistics South Africa, 2023

Access to electricity and safe water has grown rapidly. Electricity access is currently between 80% and 100% across almost all municipalities (see Figure 2.6). Access to piped water follows a similar trend countrywide

except for the Eastern Cape and Limpopo where one in five households do not have access to piped water and must rely on local sources that are not always protected and reliable (see Figure 2.7). In many cases, however, improved access to infrastructure has coincided with increasing levels of service interruptions. These are caused in part by bulk supply and reticulation infrastructure constraints as well as a failure on the part of the municipal service providers to manage household water use by metering and billing households that use higher volumes. As these interruptions intensify, households and businesses are opting out of municipal network services in search of alternative sources of electricity and water. A failure to collect revenue from high-volume users also reduces the ability of municipalities to manage their systems properly. Consequently, although access to free basic services for poor households is funded, supplies are often compromised and access to reliable services is declining in some areas.

Figure 2.7: Household access to piped water by municipality

Source: Statistics South Africa, 2023

The 1994 drive to provide RDP houses saw over two million dwelling units built and handed over to eligible residents from 1994 to 2010.⁵⁶ However, while this mechanism of delivery addressed some immediate challenges and kick-started a process of housing development, it did not meet many of the needs of the diverse communities of South Africa.

The 2004 Breaking New Ground policy sought to redirect and enhance existing mechanisms to move towards more responsive and effective delivery. The new human settlements plan reinforces the vision of the Department of Human Settlements (DHS) to promote the achievement of a non-racial, integrated society through the development of sustainable human settlements and quality housing.⁵⁷ The new approach resulted

⁵⁶ PoliticsWeb. 2010. '2,4m RDP houses built since 1994 – Minister', 14 October, <https://www.politicsweb.co.za/documents/24m-rdp-houses-built-since-1994--minister>.

⁵⁷ Department of Human Settlements. 2004. 'Breaking New Ground: A Comprehensive Plan for the Development of Sustainable Human Settlements', 9, https://www.dhs.gov.za/sites/default/files/documents/breaking%20new%20ground%202004_web.pdf.

in a more diverse set of instruments deployed to support broader efforts for a wider range of spatial development, urban renewal and sustainable rural development strategies, as well as to work with the Expanded Public Works Programme (EPWP) and municipal Integrated Development Plans (IDPs) planning processes. A further challenge was to align housing development with the priority of reducing the apartheid divides between largely poor areas for Black people and better developed areas formerly for White people.

South Africa's original goal with the Breaking New Ground programme was to eradicate informal housing by 2014.⁵⁸ The state provided approximately 5 million housing opportunities from 1994 to February 2022.⁵⁹ A housing opportunity can be an actual house or only a plot of land with access to piped water and electricity. As of February 2023, 2.5 million households were on the National Housing Needs Register.⁶⁰

2.6 Summary

The 7th Administration assumes office amid multiple global crises. The economic and political competition within a developing multipolar world will impact South Africa's international relationships, presenting both challenges and opportunities. The country must adapt to the shifting balance of power from the West to the East while maintaining and establishing new ties. Political instability is rising across the continent, including instances of unconstitutional changes in government. However, the AfCFTA presents promising economic opportunities for both Africa and South Africa to achieve their developmental goals. Domestically, increasing population pressures are driving the demand for more basic services and economic opportunities. Unfortunately, financial constraints and the weakened capacity of local governments hinder effective responses to these challenges. Additionally, issues like state capture and economic stagnation have impaired the private sector's ability to address long-term problems. After experiencing economic growth during the 2000s, South Africa's economy stalled following the global financial crisis of 2008 and further declined during the COVID-19 pandemic, negatively impacting per capita incomes. Achieving economic growth and implementing essential structural reforms for rapid, inclusive and sustainable economic growth are critical challenges for the country. Despite the low growth rates, South Africa was compelled to expand its social welfare programmes, especially due to the pandemic. Given the country's high levels of poverty, inequality, and unemployment, it is essential to focus on reducing poverty and alleviating the high cost of living, particularly for the most vulnerable populations.

CHAPTER 3

STRATEGIC PRIORITY 1: DRIVE INCLUSIVE GROWTH AND JOB CREATION

CHAPTER 3 STRATEGIC PRIORITY 1: DRIVE INCLUSIVE GROWTH AND JOB CREATION

3.1 Introduction

Driving inclusive growth and job creation is the Apex Priority of the 7th Administration. Achieving rapid, inclusive and sustainable economic growth is key to eradicating poverty, reducing inequality and unemployment, and the wider transformation of society. South Africa's economy, however, has underperformed and is not generating sufficient employment and income to support the country's growing population. South Africa's levels of inequality are among the highest globally and the middle class is not growing fast enough. Economic transformation and empowerment have been slow, evident in skewed patterns of land ownership, income and control of large firms.

Given this context, the priority is to grow existing economic activity and associated employment by curtailing regulatory and other barriers to investment and creating a supportive enabling environment. This must be achieved while protecting workers' rights and ensuring greater participation by historically marginalised groups.

Over the past three decades, extensive infrastructure and housing development programmes have left a legacy of better housing and public services, but these have not proven sufficient to trigger broader and more sustainable economic development. To shift South Africa's economic trajectory, a new strategy is required to address the binding constraints on growth, increase the dynamism and productivity of the economy, and unleash private investment.

This strategy must consider new economic circumstances. In recent decades, technological advances have made manufacturing more capital-intensive and less labour-absorbing, rendering the traditional path to growth for many developing countries less effective.⁶¹ While it may not be possible to emulate the approach taken by industrialising countries in East Asia and elsewhere, South Africa's economy has unique strengths and advantages that can be harnessed as part of a growth strategy that is tailored to its context.

Over the next five years, South Africa will accelerate growth through massive new investment in the energy sector, leveraging its unique solar and wind resources to reduce energy costs and power green manufacturing. As the world races to reduce carbon emissions, this will be a key driver of growth and job creation.

⁶¹ Rodrik, D. and Stiglitz, J., 2024. A new growth strategy for developing nations.

At the centre of South Africa's economic growth strategy for the next five years will be the accelerated implementation of structural reforms through Operation Vulindlela, to improve the performance of network industries, leverage private capital, enhance competition, and unlock investment. This includes building on the reforms initiated during the 6th Administration in the energy, logistics, telecommunications, and water sectors, and reforms to the visa system.

Building on its sophisticated existing capabilities in labour-intensive sectors such as the services sector, tourism, green manufacturing and agriculture, South Africa has significant scope to grow export volumes and jobs. Industrial policy will drive growth in these sectors, using well-designed instruments that are efficiently targeted and closely linked to performance. In addition, trade policy will be used to open new markets for South Africa's exports, including through the implementation of the AfCFTA.

Above all, this strategy places jobs at its centre. Just as pro-growth policies will help the country achieve socio-economic transformation, an employment focus will promote accelerated inclusive growth. Interventions aimed at stimulating economic growth and job creation in the private sector will be complemented by enhanced investment in public employment.

3.2 Problem statement

Apart from the period 2005-2007, when GDP growth reached 5% per annum, South Africa's economy has struggled to achieve the rate of growth required to achieve a significant increase in employment and incomes.

⁶² South Africa's long-running growth trajectory has been weak compared to peer countries (see Figure 3.1). The economy experienced a dramatic decline in relative GDP per capita between 1970 and 1989, reflecting the economic cost of apartheid. The post-apartheid economic story has been one of arresting this decline, without achieving the economic lift-off experienced in other developing countries over the same period. South Africa achieved a steady growth rate in the early to mid-2000s, supported by higher commodity prices. However, growth slowed sharply in the aftermath of the 2008 global financial crisis. Despite a significant increase in public spending, it did not recover and dropped further than other emerging markets. In the decade and a half since, high spending levels have continued without any observable increase in economic growth.

Figure 3.1: Growth in GDP per capita (constant USD, index = 1994)

Source: Operation Vulindlela⁶³

From 1999 to 2008, GDP growth in South Africa averaged above 4% per year, a rate high enough to sustain income per capita gains of 2.6% per year. However, from 2010 to 2019, GDP growth slowed to just 1.7%, which only allowed average incomes to rise by 0.15% per annum. Since 2015, income per capita has been declining. This means that the average South African has experienced a decline in their quality of life each year for the past eight years. This is untenable from an economic and social point of view.

South Africa currently faces a triple challenge of poverty, inequality and unemployment. In addition to the divides of geography, race, and education, the impact of the COVID-19 pandemic has exacerbated the divide between those who are employed and therefore included in the economy, and those who are unemployed and therefore excluded from it. The economy has been stuck in a low-level equilibrium with low GDP growth, stagnant fixed capital formation and falling income per capita.

Economic growth is constrained by a shortfall in electricity supply, the deteriorating performance of the freight logistics system, particularly freight rail, and widespread crime and corruption that undermines investor confidence. Recent studies have pointed to these microeconomic factors as the primary constraint on growth.⁶⁴ In addition, rising public spending without an associated increase in economic growth has resulted in an

⁶³ Operation Vulindlela. 2024. 'Towards a second wave of reform', 25 June, 17, <https://www.stateofthenation.gov.za/assets/downloads/ov-conf/01.-operation-vulindlela-framing.pdf>.

⁶⁴ Hausmann, R., et al., 2022. Macroeconomic risks after a decade of microeconomic turbulence: South Africa 2007–2020.

unsustainable debt burden, with interest payments now the fastest-growing expenditure item. The only sustainable solution to stabilising the fiscal trajectory is to increase the economic growth rate.

In addition to the low economic growth rate, these dynamics have resulted in steadily increasing unemployment and rising inequality. Labour force growth has been faster than the increase in available jobs, with the number of unemployed adults reaching 12.4 million at the end of the second quarter of 2024.⁶⁵ **Error!**

Reference source not found. The unemployment rate has increased steadily as the labour force (aged 15–65) increased from 31.5 million in 2008 to 40.5 million in 2022, growing at a compound annual growth rate (CAGR) of 1.8% (see Figure 3.2). In contrast, total employment increased by a CAGR of 0.7%. This has left a large and growing number of people unemployed.

Figure 3.2: Unemployment rate (%), 2008 -2024

Source: Operation Vulindlela⁶⁶

The private sector accounts for approximately 88% of employment in South Africa. Enabling businesses to grow is thus crucial to reducing unemployment. This requires a significant increase in investment. A key target in the National Development Plan (NDP) is for gross fixed capital formation (GFCF) to reach 30% of GDP by 2030, with public sector investment reaching 10% of GDP. South Africa is far from this target, with GFCF recovering to just 14% of GDP in 2022 from a low of 13% in 2021. Since the sharp decline in investment during the 1980s as

⁶⁵ Statistics South Africa. 2024. 'Quarterly Labour Force Survey: Quarter 2: 2024', <https://www.statssa.gov.za/publications/P0211/P02112ndQuarter2024.pdf>.

⁶⁶ Operation Vulindlela. 2024. 'Towards a second wave of reform', 18. <https://www.stateofthenation.gov.za/assets/downloads/ov-conf/01.-operation-vulindlela-framing.pdf>

apartheid suffocated the economy, the highest level of investment that South Africa reached was 22% of GDP in the lead up to the 2010 FIFA World Cup in 2008.

Figure 3.3: Gross fixed capital income (% of GDP), 1994 to 2024

Source: World Bank⁶⁷

Twelve years after the NDP proposed a strategy to increase economic growth to 5.4% to enable South Africa to address its three main developmental challenges – poverty, inequality and unemployment – economic growth remains elusive. The consequent poverty, high levels of unemployment and extreme, visible inequality threaten social cohesion. To address these challenges, South Africa requires a series of bold and coordinated interventions that can structurally transform the economy and provide the resources needed to improve the lives of all South Africans. Such interventions will create the conditions for further growth and create a more inclusive and sustainable economy and society. An average growth rate of at least 2.6% will be targeted by 2027, rising above 3.0% in 2029, to meaningfully reduce unemployment and improve the lives of the majority of South Africans. This is South Africa’s growth challenge and the objective of this plan.

⁶⁷ World Bank. 2024. ‘Gross fixed capital formation (% of GDP) - South Africa, Upper middle income, Lower middle income, High income’, <https://data.worldbank.org/indicator/NE.GDI.FTOT.ZS?contextual=default&end=2023&locations=ZA-XT-XN-XD&start=1994>.

3.3 NDP goals and objectives

The NDP identified two main developmental challenges for South Africa: poverty and inequality. Addressing and dealing with both these challenges by 2030 is the main thrust of the NDP. To do so, the Plan lists three main goals: eradicate poverty, reduce income inequality, and reduce unemployment. The NDP set the following specific objectives to reach these goals by 2030:

- Reduce the unemployment rate to 6% and create 11 million jobs;
- Achieve an average annual real GDP growth rate of 5.4%;
- Increase investment GFCF as a share of GDP to 30%;
- Improve labour force participation to 65%;
- Reach 2 million people through public employment programmes;
- Simplify the regulatory environment to facilitate the growth of small enterprises;
- Establish a sustainable, resilient, low-carbon economy;
- Transition to an equitable low-carbon economy, creating new economic opportunities to protect communities and promote livelihoods;
- Address major constraints impeding accelerated growth and development of the mining sector;
- Achieve beneficiation of minerals where suitable capacity already exists, or where beneficiation is likely to lead to downstream manufacturing; and
- Build national institutions for science, technology, and innovation.

According to the NDP, the two main enablers in the attempt to deal with the country's developmental challenges are an increase in economic growth and an increase in employment. Strategic Priority 1 of the MTDP 2024-2029 is, thus, closely aligned with the NDP's 'Chapter Three: Economy and employment'. As the Apex Priority of the MTDP 2024-2029, Strategic Priority 1 directly aligns the MTDP with the NDP's main objectives and directly tackles the country's two main developmental challenges identified by the NDP – high levels of poverty and inequality. Furthermore, it complements other relevant NDP chapters, including those addressing economic infrastructure (Chapter Four), an Integrated and Inclusive Rural Economy (Chapter Six), and environmental sustainability (Chapter Five).

To achieve higher levels of growth and employment, the MTDP 2024-2029 prioritises several interventions, including fostering collaboration with the private sector to protect existing jobs and investments, particularly vulnerable economic sectors; a government-led strategy to drive growth in labour-intensive sectors such as services, agriculture, manufacturing, mining and tourism; and the finalisation and implementation of sector-specific master plans. At the policy level, the MTDP 2024-2029 commits the government to strengthening

results-based industrial policy incentives that support exports and job creation and call for the continued implementation and optimisation of public employment programmes, including the Presidential Employment Stimulus (PES), the National Youth Service, and Expanded Public Works, and prioritising the provision of work experience to young people.

To stimulate growth in the mining sector, the MTDP 2024-2029 proposes the implementation of a modern and transparent mining rights system to enable greater investment in exploration and expanded mining production, and domestic mineral processing. To encourage small businesses development, the MTDP proposes cutting red tape and streamlining support services for small enterprises, entrepreneurs and cooperatives, especially in townships and villages. The MTDP regards infrastructural development as crucial to Strategic Priority 1, and aligning with specific NDP infrastructural objectives, especially those in the NDP's Chapter Four. It proposes that dedicated programmes and systems be established to maintain public infrastructure; continuing institutional reforms in the water sector; and greater investment in infrastructure development in the key sectors of energy, communications, water and transport infrastructure, as well as a focus on underserved areas. In line with the NDP objectives on a low-carbon economy, as contained in the NDP's Chapter Five, the MTDP's interventions include the continued implementation of the Energy Action Plan (EAP); expediting the rollout of the Transmission Development Plan; implementing the Just Energy Transition Investment Plan (JET-IP) and ensuring that South Africa's transition to a low-carbon economy supports communities and workers; and the establishment of a special economic zone in Boegoebaai to drive investment in green hydrogen energy projects.

Finally, building upon the NDP's Chapter Nine: Improving Education, Training and Innovation', the MTDP 2024-2029 proposes interventions to grow and transform South Africa's science, technology, and innovation capabilities, human resources and research infrastructure. It also emphasises greater investment in digital identity and payments systems, expanding access to affordable broadband, and enhancing digital skills training for young people.

3.4 Outcomes for Strategic Priority 1

Strategic Priority 1 seeks to drive inclusive growth and job creation. To achieve this, it targets achieving a GDP growth rate of more than 3.0% by 2029, which is projected to reduce unemployment to below 28.0% by the end-term. This strategic priority will be achieved through nine strategic outcomes in key areas of the economy over the next five years. These are:

- Increased employment and work opportunities;
- Accelerated growth of strategic industrial and labour-intensive sectors;

- Enabling environment for investment and improved competitiveness through structural reforms;
- Increased infrastructure investment, access and efficiency;
- Improved energy security and a just energy transition;
- Increased trade and investment;
- A dynamic science, technology and innovation ecosystem for growth;
- Supportive and sustainable economic policy environment; and
- Economic transformation and equitable inclusion of women, youth and persons with disabilities for a just society.

Initiatives and interventions are already underway in many of these areas. The MTDP builds on reforms previously initiated by the 6th Administration to ensure that these are completed, sustained, and achieve developmental impact. The MTDP 2024–2029 incorporates interventions from the Economic Reconstruction and Recovery Plan (ERRP), which was the government’s short-term recovery plan in response to the effects of the COVID-19 pandemic, and outlines an integrated growth strategy that will support a second wave of reforms through OV. It is important to note that these strategic interventions do not encompass all the programmes that will be implemented by the government over the next five-year period but rather set out the actions that must be prioritised to achieve the outcomes highlighted above and detailed below.

3.4.1 Increased employment and work opportunities

Structural reform and other growth measures are necessary to grow sustainable employment in the medium term. However, their effects on generating employment are not typically immediate, while the nature of the unemployment crisis requires immediate forms of intervention. Reforms that will enhance inclusive growth therefore need to be complemented by more direct forms of investment in employment creation, through public employment programmes and related measures that can create jobs in the shorter term as part of a counter-cyclical strategy funded publicly that will decline in importance as market-based opportunities increase. This will mitigate the impact of the job crisis and provide a significant stimulus to aggregate demand.

Since its establishment in October 2020, the Presidential Employment Stimulus (PES) has created earning opportunities for more than 2 million participants through various programmes. Successful initiatives such as the Social Employment Fund, the Basic Education Employment Initiative, and the National Youth Service will be institutionalised and scaled up. In addition, there is a need to streamline existing active labour market programmes (ALMPs) and improve their impact. A priority will be to reform public employment programmes, including the PES, the Expanded Public Works Programme (EPWP), and the Community Work Programme

(CWP) to ensure that these deliver meaningful work and improved outcomes toward more sustainable livelihoods through a programmatic approach.

Alongside the PES, government will continue to support the Presidential Youth Employment Intervention (PYEI). The National Pathway Management Network will be strengthened by establishing the SA Youth Trust to facilitate greater public-private collaboration in tackling youth unemployment. Government will continue to work with social partners to scale up effective programmes targeting unemployed young people, such as the Youth Employment Service (YES).

Current successful initiatives such as the expansion and institutionalisation of the PES, including the Social Employment Fund, the Basic Education Employment Initiative, and the National Youth Service will continue. Over the five-year term government will target 6 million employment opportunities.

Significant potential for job creation lies in small businesses and the informal sector. Government will support small businesses and entrepreneurs across the spectrum, from informal enterprises to high-growth, high-tech start-ups. To create a thriving start-up ecosystem, South Africa will leverage its existing strengths, such as high-quality broadband infrastructure, strong capital markets, and deep talent pool by creating an enabling environment to attract venture capital funding and encourage start-up founders to locate and expand their operations in the country. To unlock growth in informal employment, government will diversify township and rural economies to increase participation in new business models such as e-commerce in these localities, integrate a developmental approach to informal trading, reduce or remove the cost of trading permits for informal businesses, and expand non-bank lending to small businesses through providing guarantees and first-loss funding to scale successful models such as the SA SME Fund. Government will also improve access to funding for small and medium enterprises through its development finance institutions, such as the Small Enterprises Development and Finance Agency (SEDFA), the Industrial Development Corporation (IDC) and the National Empowerment Fund (NEF).

3.4.2 Accelerated growth of strategic industrial and labour-intensive sectors

South Africa's growth over the past two decades has been driven by sectors such as financial services that are less labour-intensive than those sectors that have declined such as manufacturing and textiles. This has contributed to rising levels of unemployment. In the medium term, there is an opportunity to drive growth in job-creating sectors such as services and agriculture while positioning the economy for future growth. Reindustrialisation will be a key goal of economic policy, focusing on sectors such as manufacturing, mining and the beneficiation of mining products, forestry and agro-processing in areas that demonstrate a strong comparative advantage.

Public-private cooperation will continue to be strengthened through the development and implementation of Master Plans for specific sectors. To better focus Master Plans, reviews will be done to assess their impact. Plans will be aligned to target value-add, jobs, the inclusion of women, youth, and persons with disabilities, and exports. New sectors, such as green hydrogen, cannabis, and hemp, will also be a key focus.

In support of the Master Plan efforts and to ensure coherence across the system, an important intervention will be to review current incentives and sector support programmes to ensure that these promote scalable investments, are results-based and achieve the intended returns. Key outcomes sought include inclusive growth and jobs, particularly for women and the youth and persons with disabilities.

The Agriculture and Agro-processing Master Plan (AAMP) was developed through the larger collective social compacting approach. It makes an important contribution to growth and transformation and ensures food security. The AAMP programme's job creation will depend on various smaller, more localised, and sectoral activities led by the private sector. This includes expanding agricultural production and increasing market access for black farming enterprises, including small-scale and emerging farmers, women and youth. The sectors concerned will produce clear, pragmatic action plans and prioritised targets for the mid-term and five-year period. They will implement Master Plans jointly with business and labour partners. The global business services sector is among the fastest growing in South Africa, providing outsourced services such as call centres to the global export market. The sector has demonstrated employment growth of 24% year-on-year since 2015 and has the potential to create 500 000 additional jobs by 2030. Similarly, the digital and technology sector has significant potential to drive job growth in digital services ranging from database management to software development and cloud services. Industry surveys suggest that more than 30 000 digital jobs are currently outsourced by South African firms and could be restored, while there are currently 66 000 unfilled vacancies in the sector.

The agriculture sector has significant potential for job creation in labour-intensive crops such as citrus, table and dried grapes, subtropical fruit, avocados, berries and nuts. The NDP targets an additional 1 million jobs in agriculture by 2030, with the majority of these coming from labour-intensive crops produced for export markets. Growth in agriculture can be supported through expanding access to new markets, particularly in Asia; providing blended finance to emerging farmers; enhancing plant and animal health infrastructure and sanitary protocols; and addressing inefficiencies in ports and rail, especially at the port of Cape Town. The hemp and cannabis sectors have the potential to create jobs at scale if legal and regulatory barriers are removed and an enabling environment, including support for small-scale farmers in the Eastern Cape and KwaZulu-Natal, is created for businesses to expand. In the agricultural sector in general, it is critical that the

risks posed by climate change are factored into the entire value chain. Proactive adaptation measures will be implemented, including support for climate resilient agricultural production.

In the mining sector, South Africa has a unique opportunity to provide critical minerals to power the global energy transition, including the industrial manufacturing of clean technologies, with large endowments of platinum group metals (PGMs), manganese, chromium, vanadium, and other minerals. A supportive and enabling policy environment is key to exploiting this opportunity. A key target is to implement a modern and transparent mining rights system to enable greater investment in exploration and expand mining production. This will also support the processing and beneficiation of minerals domestically, for example through battery manufacturing, to enable South Africa to export greater numbers of value-added and finished products rather than raw commodities. Mining exploration will be supported through clearing the backlog of mining rights applications and through mechanisms such as the Junior Mining Exploration Fund.

3.4.3 Enabling environment for investment and improved competitiveness

Government will continue to implement reforms to reduce regulatory burdens and make it easier to do business in South Africa. This will include work to review sector-specific regulatory policies and legislation to cut red tape and enhance efficiencies, including digitising and standardising licensing systems and the establishment of an e-register. There will also be a focus on lowering costs associated with administered prices.

Red tape reduction will support an enabling environment for Micro, Small and Medium Enterprises (MSMEs), township and village enterprises, formal, start-ups, and informal enterprises. The existing informal economy will also continue to provide sources of livelihood for community-based citizens who are unable to find work in formal markets. The Department of Small Business Development will target 1.055 million small businesses by the end of the term. Government will launch One Stop Shops across all provinces to make it easier for small and medium enterprises to be established.

Significant progress was made during the 6th Administration in implementing structural reforms to enable economic growth with a focus on modernising network industries. These structural reforms have been supported by OV. The progress made by this initiative provides a solid platform on which the 7th Administration can build to achieve a sustained increase in the rate of economic growth and a reduction in poverty, unemployment and inequality. The immediate priority of the MTDP 2024–2029 is to sustain the momentum already developed and follow through on the implementation of these reforms. OV will continue with initiatives to realise their full impact. This will require completing the reforms underway, including reforms in the energy, logistics and water sectors and the visa system, which have been prioritised for their impact on economic growth.

An immediate priority is to complete the reform of the energy sector to enable competition in electricity generation and drive investment in new generation capacity. These will ensure energy security and enable a boom in fixed investment and will therefore be the main driver of economic growth in the coming years. Regulatory reforms have already unlocked substantial investment in generation capacity, with more than 120 large-scale projects being tracked by the Energy One Stop Shop with a combined capacity of over 22 500 MW. The amendment to Schedule 2 of the Electricity Regulation Act allows generation facilities of any size to wheel power across the grid and sell power to multiple customers. This has created a vibrant market for private generators supplying commercial and industrial customers. The registration process for generation projects has been substantially simplified to shorten timeframes for project approval.

The Electricity Regulation Amendment Act 38 of 2024 goes a step further by providing for the establishment of an independent transmission company that will act as the system and market operator. This legislative reform, which supports the ongoing restructuring of Eskom, will enable the emergence of a competitive electricity market. Over time, this will allow multiple generators to sell power in a market in addition to long-term bilateral agreements, as well as participate in markets for reserves and ancillary services. The rules of a future market will be determined by a market code and are already in development. While Eskom will continue to generate most of the country's electricity, these reforms will introduce competition from private generators, driving greater efficiencies in Eskom and ultimately reducing electricity costs and ensuring the security of supply.

In the logistics sector, the Freight Logistics Roadmap will be implemented to enable private sector investment and participation in ports and rail, increasing competition and efficiency while ensuring that network infrastructure remains state-owned. The centrepiece of the roadmap is the introduction of a vertically separated model in rail, which will enable competition in rail operations and private sector participation on a level playing field. Open access to national rail infrastructure is designed to increase the volume of freight moved by rail and improve the quality of rail services through the introduction of competition. As a critical starting point for reform of the rail system, a separate infrastructure manager will be established for the rail network as part of the restructuring of Transnet. The infrastructure manager will initially be established as an operating division of Transnet, separate from Transnet Freight Rail, and will subsequently transition to a subsidiary of Transnet in its own right, with a separate board.

Similarly, vertical separation of infrastructure ownership and terminal operations will be undertaken in the ports sector through completing the establishment of the National Ports Authority as a subsidiary of Transnet. As outlined in the National Commercial Ports Policy and the National Ports Act 12 of 2005, the National Ports Authority will be the landlord of South African ports and will own port infrastructure. Greater private sector

involvement in operations will be sought through leases and concessions, while the allocation of leases or concessions will be open to competitive bidding.

These reforms will fundamentally transform South Africa's freight logistics system, ensuring that port and rail infrastructure remains state-owned while introducing private-sector participation and hence competition in operations to significantly increase the volume of goods that can be transported for export and improve the efficiency of doing so.

Reform of the institutional structure of the water sector will be completed. This will include the establishment of a National Water Resources Infrastructure Agency (NWRIA) to ensure effective programmatic implementation of bulk water projects and mobilisation of off-budget finance for their implementation. Included in this reform will be the establishment of Catchment Management Agencies (CMAs) to regulate water use and safeguard South Africa's water supply. These reforms are far advanced and will enable a significant improvement in the custodianship of water resources.

To halt and reverse the deterioration of municipal water services, government will amend the Water Services Act (WSA) to empower the Minister of Water and Sanitation to intervene where necessary. Effective service provision requires that the national government be empowered to regulate municipal water supply authorities and require the appointment of competent water service providers where direct municipal management has failed. Government will also pursue criminal charges against mayors and municipal managers for contravention of the National Water Act, for example, where untreated sewage is released into rivers.

Following the establishment of the Water Partnerships Office, government will support the introduction of private-sector participation in areas such as wastewater treatment, non-revenue water, desalination, and water re-use. This will enable significantly greater investment in water infrastructure in areas where a revenue stream can be established while retaining public ownership of water assets.

Reforms will be implemented to modernise South Africa's visa system and attract skills and investment. The South African labour market has an acute demand for skilled labour along with high levels of unemployment among the low-skilled and unskilled. This is not a uniquely South African problem, as increasing global mobility has resulted in a highly competitive market for skills, enabling workers to move frequently between companies and countries.

A key priority is to implement the recommendations of the work visa review. This includes establishing a points-based system for skilled visas that will provide more flexible pathways for skilled immigration based on criteria such as qualifications, experience, and income. In addition, the remote work visa, which allows visa holders to enter South Africa for up to 12 months while working for a foreign-based employer, will be fully operationalised

and actively promoted in key source markets. The Trusted Employer Scheme, launched in October 2023 to provide a streamlined application process for major investors, will be opened to additional qualifying employers. To achieve the full benefit of these reforms, the backlog of existing visa applications will be cleared, and the processing time for visas reduced through additional capacity and improved systems.

These reforms will fundamentally change the structure of South Africa's key network industries and increase potential growth, helping to propel the economy to a new high-growth trajectory.

3.4.4 Increased infrastructure investment, access and efficiency

Infrastructure investment will be leveraged through the National Infrastructure Plan (NIP) focused on priority sectors. Government is targeting over R1.2 trillion in public sector investment over the term. Creating an enabling environment for private sector investment will also be a priority. The complexity of the Public-Private Partnerships (PPP) regulatory framework will be reduced as part of the reforms to promote economic growth and improve service delivery. Supported by the structural reform programme, infrastructure investment will focus on network industries, including energy, water, telecommunications and transport. In addition, this will support social infrastructure projects that improve access to basic services and job creation.

To grow the economy and reduce unemployment and poverty, capital investment by the public and private sectors needs to significantly increase. Gross fixed capital formation is currently at less than half the 30% of GDP target in the NDP. Reaching this target will require a massive ramp-up of public and private investment in infrastructure. Given the limited fiscal resources available, priority will be given to involving private sector partners through innovative financing models that leverage public funds.

In support of these initiatives, the National Treasury, the Department of Public Works and Infrastructure, Infrastructure South Africa, and the Infrastructure Fund will work together to establish an effective policy, regulatory and institutional environment for infrastructure, and to increase public and private funding. The complexity of the PPP regulatory framework will be reduced through revised PPP regulations. Infrastructure South Africa will continue to support the development of a robust project pipeline and will expedite approvals for strategic infrastructure projects (SIPs). The Budget Facility for Infrastructure (BFI) and the Infrastructure Fund will provide support for planning, technical assessment, budgeting, and execution of large infrastructure projects. Key interventions will include the Infrastructure Technical Assistance Facility (ITAF) in the National Treasury improving regulations, mobilising skills and expertise, and supporting integrated infrastructure planning, among other key interventions. All these steps will support an increase in infrastructure investment over the next five years through a well-functioning infrastructure ecosystem.

Several major infrastructure projects, already planned or underway in various sectors, will drive increased investment over the coming years. These include 11 strategic projects in the water sector with a value of R115 billion, such as the Lesotho Highlands Water Project Phase II, the Mokolo-Crocodile River Project, and the uMkhomazi Water Project. The South African National Roads Agency Limited (SANRAL) will implement 15 major projects on toll and non-toll routes, with a combined value of R19 billion. These and other SIPs will be prioritised to ensure their successful implementation in this period.

3.4.5 Improved energy security and a just energy transition

The NDP outlined the challenge for the country's energy transition to address threats posed by climate change. This transition has a particular impact on the electricity sector and will have substantial social and institutional implications. The NDP's overarching goals for the energy sector are to promote:

- Economic growth and development through adequate investment in energy infrastructure. The sector should provide a reliable and efficient energy service at competitive rates while supporting economic growth through job creation;
- Social equity through expanded access to energy at affordable tariffs and targeted, sustainable subsidies for needy households; and
- Environmental sustainability through efforts to reduce carbon emissions and build resilience for effective adaptation to the effects of climate change.

Government must continue to implement the EAP to achieve long-term energy security. The National Energy Crisis Committee will continue to remove barriers to new generation capacity while creating a conducive environment for independent power producers. New generation capacity will be procured in line with the updated Integrated Resources Plan (IRP). The implementation of the Transmission Development Plan (TDP) will be expedited to roll out the expansion and strengthening of the transmission network and to allow newly completed projects to be connected to the grid. As South Africa seeks an appropriate balance between responding to climate change concerns and employing least-cost power generation technologies to propel economic growth, it will adopt a 'least regret' approach to ensure that the country remains competitive throughout the transition to a low-carbon future.⁶⁸

Since the announcement of the EAP in July 2022, significant progress has been made in addressing the immediate electricity supply shortfall. Nevertheless, South Africa's energy supply remains inadequate and the need to achieve a secure, reliable, affordable and sustainable energy supply is paramount. The green economy

⁶⁸ NPC. 2012. 'National Development Plan', 169.

holds significant job creation potential as the world undergoes a fundamental economic shift over the coming decades in response to climate change. Government will continue to implement the EAP to achieve long-term energy security while propelling green growth.

South Africa's solar and wind resources are among the best in the world, providing a powerful source of competitive advantage. A massive rollout of solar photovoltaics (PVs) and wind capacity, combined with battery storage and gas to manage variability in power generation, will have a dual benefit. It will end the electricity shortfall while also transitioning the economy to cheap, low-carbon energy sources to protect the competitiveness of export products. This will be achieved through a combination of accelerated procurement through the renewable energy programme and private investment in generation capacity. By transitioning the country's energy system to renewable energy sources, a green manufacturing sector can be created. Centred on the export of hydrogen and associated products such as green ammonia, green kerosene and green steel, electric vehicles and renewable energy components, this will be the main driver of growth and job creation in the next decade and beyond. It will also assist with upstream industrialisation. Initially, imports of inputs for the energy transition will be relatively high. However, this will reduce over time as local content requirements enable the growth of local input industries, in particular the steel industry that could be revived by the requirements of the grid transmission build programme. In addition, this will enable South Africa's heavy industry and hard-to-abate sectors to respond to the imperative to reduce their carbon emissions and retain their competitiveness.

An updated IRP will be finalised to outline a long-term pathway for South Africa's energy system and guide the procurement of new generation capacity from multiple sources. The IRP will determine the pathway that is both 'least cost' and compatible with energy security and climate commitments and will ensure a diverse energy mix. It will outline a decommissioning schedule for the existing coal fleet that enables our Nationally Determined Contribution (NDC) to be achieved. It will also support the transition to a low-carbon economy and climate-resilient society while ensuring a secure energy supply and avoiding load shedding.

Government will focus its efforts in the next five years on expanding and strengthening the transmission network to enable new generation capacity to be connected in areas with strong wind and solar resources, such as the Eastern Cape, Northern Cape and Western Cape. Through the TDP, government will build over 14 400 km of new high-voltage transmission lines. This will be one of the largest infrastructure projects in South Africa's history. Not only will it resolve the country's energy supply challenge, but it will also spur industrialisation across the value chain. Given the urgent need to expand the transmission network and the amount of capital investment required, an Independent Transmission Projects Policy Framework will be developed to establish a mechanism for private sector investment in transmission infrastructure.

The just energy transition will require considerable investment to transform the domestic energy sector and replace the dominance of coal. While this process will create significant economic benefits, including job creation, the impact on communities and workers who are dependent on the coal value chain must be addressed. To this end, the Just Energy Transition Investment Plan (JET IP) and the JET Implementation Plan will be put into effect to ensure that South Africa's transition to a low-carbon economy supports communities and workers in Mpumalanga and other affected areas while enabling South Africa to meet its climate commitments. The JET-IP outlines specific investments in the electricity, green hydrogen and new energy vehicles sectors amounting to approximately R1.5 trillion over five years, in addition to investments to ensure a just transition.

In line with the Climate Change Act 22 of 2024, government will support the development of context-appropriate and sector-driven climate change mitigation and adaptation strategies. A Climate Change Response Fund will be established to counter the severe effects of climate change and support adaptation efforts. Implementation of the Act will ensure that climate change mitigation and adaptation are prioritised by all spheres of government, and that clear targets are set and regularly monitored to ensure their implementation.

The energy transition is a society-wide, multi-decadal process. It requires whole-of-government institutional arrangements to enable effective coordination. The Presidency will provide leadership of the transition through the Just Energy Transition Project Management Unit (JET PMU), under the guidance of a dedicated inter-ministerial committee.

3.4.6 Increased trade and investment

South Africa has well-established international relations that must be leveraged to expand trade, tourism and cultural industries, exports, investment, science and technology. Interventions required to achieve this objective include maintaining existing relations with various economic blocs; identifying opportunities within the South African Development Community (SADC), Africa and globally, prioritising the implementation of AfCFTA; and strengthening South Africa's economic diplomacy.

Success in navigating the shifting geopolitical environment will require ongoing attention to strengthen the country's economic diplomacy capabilities and to use international relations as an economic enabler. Developing a local productive base is linked to deepening mutually beneficial linkages with the SADC and the continent through cross-border trade that supports industrialisation and infrastructure development.

The AfCFTA presents new opportunities for South African diplomatic and business engagements to improve trade and investment and increase South African exports to the rest of Africa while fostering integration and development across the continent. Over the medium term, South Africa will play a leading role in its implementation and will pursue strategic trade agreements to create new export market. A key intervention will be to build the economic diplomacy capabilities to undertake this work.

Estimates from the Economic Commission for Africa (ECA) suggest that the AfCFTA can boost intra-African trade by 52.3% by eliminating import duties and double this trade if non-tariff barriers are reduced. Through the gradual elimination of tariffs and reduced barriers to trade in services, Africa's income is expected to grow by US\$450 billion by 2035. South Africa's exports and imports have recovered since 2019, but trade with the rest of Africa accounted for only a small part of that. As of April 2024, trade with Africa accounted for 20% of exports and 7% of imports. Knowledge and understanding of AfCFTA instruments are crucial for South Africa's economic diplomacy.

Figure 3.4: Trade balance in constant 2023 prices, Q1 2010- Q1 2024

Source: South African Revenue Service, 2024

The African Union (AU) declared 2023 as the 'Year of the AfCFTA'. Intra-Africa trade features high on the policy reform agenda, with 54 AU member states making commitments and offers to eliminate tariffs on more than 97% of all tariff lines. Barriers to trade in services are also being reduced, and AfCFTA's Trade in Services Protocol has the potential to lock in the participation of the private sector and MSMEs that play a prominent role across the continent's services landscape. The adoption of the Protocol on Women and Youth in Trade and

Trade-driven Development will also help ensure that the implementation of the AfCFTA supports efforts to improve the economic empowerment and inclusion of women and youth, including in South Africa.

Various mechanisms have been established to support the implementation of the AfCFTA. The Guided Trade Initiative (GTI) will be a key driver to enlarge the scope of business participation beyond national borders, emphasising services trade in five priority areas which also involve robust MSMEs participation: tourism, transport, business services, communication services, and financial services. The AfCFTA Adjustment Fund (AF) will support member states and the private sector to participate in the new trading system and to deal with near-term disruptions such as tariff revenue losses.

Since 1994, government has promoted a strategic approach to external trade relations to support South Africa's industrial development and manufacturing capacity and, in turn, generate employment and reduce poverty and inequality. Government will address four imperatives in this regard during MTDP 2024–2029:

- Focus on reducing the high cost of investment and cross-border trade and address the structural decline in global competitiveness. This will include addressing constraints in the logistics, energy, and other network industries and regulatory barriers;
- Improve the export environment through a review of industrial policy, localisation initiatives and sector-specific policies;
- Establish a comprehensive and targeted export promotion strategy and export finance framework to address information asymmetries and ensure that appropriate financial products and services, such as export credit and insurance schemes, are available; and
- Implement practical partnerships between the state and sector-focused private sector bodies to promote investment, exports, and job creation in future-facing sectors in which South Africa has substantial opportunities.

A key focus will be to build closer diplomatic relations with BRICS+ to leverage trade and investment opportunities with the Global South. BRICS+ members account for 29% or US\$30 trillion of global GDP, 25% of global exports, 46% of the world's population, and 43% of global oil production. However, the government will not neglect traditional trading partners, such as the EU and the US, and will continue to work towards realising the benefits of the African Growth and Opportunities Act (AGOA). China's share of South Africa's exports increased from 1.8% in 2001 to 11% in 2022, while Africa's share increased from 15.5% to 26.7% during the same period.

Existing partnerships with Global North countries will also be strengthened to promote export growth and improve terms of trade. Since the negotiation and conclusion of the South Africa-European Union (SA-EU)

Trade and Development Cooperation Agreement in 1999, the EU is South Africa's largest trading partner, accounting for 22% of the country's total trade in 2021. Trade with the US and the UK is also significant. In 2022, AGOA provided duty-free and preferential access for South Africa to the US for goods worth US\$14.5 billion or R261 billion. Continuing to expand these trade relationships and exporting more value-added products, along with expansion into new and growing markets, will be an important part of the trade strategy in the future.

The tourism sector is among the most labour-intensive of any sector in the economy, with an annual estimated support of one job for every 12 inbound tourists. Tourism also offers opportunities to improve people's livelihoods in rural areas. The MTDP 2024-2029 aims to increase access to international tourism and increase the economic contribution of tourism to GDP.

South Africa has the disadvantage of being far from the wealthiest consumers. However, the country also has several comparative advantages, including natural beauty, well-managed national and other wildlife parks, a strong domestic aviation sector, hotel capacity and the personal services industry. The tourism sector was hit hard by the COVID-19 pandemic due to international travel restrictions. Although tourist numbers have been recovering, they were still below pre-pandemic levels as of December 2023. However, comparisons by Stats SA of international tourists between April 2023 and April 2024 show an improvement in arrivals from most countries.

To increase the number of international tourist arrivals, the current strategy of targeting existing markets while promoting South Africa to new markets will be continued. South Africa has significant potential to grow its share of the global tourism market by upgrading the e-Visa system to an Electronic Travel Authorisation (ETA) system with rapid processing times for new source markets such as China and India, improving airlift through new airline routes to South African airports, increased destination marketing and improving security at key tourist sites.

3.4.7 A dynamic science, technology and innovation ecosystem for growth

The NDP contains over 200 references to innovation, a testament to its importance for South Africa's economic and social development. South Africa performs poorly in formally measuring research spending, academic citations and patents granted, all of which are monitored by the Department of Higher Education (DHE). Innovation broadly contributes to the functioning and productivity of society. As recognised by the NDP, innovation occurs across multiple fronts apart from higher education, such as in industrial laboratories, government departments, corporate research units, parastatals, statutory research councils and non-governmental organisation (NGOs). These sites of research and innovation should be coordinated to take

advantage of new modes of knowledge production, economies of scale and opportunities presented by working across disciplines.⁶⁹

Innovation activities that transform economies and societies are not just technological. They also address the institutional innovations that are transforming the nature of work, production and the provision of various services through information technology. Both the basic and higher education sectors will play a critical role in producing the necessary human resources to improve South Africa's global competitiveness through training and by contributing innovative ideas, actions, processes and products to the country's economic performance. Promoting science, technology, engineering and mathematics (STEM) subjects, especially for girls and women, is crucial in this respect.

The Department of Science, Technology and Innovation (DSTI) Decadal Plan 2022–2032 supports a whole-of-government approach to innovation to ensure that policies in various areas (trade, competition, education and procurement, for example) work together to support innovation.⁷⁰ The MTDP 2024–2029 will thus adopt a 'whole-of-society' strategy towards harnessing science, technology and innovation for rapid, inclusive and sustainable economic growth. This will include supporting public-private partnerships to leverage existing innovation and research towards commercial activities. In particular, the focus will be on MSMEs to increase their participation in new and emerging sectors and to increase funding towards the commercialisation of MSME innovations.

3.4.8. Supportive and sustainable economic policy environment

To support the interventions outlined in the sections above and to put forward a coherent narrative regarding South Africa's economic policy, the Presidency, together with the National Treasury, will coordinate a process to integrate an economic strategy for macroeconomic, trade, industrial and innovation policy for a sustainable fiscal outlook. This will include implementing an integrated economic strategy for macroeconomic, trade, industrial and innovation policy and outlining the key drivers of growth, considering both macroeconomic and microeconomic factors.

⁶⁹ NPC. 2012. NDP, 326.

⁷⁰ Department of Science and Innovation. 2022. 'Science Technology and Innovation Decadal Plan', 21, <https://nstip.naci.org.za/knowledge-base/strategies/185-science-technology-and-innovation-decadal-plan-2022-2032/viewdocument/185>.

3.4.9 Economic transformation and equitable inclusion of women, youth and persons with disabilities for a just society

The main developmental focus of the 7th Administration will be on the broader objectives of inclusive economic growth and reducing inequality, alongside promoting social transformation.

Economic empowerment interventions, explicitly targeting women, youth, and persons with disabilities (WYPD) are pivotal in achieving the NDP, MTDP, and GNU priorities relating to promoting inclusive growth and job creation. Despite significant advances in women's education levels, the employment rate of females has consistently been below that of males. In 2014, the male employment rate was 48.7% compared to the female employment rate of 36.9%. By 2024, the gender gap was at 44.9% for males compared to 35.8% for females⁷¹. In 2024, male employment levels were higher than females in all age categories.

These figures also demonstrate the low levels of youth employment, with young, black African women being the worst affected by unemployment. High youth joblessness poses both a threat and an opportunity. On the one hand, increasing numbers of young people seeing themselves as excluded from reaping the fruits of democracy lay the basis for social instability. On the other hand, the youth dividend points to the opportunity to harness the energy and potential of young people towards building an inclusive economy and a more prosperous South Africa.

There is substantial evidence in South Africa and internationally that gender-blind and gender-neutral programmes and interventions tend to merely reproduce the status quo or result in regression. The same is true for the inclusion of youth and persons with disabilities. Shifting towards more inclusive and equitable outcomes requires deliberate and explicit measures to ensure equitable representation of WYPD in employment creation and other economic initiatives.

The Constitution states: 'The state may not unfairly discriminate, directly or indirectly against anyone on one or more grounds, including race, gender, sex, pregnancy, marital status, ethnic or social origin, colour, sexual orientation, age, disability, religion, conscience, belief, culture, language and birth.'⁷² Similarly, no person may unfairly discriminate on these grounds. Various policies and laws are in place to prevent unfair discrimination and promote equity. However, more needs to be done to give effect to this constitutional imperative.

Various programmes have been implemented to target WYPD, including public employment programmes and MSME support. However, the scale of these programmes is not yet sufficient to make a significant impact. The

⁷¹ Statistics South Africa. 2024. *Gender Series Volume XI: Women Empowerment, 2014-2024*, 24.

⁷² Constitution of the Republic of South Africa. Section 9:3.

priority in the MTDP 2024-2029 period will be to improve the scale and impact of such programmes, particularly those that are most effective. Most importantly, the private sector creates the majority of jobs and can integrate businesses into its value chains. Inclusion therefore requires that further emphasis be placed on how the private sector can increase its contribution to the employment of WYPD and the integration of WYPD-owned businesses.

The participation of WYPD in the economy is profoundly influenced by multiple factors, including Gender-based Violence and Femicide (GBVF), access to basic services, housing, affordable and safe public transport, education and skills development, healthcare, quality of policing and, for women, unpaid care and domestic work. These will be covered in Strategic Priority 2.

While WYPD interventions are cross-cutting, the main priority areas are:

- Expanding private sector employment of WYPD in collaboration with business and labour in key economic sectors, including through Master Plans and priority sectors such as services, agriculture, manufacturing, mining, energy, and tourism;
- Expanding the number, size, and quality of WYPD-owned enterprises, including through a multi-pronged and optimised strategy of proactive support and improved access to enterprise development, public procurement opportunities, finance, skills and facilities. In collaboration with the private sector, the integration of WYPD enterprises in sector value chains will be enhanced;
- Building on past successes to further expand participation by WYPD in public employment programmes and facilitate pathways to sustainable livelihoods;
- Expanding equitable land ownership by WYPD. This includes strengthening land reform and prioritising the transfer of state land towards equitable access to and ownership of land for WYPD. Also important is improved post-settlement support by strengthening the institutional capacity of responsible structures and proactive interventions to empower WYPD farmers within the agricultural sector.

While government will promote such programmes, it will also strengthen partnerships with NGOs, the private sector, as well entities linked to the state, such as various youth employment initiatives and the National Economic Development and Labour Council (NEDLAC), to scale up programmes so that their benefits can be more broadly realised.

3.5 Key enablers and interlinkages

The achievement of the desired outcomes from the above strategic interventions will depend upon the following key enablers and interlinkages:

- *Effective cross-government coordination.* This will involve establishing effective arrangements across and beyond government fostering a unified approach to planning and implementing multi-agency partnerships. Clear lines of authority and responsibility for each component of the programme, including those that cut across institutional mandates, will be needed;
- *Clear policy goals and strategies.* Articulating well-defined policy objectives to be pursued and the strategies adopted to deliver them, including the phasing and sequencing of key interventions, will be required;
- *Adequate resource allocation.* Allocating sufficient human and financial resources to operational units responsible for implementation of each strategic intervention will be essential to empower these units to carry out their tasks and achieve the desired results;
- *Prioritised research and development (R&D) investment.* Investment in research and development initiatives that focus on practical applications, including for MSMEs will be important.
- *Efficient technology transfer.* Establishing effective mechanisms to facilitate the transfer of technology from research institutions to the market will ensure that innovative ideas lead to new business opportunities and economic growth.

The achievement of the goals of this strategic priority is dependent on the effective performance of the respective responsible state institutions, and thus on the success of the capable state interventions of Strategic Priority 3.

3.6 Key risks and mitigations

The primary risk to the successful implementation of the suite of interventions that comprise this Strategic Priority is political instability or a lack of agreement between political parties on key policy issues. An important measure to mitigate these risks has already been taken with the establishment of the GNU and the publication of its Statement of Intent. This should be underpinned by detailed governance arrangements to ensure that there is a coordinated approach across all government institutions. Mechanisms must be put in place to ensure efficient decision-making processes and swift implementation strategies to avoid policy paralysis.

A further risk is that the implementation of priority interventions might be delayed by a failure to achieve the necessary consensus beyond government and across society on key elements. It is relevant to note that policy disagreement and paralysis have been the root cause of the failure to achieve growth outcomes over the past decade. This risk may be mitigated by engagements with social partners in forums such as NEDLAC. However, given the current low levels of trust among political role players, the involvement of civil society and the recognition of its role in monitoring the implementation of the MTDP 2024-2029 and the contributions of the various GNU partners will be critical and must be supported.

It is essential to consider several key risks in the economy and in respect of unemployment. One significant concern is insufficient collaboration between the public and private sectors in the development and execution of sector specific industry Master Plans. To address this risk, fostering PPPs aligned with the public interest, particularly in creating labour-intensive jobs and promoting inclusive economic growth, should be prioritised. Another risk involves potential inconsistencies within the system, stemming from existing incentives and sector support programmes that do not effectively encourage scalable investments or deliver the desired outcomes. This risk can be mitigated by reviewing and refining current incentives and support programmes to ensure they are geared towards promoting scalable investments, are results-driven and achieve their intended objectives.

The complexity of the PPP regulatory framework may impede infrastructure investment. Simplifying this framework can alleviate this risk and encourage more robust investment. There is also a risk that direct public investment may not yield sustainable outcomes. It is therefore crucial to prioritise effective implementation strategies, such as engaging private sector partners. Such prioritisation can enhance investment performance and increase the likelihood of successful long-term operations.

The reproduction of the current inequitable distribution of opportunities by sex, age and disability remains a considerable risk. This requires explicit strategies by every organ of state to mainstream WYDP in all their programmes, planning and reporting systems and budgets.

3.7 Partnerships and contributions of the non-state sector

It has become evident during the recent past that partnerships between state and non-sector role players can be transformative. This is exemplified by initiatives such as the partnership between government and organised business through Business for South Africa (B4SA) to tackle pressing challenges such as energy, logistics, crime, and corruption. Various sector-based initiatives in which public and private organisations have a common interest to achieve specific outcomes, such as the Public-Private Growth Initiative (PPGI), have also made significant progress. These models of collaboration will be supported and strengthened in pursuit of the objectives of the MTDP 2024–2029.

It is therefore crucial to create confidence among all stakeholders that growth policies will succeed. As growth increases and the debt trajectory is stabilised, further spending on policy priorities will become possible. In the interim, innovative mechanisms to leverage private capital will be pursued in addition to the reprioritisation of existing resources towards the interventions outlined above. There is ample evidence of inefficiency in the performance of many functions of government which suggests that improved operational efficiency has the potential to yield savings that could fund new activities. With appropriate models in place, a further source of

financing for infrastructure projects are pension funds in both the public sector, through the Public Investment Corporation (PIC), the Government Employees' Pension Fund (GEPF), and the private sector.

The Presidency, working with the Department of Women, Youth and Persons with Disabilities (DWYPD) and other stakeholders, initiated the Women's Economic Assembly (WECONA), which brings together the private sector, businesswomen, government, women's organisations and civil society in a partnership to improve women's participation in the mainstream of the economy and contribute to strengthening the economy. The partnership focuses on various sectors and was launched by President Cyril Ramaphosa in 2021. This and related partnerships will continue to play a key role in achieving inclusive growth in South Africa.

3.8 Summary

Driving inclusive growth and job creation is the Apex Priority of the 7th Administration and is key to eradicating poverty, reducing inequality and unemployment, and the wider transformation of society. It is also central to realising the constitutional rights of WYDP. The priority over the next five years is to grow existing economic activity and associated employment by removing regulatory and other barriers to investment and creating a supportive enabling environment. To this end, shifting South Africa's economic trajectory and addressing the binding constraints on growth to secure private investment is key. The accelerated implementation of structural reforms through OV will also improve the performance of network industries, leverage private capital, enhance competition, and unlock investment. Simultaneously, building on the reforms initiated during the 6th Administration in the energy, logistics, telecommunications, and water sectors and the visa system reforms must occur. Interventions aimed at stimulating inclusive economic growth and job creation in the private sector will be complemented by enhanced public investment in employment.

CHAPTER 4

STRATEGIC PRIORITY 2: REDUCE POVERTY AND TACKLE THE HIGH COST OF LIVING

CHAPTER 4 STRATEGIC PRIORITY 2: REDUCE POVERTY AND TACKLE THE HIGH COST OF LIVING

4.1 Introduction

The NDP outlines several objectives aimed at alleviating poverty. The GNU Statement of Intent supports these objectives by emphasising the need to create a more just society through the following actions: addressing poverty, tackling spatial inequalities, reducing food insecurity, and lowering the overall cost of living. These goals will be achieved by establishing a social safety net, enhancing access to and the quality of basic services, and protecting workers' rights. Furthermore, the Statement of Intent commits to investing in people through education, skills development, and providing affordable, quality health care. Strategic Priority 2 reinforces these goals by outlining various interventions and targets designed to reduce poverty and address the high cost of living.

Most interventions under Strategic Priority 2 are part of the "social wage," which encompasses social grants, free basic services, no-fee schooling, school nutrition programmes, social housing, free primary healthcare, and subsidised public transport. The social wage significantly helps reduce the cost of living for low-income individuals and aims to eliminate absolute poverty. Additionally, it contributes to local economic development by fostering a healthier and more educated workforce, enhancing participation in the economy, and creating a more stable community environment in which businesses can thrive. These factors also support Strategic Priority 1, which focuses on building a more inclusive economy and promoting job creation.

4.2 Problem statement

Poverty, inequality and unemployment remain South Africa's three main developmental challenges. These remain key factors that threaten the nation's economy, social cohesion and the overall wellbeing of the country. In this context, the state's responsibility to provide social protection and a social wage that reduces the cost of living and thus contributes to poverty alleviation is more critical than ever. South Africa's constitutional democracy is founded on the values of human dignity, equality and freedom. These values are given effect, according to the Bill of Rights, through the achievement of equality, the advancement of human rights, freedoms and the attainment of the rights to enable a decent life, such as a clean environment, adequate housing, healthcare, sufficient food and water, social security and education. While the Constitution acknowledges that these rights cannot all

immediately be provided, the state is urged to take reasonable legislative and other measures, within its available resources, to achieve their progressive realisation.

The delivery of the various elements of the social wage faces several challenges. These include systemic bureaucratic inefficiencies and breakdowns, failures of basic services provision, often linked to a lack of institutional capacity, and the failure to respect the Batho Pele principles championed by the government since the late 1990s. Strategic Priority 3, which will be discussed in the next chapter, plays a key role here in building state capability.

The scale of the challenges can be gauged by the fact that the overall social wage accounts for almost 60% of government's non-interest expenditure, with education being the largest single budget item. Government thus faces a dilemma: the need to balance government expenditure between the different sectors that comprise the social wage and the other aspects of state expenditure, while still supporting poverty reduction. This means that in addition to optimising the social wage, government must sustain and expand the economic activities that fund the social wage.

4.3 NDP goals and objectives

The NDP focuses on improving the socio-economic well-being of South Africans through the broad social wage. The NDP also prioritises the rights of women, youth, people with disabilities and children (WYPD), as a crosscutting theme. The following are the objectives of the NDP:

- An inclusive social protection system that addresses all areas of vulnerability;
- A defined social floor, with no household living below this floor;
- Lowering the cost of living for the poor and ensuring the incomes of vulnerable groups be kept above the poverty line through various means, such as cash grants, public works programmes, training and other labour market incentives and social security mechanisms;
- No poverty-induced hunger, malnutrition and micronutrient deficiencies;
- Improved access to housing and greater spatial justice;
- De-racialising the rural economy, and ensuring democratic and equitable land allocation and use across race, gender and class;
- Raising the life expectancy of South Africans to at least 70 years;
- Reforming the health system leading to universal healthcare coverage, improved primary healthcare provision to families and communities, and ensuring that the generation of under-20s is largely free of HIV, and TB prevention and cure is progressively improved;

- Reducing maternal, infant and child mortality;
- Significantly reducing the prevalence of non-communicable chronic diseases;
- Ensuring South Africans have access to the highest quality education and training, with an education, training and innovation system that caters for different needs and produces highly skilled individuals;
- Allowing learners to take different pathways that offer high quality learning opportunities, with clear linkages between schools, further education and training (FET) colleges, universities of technology, universities and other providers of education and training;
- Establishing gender equality across all sectors, ensuring equal rights, opportunities and representation for women, full economic empowerment of women, with equal access to jobs, fair wages and leadership roles, and a significant reduction in gender-based violence and femicide (GBVF); and
- Reducing youth unemployment, and achieving universal access to education and vocational training to equip young people with relevant skills, and a high level of participation by youth in political and societal decision-making processes.

The MTDP 2024-2029 has maintained a focus on these NDP objectives, and Strategic Priority 2 aligns closely with several NDP chapters, including those addressing social protection (Chapter Eleven), health promotion (Chapter Ten), education, training and innovation (Chapter Nine), and building safer communities (Chapter Twelve). To achieve these numerous and critical outcomes under Strategic Priority 2, the MTDP 2024-2029 outline seven outcomes for this term.

4.4 Outcomes for Strategic Priority 2

The main developmental objectives associated with the priority of reducing poverty and tackling the high cost of living highlight various interventions for each developmental objective. The outcomes sought are:

- Reduced poverty and improved livelihoods;
- Improved coverage of social protection;
- Improved access to affordable and quality healthcare;
- Improved education outcomes and skills;
- Skills for the economy; and
- Social cohesion and nation-building.

4.4.1 Reduced poverty and improved livelihoods

The deep-rooted and multi-faceted nature of poverty in South Africa demands a comprehensive approach. In addition to the more targeted measures outlined in the MTDP 2024-2029, a range of other interventions will be implemented.

National minimum wage

The Department of Employment and Labour in consultation with the National Treasury will ensure that the national minimum wage is regularly increased, in line with inflation.

VAT on food and affordable basic foods

To ensure that all South Africans have affordable access to sufficient food, the basket of food items that is exempted from VAT will be reviewed to determine the additional items that can be included. This will lower the cost of living, especially for the most impoverished sections of the population. In partnership with the food industry and civil society, a new system will be introduced that will make an affordable basket of basic foods that are high in protein available.

Proper implementation of the indigent policy

To ensure that all South Africans can access a minimum level of basic services, municipalities are required to establish an indigent policy that governs eligibility to that package of services. Funding for these services is provided by the National Treasury to local governments in line with the income profile of each municipality's population. However, in many municipalities, the proportion of households that benefit from the equitable share is significantly lower than the number that qualify. In many cases, this is because poor people find it difficult to comply with the onerous administrative processes needed to qualify for indigent status. To respond to this, national and provincial governments will ensure that individual municipalities meet their obligations to ensure that the old, the infirm and the poor are assisted and supported so that they can benefit from the basic services as intended.

Reducing administered prices to enable poor people to access public services

In many areas, fees and prices for services are set administratively and the basis on which they are set is unclear. The poor are disproportionately negatively affected by this. During the MTDP 2024-2029 period, government will actively seek to identify those areas in which poor people are adversely affected by administratively determined prices and fees for public services and will take measures to reduce them.

Accelerate social housing in support of sustainable human settlements

The persistence of inappropriate settlement patterns is driven, in part, by the availability of land in urban peripheries where its development for low-income residential use is relatively cheap and largely uncontested. Strategically located land is still largely and disproportionately owned by the state and private owners. State-owned land in well-located areas will be a major focus of the MTDP 2024-2029. In many cases, this land is owned by SOEs and national government departments.

Development of housing by and for low-income households in more spatially favourable central areas requires more active zoning and development planning interventions. There should also be a strategic rebalancing between space-neutral policies (all areas have the same access to support); place-based policies (in which each area must set its own priorities); and spatial-rebalancing policies (in which certain areas are deliberately favoured to support spatial transformation).⁷³

The MTDP 2024–2029 will prioritise well located social housing and associated services. It will also support the development of more peripheral areas by land release and infrastructure service provision. To support the larger intervention programme, a related intervention will address the backlog of title deeds for subsidised housing, turning homes into household assets. We will review land-use, building and other regulations to enable low-cost property development. This will give households more flexibility to make their own decisions about location and respond to emerging opportunities.

Integrated public transport and spatial transformation of cities

The NDP acknowledges that ‘most South Africans live in a complex network of towns and cities, which generates about 85% of all economic activity’,⁷⁴ while recognising the interdependency and indistinct boundaries between rural and urban areas. South Africa’s cities are currently not fulfilling their role as engines of growth and centres of prosperity, and many rural areas are not sustainable areas of development. Spatial inequality is an important constraint on growth and job creation in South Africa, with many poor households forced to live far from economic opportunity due to the spatial structures imposed by apartheid. This results in economic exclusion, labour market frictions, and high transport costs, inhibits the growth of the informal sector, and creates negative externalities such as pollution and high carbon emissions. It is critical to the future of the national economy and for households to get South Africa’s large cities and towns working again. The MTDP proposes interventions that seek to

⁷³ Todes, A. and Turok, I. 2017. ‘Spatial inequalities and policies in South Africa: place-based or people-centred?’, *Progress in Planning* 123, 1–31.

⁷⁴ NPC. 2012. ‘National Development Plan’, 266.

integrate public transport, thus reducing household transport costs, and that transform the spatial economies and areas of cities and towns. Returning all passenger rail corridors to service and providing low-cost transport options for the poor and enabling integrated public transport networks will be a key focus over the medium term. Driving spatial transformation and community development will require sustainable urban planning that supports household's ability to access economic opportunities and employment in a more efficient manner. These reforms will be part of the phase 2 of Operation Vulindlela to ensure a coordinated approach.

4.4.2 Improved coverage of social protection

The 10-Year Review of the NDP reported significant early progress with poverty levels falling from 51% of the population in 2006 to 36.4% in 2011.⁷⁵ However, levels rose again to 40% in 2016, and the situation has continued to deteriorate since then. For example, between 2015 and 2020, the number of people living in extreme poverty (below the food poverty line) increased from 13.3 million to 19.4 million. In an effort to alleviate poverty, government will continue to roll out a comprehensive social security package within available fiscal resources. This will also entail protecting the real value of social grants against the effects of inflation. Government will also continue to optimise the social security package through administrative efficiencies and integrated systems to reduce areas of wastage and duplication.

The COVID-19 pandemic aggravated the poverty challenge. Government responded by introducing the SRD Grant. This complemented the Unemployment Insurance Fund (UIF) COVID-19 Temporary Employment Relief Scheme (TERS) support for formally employed persons who had lost their jobs. Some 8.5 million people now receive the SRD Grant, and its withdrawal would leave a glaring hole in the livelihoods of millions of the poorest South Africans. The MTDP 2024-2029 outlines the need to transition the grant towards a more sustainable form of income for the unemployed.

4.4.3 Improved access to affordable and quality healthcare

The health sector is institutionally and technically complex. The MTDP 2024–2029 seeks to put in place the key building blocks of longer-term universal health coverage. As a start the MTDP 2024-2029 will prioritise the strengthening of the primary healthcare (PHC) sector. This is to ensure that home and community-based services, as well as clinics and community health centres, are well resourced and

⁷⁵ NPC. 2022. '10-year Review', 5.

appropriately staffed to provide the promotive, preventive, curative, rehabilitative and palliative care services required for South Africa.

Achieve universal health coverage to address inequity and financial hardship

An overarching goal of the MTDP 2024–2029 in relation to healthcare is the need to promote greater equity between public and private healthcare provision. A structured process of health sector reform will be required to achieve greater equity. This process will be carefully sequenced to ensure the continuation and improvement of existing, effective services. To this end implementation of the National Health Insurance (NHI) will provide a foundation for action across both public and private healthcare platforms. The MTDP 2024-2029 also supports the broader reforms on NHI through the establishment of Ministerial Advisory Committees on health technologies and health care benefits, and an accreditation framework for health service providers. To this end, mechanisms will be established to ensure that the stakeholders in the NHI process will continue to be engaged and involved in the design and oversight of implementation. The NHI system will be implemented in phases designed to achieve universal access to healthcare and a reduction in the relative cost of private medical care.

Recognising that non-communicable diseases (NCDs) arise from both poverty and unhealthy lifestyles, priority must increasingly be given to strategic interventions to reduce the NCD burden to manageable levels in response to changing patterns of ill-health. The MTDP 2024-2029 will build on the 2022 Strategic Plan for the Prevention and Control of Non-Communicable Diseases, whose implementation and progress will be supported and monitored.

Improve capabilities and management of health personnel

The MTDP 2024–2029 will also have a renewed focus on strategic initiatives to address the health sector's institutional and financial arrangements. Critical among these are actions to build the sector's human resource capabilities through the Human Resource Strategy. Training arrangements will also be reviewed during the MTDP period and consideration given to the development of training partnerships with private sector health institutions.

Facilities development and management

A robust facilities development and management programme is essential for achieving universal healthcare. The MTDP 2024–2029 will make improved healthcare infrastructure a cornerstone of an effective healthcare system. This will require a focus on maintenance and expansion of infrastructure and equipment and the procurement and management of consumables. Existing institutional arrangements may have to be reviewed and revised to ensure that the required improvements can be successfully delivered and sustained.

4.4.4 Improved education outcomes and skills

According to the NDP, South Africa’s education system needs urgent action to improve the quality of its outcomes. The MTDP 2024–2029 prioritises the implementation of the 2030 Strategy for Early Childhood Development (ECD) as the foundation for the education system. This will require improvement in cross-departmental and inter-governmental coordination involving all departments that have an influence on development over the child’s first 1 000 days.

In basic education, the MTDP 2024–2029 also prioritises improvements in reading and mathematics, especially at Grade 3 level. Other interventions will include improved lesson plans, graded reading books and individualised coaching of teachers. These interventions should also improve learners’ successful progression through the system and reduce inequity by targeting poorly performing schools. The Minister of Basic Education will also introduce national policy, norms and standards and regulations to empower all partners in basic education to support the implementation of the Basic Education Laws Amendment Act.

4.4.5 Skills for the economy

The MTDP 2024–2029 identifies that the immediate priority for Post-school Education and Training (PSET) is to address the deepening distortion of the intended shape of the sector and the failure to grow the size, quality and credibility of the college sectors. This distortion of the system is reflected in the high proportion of the youth population in the category of not in employment, education or training (NEET) without any formal skills.

There is a need to ensure that the PSET sector produces the skills required by the economy. This will require a strengthening of partnerships with the private sector for the design of curricula, and the unlocking of workplace learning opportunities for graduates. Interventions will also be focused on strengthening the quality and capacity of technical and vocational education and training (TVET) and

community colleges and providing strategies to improve quality in staffing and articulation pathways for National Certificate: Vocational (NCV) students.

The MTDP 2024-2029 will also prioritise the reform of the Sector Education and Training Authority (SETAs), a long outstanding matter, in line with a demand-led skills strategy for the economy. The NSFAS will also be reviewed to ensure that student funding prioritises targeted skills and sectors. Interventions will be programmed and sequenced to stabilise the quality of the PSET sector in with progressive expansion.

4.4.7 Social cohesion and nation-building

Nation-building, social cohesion and unity in diversity is one of the foundational principles of the Statement of Intent, echoing the NDP. Its minimum programme of priorities includes strengthening social cohesion, nation-building and democratic participation, and undertaking common programmes against racism, sexism, tribalism and other forms of intolerance.

The NDP identified the following as critical in the nation-building effort:

- Knowledge of the Constitution and fostering constitutional values;
- Equalising opportunities, promoting inclusion and redress;
- Promoting social cohesion across society through increased interaction across race and class;
- Promoting active citizenry and broad-based leadership; and
- Achieving a social compact that will lay the basis for equity, inclusion and prosperity for all.

Promote and protect South Africa's diverse languages and cultures

The MTDP 2024–2029 will outline more targeted responses to promote South Africa's languages and cultures. The Department of Basic Education (DBE) will promote mother tongue-based learning and workbooks, especially at foundation phase.

Promote programmes to combat racism, sexism and other forms of intolerance

South Africa continues to suffer racism, sexism and various other forms of intolerance, including xenophobia. Many forms of intolerance in South African society, including racism and xenophobia, are related to socio-economic problems and must be addressed through strategies for socio-economic redress. Additionally, the relevant Chapter 9 institutions will promote tolerance and the embracing of

diversity, and for the emergence of a shared South Africa identity and national pride. The DBE will also consider including anti-racism, anti-sexism and tolerance education into the curriculum throughout primary and secondary school levels. The Department of Sports, Arts and Culture (DSAC) will make funding available to produce media content that promotes tolerance and opposes racism, sexism, xenophobia and other intolerant attitudes.

This important task also requires a whole-of-society approach. As such, the national dialogue will galvanise society at various levels, including trade unions, community organisations, social movements and faith-based organisations to develop education programmes and campaigns to address these challenges at community level.

Implement a national civic education campaign on the Constitution, including at all public and private schools

Institutions across South African society, especially government, the corporate sector, labour movements, civil society generally and faith-based organisations need to be galvanised around a common civic education programme. Partnerships with all forms of media are essential. The Constitution will serve as the starting point and basis for such a programme. The DBE will ensure that civic education forms part of the curriculum for learners.

Promote the involvement of key stakeholders to strengthen social cohesion

While social cohesion is the responsibility of all South Africans, specific institutions and individuals will be brought together to work actively in the social cohesion framework. The national dialogue process will be responsible for convening the forums that will bring these diverse stakeholders together. These will include the state, SOEs, Chapter 9 institutions, traditional leaders, business, labour, non-governmental organisations (NGOs), social movements, organisations focused on social cohesion, student and youth organisations, and faith-based organisations. Out of the national dialogue process, a multi-stakeholder social cohesion and reconciliation committee (SCRC) will be established and located in the Presidency. Apart from general promotion of social cohesion, the SCRC will prepare an annual reconciliation and social cohesion gauge for presentation to the Presidency and Parliament, and will investigate and make recommendations on socio-economic interventions to strengthen social cohesion and build the nation.

Supporting the rights of women, youth, people with disabilities and children

Several targeted programmes in entrepreneurship will be implemented to support women, youth and people with disabilities. This will be achieved by providing access to finance, mentorship and markets. Government will ensure that small businesses and cooperatives owned by these groups will be included in value chains in the public and private sectors. Regulations, policies and, if necessary, legislation will be instituted to address the gender pay gap and ensure equal opportunities for all in the workforce.

4.5 Key enablers and interlinkages

The key enabler to ensure the achievement of the goals of Strategic Priority 2 will be to generate sufficient financial resources to fund the necessary operations, income transfers and related support activities. It is also recognised, however, that the achievement of Strategic Priority 2 will depend on the effectiveness of the state institutions responsible for operationalising the respective interventions. In this regard, many of the interventions to be undertaken under Strategic Priority 3 will be key enablers. While the primary objective of improving coordination, accountability and priority setting across government is critical, it will also be important to ensure successful outcomes regarding the strengthening of local government, since the local sphere is directly responsible for a significant number of the interventions of Strategic Priority 2.

4.6 Key risks and mitigations

Strategic Priority 2 aims to enhance the quality and coverage of social programmes, improve service delivery and ensure sustainable funding. However, several risks have the potential to hinder the achievement of these goals. Socio-economic instability and fiscal constraints could limit the government's ability to sustain and expand social wage programmes. Socio-political instabilities could undermine the effectiveness and continuity of social programmes, leading to inadequate coverage and support for the most vulnerable populations. Rapid population growth and urbanisation could strain social services and make it challenging to maintain and optimise the programmes.

In terms of social protection, proposals for a basic income support aim to reduce the risk that competing initiatives might produce suboptimal and fragmented results. It is equally important to avoid the risk of policy paralysis that could impact on continued support to the individuals and communities concerned. However, the scale of the programme makes the possibility of failure during the implementation phase a significant risk. A related risk is the failure to effectively manage the

balance between grant-based income support and the wider set of free services that constitute the social wage that poorer communities could otherwise not afford. Gaps in social protection programmes may leave certain vulnerable groups without necessary support. To mitigate these risks, centralised leadership is important for coordinating social protection efforts for South Africa's people, ensuring alignment and commitment across different institutions and protecting basic public services.

Two significant risks in respect of health interventions are the potential failures to integrate public and private facilities and to secure sufficient financial resources for the NHI. To mitigate these, it will be important to give careful attention to the planning and phasing in of the NHI. Early collaboration between key stakeholders will facilitate the gradual introduction of joint activities. An associated risk is that there may be public misunderstanding of the intent and implementation schedule of the NHI. To avoid this, an ongoing campaign of public information will be required. This should provide clear practical examples of tangible progress. These could include early implementation of shared approaches to basic primary healthcare programmes such as vaccination and screening, and functions such as the dispensing of medicines.

The primary risk in the education sector is the potential impact of budget cuts. This will especially be the case for inputs that have made progress possible such as access to learning and teaching support material (LTSM) and learner-supporting interventions such as national school nutrition. To mitigate these, substantive reprioritisation should be done to address the policy sprawl that has dispersed limited human and fiscal resources. There will also be better alignment between national and provincial planning for basic education and ECD, while rationalising programmes that no longer add value. A further risk is that a failure to implement ECD successfully and at scale will prejudice the ability of future cohorts of young people to benefit fully from basic education. The most important mitigation measure will be to ensure that ECD programmes are widely implemented.

Special attention should be given to including the poorest and most marginalised communities whose children are most likely to be left behind. Other risks are that indicators may be chosen that are not meaningful in medium-term frameworks such as the periodic assessments (international and national) that are conducted at intervals of several years. Annual planning requires indicators that are more frequent and immediate and can guide practice. To mitigate this risk, medium-term targets and interventions must be linked to resource allocation to ensure that the necessary human and material resources are available.

4.7 Partnerships and contributions of the non-state sector

Many non-profit, community and faith-based organisations and other civil society bodies have community memberships that can and do provide frontline and monitoring support of social security, health and education programmes. These play a crucial social welfare role in supporting individuals and households in situations of acute distress. They also provide similar support in education, particularly in ECD programmes and through school governing bodies. Active partnerships create trust in communities, and coordination between the state and civil society bodies will become regular and routine. The private sector plays an important role in providing work-based learning, which is a formal requirement for some students to obtain their qualifications, and is a vital contribution to more practically oriented training programmes.

4.8 Summary

The primary developmental focus of the 7th Administration will be on increasing economic growth and reducing inequality. However, it is crucial to promote social transformation in economic participation to ensure a more inclusive economy. Existing programmes that support women, youth, and people with disabilities in entrepreneurship and employment will be streamlined and optimised. While the government will promote these programmes, it will also strengthen partnerships with non-governmental sectors and entities linked to the state, such as various youth employment initiatives, to expand successful programmes so that their benefits can be more widely experienced. Legal measures will be implemented to address the gender pay gap and ensure equal opportunities for everyone. A strong emphasis will be placed on addressing spatial injustices by directing capital investment spending toward the National Spatial Action Areas identified in the NSDF. Additionally, legal regulations will be implemented to address the gender pay gap and ensure equal opportunities for everyone. There will be a strong emphasis on tackling spatial injustices by directing capital investment spending to the National Spatial Action Areas identified in the NSDF.

CHAPTER 5

STRATEGIC PRIORITY 3: BUILD A CAPABLE, ETHICAL AND DEVELOPMENTAL STATE

CHAPTER 5 STRATEGIC PRIORITY 3: BUILD A CAPABLE, ETHICAL AND DEVELOPMENTAL STATE

5.1 Introduction

Strategic Priority 3 aims to build a capable, ethical, and developmental state. This is essential for achieving Strategic Priorities 1 and 2. To achieve inclusive growth and job creation, a capable government is necessary, as it plays both direct and indirect roles within the economy. The direct roles are carried out by major SOEs while indirectly, government influences the economy through key regulatory and fiscal instruments. Therefore, a professional and competent state is crucial for the economy's functioning and the well-being of its citizens. This chapter will outline key reforms aimed at professionalising the state, with a particular focus on local government and SOEs. Additionally, Strategic Priority 3 seeks to strengthen law enforcement agencies to combat crime, fight corruption, and eliminate gender-based violence, while also enhancing national security capabilities. The MTDP 2024-2029 will prioritise efforts to address key crimes and modernise law enforcement agencies. In terms of our international relations, the MTDP 2024-2029 promotes a foreign policy that supports human rights and peace while strengthening ties within Africa and with the broader world.

5.2 Problem statement

Progress has been made over the past three decades. However, South Africa has made limited progress on the aspirations of the NDP. This reflects the broader problem of an implementation gap as a result of institutional weaknesses and a lack of coordination. The deterioration in the performance of the state and the values of public service is associated with a broader decline in social values and a greater emphasis on individual rather than collective interests.

An immediate challenge is the declining performance of the local government sphere. This sphere is critical because it is responsible for delivering basic services to South Africans. If this sphere cannot provide and sustain the services to which it is bound in terms of the Constitution, the people and the economic and social institutions on which they depend cannot function. Local governments also face additional challenges, including financial constraints, that limit their ability to deliver essential services.

The following are some of the weaknesses to which the MTDP 2024-2029 responds through its interventions: weak governance systems, with ineffective oversight accountability mechanisms; shortages of skilled personnel, particularly in specialised areas; corruption that siphons off public

resources, erodes public trust and hinders service delivery; criminality and a lack of safety, including such priority crimes as murder and gender-based violence and femicide (GBFV); lack of a feeling of safety among particular groups, such as women, youth and persons with disabilities, the elderly and children; and increasing insecurity and violence in Africa and globally.

To address these challenges effectively and rebuild the state into a capable, ethical and developmental entity, a culture shift in both the state and broader society is required. The weaknesses in the state have had a substantially negative impact on all the areas of activity addressed by the other two Strategic Priorities.

5.3 NDP goals and objectives

The strategies to build a capable, ethical and developmental state are outlined in the NDP. The ultimate goal is to professionalise the public service and develop an ethical and collaborative culture. The NDP set out eight areas in which targeted action on state capacity is particularly important:

- Stabilise the political-administrative interface;
- Develop technical and specialist professional skills;
- Strengthen delegation, accountability and oversight;
- Improve interdepartmental coordination;
- Strengthen local government;
- Clarify the governance of SOEs;
- Take a proactive approach to improving relations between national, provincial and local government; and
- Make the public service and local government administration careers of choice.

Strategic Priority 3 aligns closely with the NDP's Chapter 13 on 'Building a capable and developmental state', drawing also on other NDP chapters related to strengthening of the state. Four broad areas of alignment between the two documents are: strengthening the Centre of Government to improve planning, coordination and management across the state and professionalising the public service; strengthening the public procurement system; reducing crime, including corruption; and working with different role players to address various challenges at local government level.

Some of the specific interventions in this regard include strengthening the role of the Presidency; strengthening the role of the Public Service Commission (PSC) to oversee the appointment of the senior managers and heads of SOEs; building capacity in relevant departments to tackle crime and corruption; strengthening whistle-blower protection; increasing accountability and consequence

management in the public service; working with communities to fight crime; and addressing insecurity and violence on the African continent and globally.

5.4 Outcomes for Strategic Priority 3

Strategic Priority 3 seeks to build a capable, ethical and developmental state. The 7th Administration will work towards the following outcomes:

- Improved service delivery in the local government sphere;
- Improved governance and performance of public entities;
- An ethical, capable and professional public service;
- Digital transformation across the state;
- Mainstreaming of gender, empowerment of youth and persons with disabilities;
- A reformed, integrated and modernised Criminal Justice System;
- Effective border security;
- Secured cyber space;
- Increased feelings of safety of women and children in communities;
- Combat priority offences (economic, organised crime and corruption);
- Advance South African foreign policy for a better world; and
- Enhanced peace and security in Africa.

5.4.1 Improved service delivery in the local government sphere

The effective performance of local government is critical for both social services and local economic development. However, governance failures have negatively impacted the performance of local government. Factors contributing to these challenges include a lack of good governance, financial mismanagement, instability in the political-administrative interface and corruption. The MTDP 2024–2029 will focus on improving the performance of local government through a set of interventions to bring stability and address the professionalisation of the administration.

Improved service delivery at local government

The MTDP 2024–2029 proposes a review of the institutional and legislative frameworks of local government to strengthen them and support differentiation. The goal is to establish mechanisms for effective interventions when municipalities are unable to meet minimum norms and standards for service delivery. Approaches will be developed to assist local governments to create an environment

that promotes and supports local economic development. Other national departments, such as Water and Sanitation, Transport, Energy and Human Settlements, will also be mobilised to contribute in a structured and coordinated manner to strengthen local government.

Stabilise governance in key metros, restore financial stability and the delivery of services

The MTDP 2024—2029 also outlines interventions to stabilise governance in key metros, restore financial stability and the delivery of services and ensure sound long-term strategic plans to guide the metros. Mainstreaming citizen participation will help create conditions where innovative approaches can be adopted to meet the challenges of delivering basic services. Initiatives to improve coordination of the planning and implementation of strategic local interventions through the District Development Model (DDM) through the formalisation of One Plans will continue.

Standardise and professionalise appointments in municipalities

A long-term strategic approach will be taken to develop skills and a professional ethos and commitment to public service in local government. Work will also continue to improve management of the political-administrative interface at the municipal level. Interventions will also be made to allow more significant responsibilities to be devolved in areas in which capacity exists while building capacity in others. Where capacity is more limited, particularly in many rural areas, municipalities can focus on their core functions without the burdens of many extra responsibilities. A pragmatic fit between roles and capacity will, however, only partly resolve challenges in the intergovernmental system.

Reforms to the water sector

The MTDP supports the fast tracking of programmes that develop and maintain water treatment and distribution infrastructure. Strengthening the regulation of municipal water functions of authorities and providers of water services will result in greater oversight and efficiency. The MTDP 2024-2029 outlines interventions for the Department of Water and Sanitation (DWS) to work with municipalities in establishing professionally managed, ring-fenced water utilities to ensure adequate investment and maintenance.

Disaster management capabilities

Strengthening disaster management at the local government level in South Africa is essential to enhance community resilience and provide effective responses to emergencies. The MTDP 2024—2029 identifies the need to improve coordination and implementation, stabilise local government and review and overhaul the disaster management system as key priority areas for the 7th Administration.

5.4.2 Improved governance and performance of public entities

Progress has been made in strengthening the governance of the SOEs. Previous weaknesses have contributed to systemic failures that also undermined the performance of the national economy. In response to these failures, the President established the Presidential State-Owned Enterprises Council (PSEC) which made several recommendations to improve performance. Some recommendations draw on the original proposals of the NDP. They include depoliticising the appointment of members of SOE boards and establishing requirements to be merit-based and for only properly qualified candidates to be appointed. Some improvements already observed in the performance of key SOEs, notably in energy and transport, have been attributed to these governance interventions.

A key action in the MTDP 2024-2029 is the establishment of a centralised ownership model for SOEs and the finalisation of the National State Enterprises Bill that will address structural and governance challenges. Initiatives will continue in the economic infrastructure sectors to improve departmental oversight over SOEs through shareholder compacts and governance structures. The 7th Administration will continue rationalising public entities, integrating relevant entities into departments and implementing shared service models. The South African Revenue Service (SARS) will be strengthened to maximise the mobilisation of resources.

5.4.3 An ethical, capable and professional public service

The composition of the public service has been transformed to represent the entire population and mechanisms introduced for greater state accountability to its citizens through the oversight of Parliament and Chapter 9 institutions. While the foundations have been laid, functional weaknesses constrain the state's ability to pursue developmental objectives, resulting in uneven performance at all levels. In this context, an intervention is to enhance technical capacity and professionalise public administration. However, these reforms must be led from the centre of government (COG) and focus on the structured and strategic next steps to be taken over the term of the 7th Administration.

Strengthen the role of the Presidency to improve planning, policy coordination and management of the cluster system

The systemic reforms required will be driven by robust and coordinated leadership at the centre of government (COG). Institutional leadership, organisation and direction of the COG is critical for a

developmental state.⁷⁶ The role of the Presidency will be strengthened to improve inter-governmental coordination, integrated planning, policy coordination and oversight. The Presidency will also improve the coordination and management of the cluster system and its agenda-setting mandate. Strengthening capacity at the COG will guide and coordinate activities and ensure that a proliferation of operational and advisory units does not weaken their impact and contribute to the state's underperformance. This overarching intervention will support a range of other processes.

Finalise public service reform legislation and implement the professionalisation of the public sector

In many government institutions, professionalisation and skills development have been inadequate. These weaknesses were inevitable in the immediate post-1994 stages of state development. Frequent changes driven by ministerial portfolio considerations raised concerns about disruptions to institution-building and statecraft.⁷⁷ During the state capture era, many officials hesitated to make decisions, fearing accusations of improper motives. This further complicated the situation. The resulting compliance culture has weakened the state's performance.

The development of the regulatory framework for the public service will continue with the finalisation of the Public Service Amendment Bill, Public Administration and Management Amendment Bill and Public Service Commission Amendment Bill. This is in line with the Statement of Intent's commitment to building state capacity and creating a professional, merit-based, corruption-free and developmental public service. Also included in this programme are the implementation of the Professionalisation Framework and the recommendations of the Personnel Expenditure Review to manage the growth of the wage bill.

The Office of the Head of Public Administration will manage career progression and oversight of senior management. The Office will be part of the professionalisation of the public service and the improvement of coordination and implementation. The introduction of a graduate recruitment scheme will also play a significant role in attracting skills and expertise to the public service.

Strengthen the role of the Public Service Commission

The NDP highlighted the need to improve the political-administrative interference in operational decision-making. The PSC will play a key oversight role in this regard. The MTDP 2024-2029 will strengthen the role of the PSC to overseeing the appointment of the key people who direct the

⁷⁶ Government Technical Advisory Centre. 2023. 'Challenges & opportunities to strengthen the South African Centre of Government', February, https://www.gtac.gov.za/wp-content/uploads/2023/11/Think-Piece_Challenges-Opportunities-to-Strengthen-SA-Centre-of-Government_2023.pdf.

⁷⁷ DPME. 2024. '30-year Review'.

affairs of our state such as Directors-General, Deputy Directors-General, Chief Executive Officers of SOEs and board members and other senior positions. The PSC Amendment Bill will play a key role in enabling this. Consistent and purposeful implementation of these legislative changes will help stabilise the political-administrative interface and support the process of professionalisation.

Strengthen the public procurement system

Administrative attempts to minimise corrupt practices in the public procurement system have added to red tape in the public sector but reduced efficiencies. The Public Procurement Act will provide a systemic base for strengthening and regularising public procurement processes. A key component of this effort is the mandating transparency in all procurement processes in government departments and SOEs. This will include the publication of all bids, all submissions received with their pricing and the winning bidder. Appeals procedures must also be made clear and, if necessary, included in relevant legislation.

Several initiatives will further enhance the capabilities of the state, including: conducting institutional reviews and skills audits to ensure that state institutions are focused on execution in line with their mandates and public value; implementing the recommendations from the personnel expenditure review to manage the growth of the wage bill; and improving the efficiency and productivity of the public sector by reducing red tape across departments and entities.

Implementation of the National Spatial Development Framework

The NSDF is embedded within the overall planning system and ensures that the sector investments are directed towards spatial priorities in an integrated way. The NSDF and its subframes provide the ideal long-term spatial pattern for the country and offer investment guidance to various sectors. The National Spatial Action Areas identified in the NSDF highlight areas that requires specific urgent intervention to mitigate anticipated adverse outcomes.

5.4.4 Digital transformation across the state

The digital transformation of the South African state and government is a multifaceted initiative aimed at enhancing public service delivery, improving efficiency and fostering economic growth. Spearheaded by the various key national departments, this transformation involves several strategic initiatives designed to integrate digital technologies across sectors.

The MTDP 2024–2029 proposes the digital transformation of public services, especially citizen-facing services. This will be supported through the second wave of reforms by Operation Vulindlela. Government will invest in digital public infrastructure to give South Africans access to government services. At the heart of this transformation will be the implementation of a digital identity system.

5.4.5 Mainstreaming of gender, empowerment of youth and persons with disabilities

The NDP emphasises the realisation of the rights of women, youth, and persons with disabilities, defining them as cross-cutting issues that must be advanced across every other priority area. It provides a vision of where South Africa should be in terms of realising these outcomes.

With respect to the rights of women, the NDP aims for gender equality across all sectors, ensuring equal rights, opportunities, and representation for women; full economic empowerment of women, with equal access to jobs, fair wages, and leadership roles; a significant reduction in gender-based violence (GBV), creating a society in which women and girls can live without fear; full gender parity in governance and decision-making at all levels; and the mainstreaming of gender rights considerations across all areas of national policy. It also emphasises the need for a responsive legal system and security services that effectively protect and advance women's rights.

The NDP identifies a range of desired outcomes regarding youth, including a significant reduction in youth unemployment, and ensuring that youth can participate meaningfully in the economy; universal access to education and vocational training to equip young people with relevant skills; increased support for youth-led entrepreneurship; and a high level of participation by youth in political and societal decision-making processes.

It also outlines several outcomes with respect to realising the rights of persons with disabilities, advocating for a society with an equitable education system responsive to the needs of learners with disabilities, employment strategies to increase the employment of persons with disabilities, healthcare services that are accessible and tailored to the needs of persons with disabilities, and responsive legal frameworks protecting against discrimination and promoting equal rights and dignity for all.

Despite some progress in realising these rights (particularly through social grants), gender inequalities persist in various aspects of life, with Black African women facing intersectional marginalisation based on both race and gender; youth empowerment, including unemployment is a major challenge, with

around half of South Africa's population aged 15-34 unemployed. The lack of progress on disability inclusion and rights has been particularly pronounced.

The MTDP 2024-2029 identifies a combination of causal pathways that will be followed in all three Strategic Priorities to systematically remove barriers and expand opportunities for these groups. Economic empowerment through targeted skills development, employment, and entrepreneurship programmes are all key to increasing access to economic opportunities. Access to economic resources in turn helps other rights to be realised. The strategies included here include: economic empowerment, education and skills development, healthcare and social protection, reforms in the criminal justice system, and promoting equality with respect to political representation and decision making.

5.4.6 A reformed, integrated and modernised Criminal Justice System

The NDP notes that high crime levels slowed South Africa's social and economic development. State capture undermined efforts to create a capable, ethical and developmental state, increasingly obstructing economic activity and social development. Although recent crime statistics show a downward trend, particularly in murder rates, the figures remain unacceptably high. Violence against women, such as domestic violence and rape, has not decreased significantly, and crimes such as the trafficking of children for prostitution and drugs continue to be unrecorded phenomena. For South Africans to feel safe, all categories of crime must be reduced. One of the top focus areas of the MTDP 2024–2029 is to strengthen law enforcement agencies to address crime, corruption and GBV.

The MTDP 2024–2029 will continue the process of strengthening the coherence of the criminal justice system (CJS). This will require strengthening key institutions, such as the National Prosecuting Authority (NPA), to improve prosecutions and combat corruption. This will also require regulating the recruitment and appointment of top officials in criminal justice departments, with a focus on skills, expertise and integrity. This should be a transparent and merit-based process.

5.4.7 Effective border security

Effective and efficient border management will be a critical part of ensuring that transnational crime is limited while promoting regional trade and legal movement of people. The government will ensure that South Africa's borders are effectively managed, defended and protected to ensure economic sovereignty and limit transnational crime while adhering to South Africa's international obligations. Proper border management will also assist in promoting regional trade and the legal movement of

individuals. The Border Management Authority (BMA) will be capacitated to fulfil its functions and achieve its desired outcomes. Furthermore, appropriate reforms will be introduced to ensure better migration management into South Africa.

5.4.8 Secured Cyber Space

Cyber security is of growing concern for the South African state and the population as a whole. In 2024, South African government agencies and other organisations were subjected to, on average, 1 450 cyber-attacks per week, with targets including the National Health Laboratory Service, the Companies and Intellectual Property Commission and the Government Employees Pension Fund.⁷⁸ A recent attack on the national weather service showed that such attacks in South Africa can affect the entire SADC region. In 2013, the State Security Agency (SSA) was also attacked. As part of its effort to deal with what is set to become a more serious problem, the government developed a National Cyber Security Framework, and set up a Cyber Command. However, the Framework is over a decade old and outdated, and more needs to be done to protect the state and citizenry. Much more education is required at a public level, and the relevant government agencies must be tasked with building protective measures against other state agencies and malicious non-state actors.

5.4.9 Increased feelings of safety of women and children in communities

Enhancing the capacity of the police service

The MTDP 2024–2029 proposes a more evidence-based policing approach that better leverages intelligence and technology. This will include the modernisation of the 10111 police emergency help line. Technologies ranging from closed-circuit television (CCTV) cameras to drones and artificial intelligence (AI) tools will be used for threat detection and as force multipliers. The South African Police Service (SAPS) will implement a more data-driven approach to target violent crime hotspots and direct resources accordingly. SAPS will continue to work with communities through community policing forums to promote the role of citizens in reducing crime.

Combat gender-based violence and femicide

A specific focus of the MTDP 2024-2029 will be to combat GBVF through continued implementation of the National Strategic Plan on Gender-based Violence and Sexual Offences. The 7th Administration will

⁷⁸ Africa Defense Forum. 2025. 'South Africa Faces Increased Cyberattacks Against Government Agencies', 11 February, <https://adf-magazine.com/2025/02/south-africa-faces-increased-cyberattacks-against-government-agencies>.

move rapidly to ensure that the National Council on Gender-Based Violence and Femicide is fully functional and properly resourced. The MTDP 2024-2029 will also strengthen mechanisms to support victims of GBVF and establish additional courts to deal with sexual offences.

5.4.10 Combat priority offences (economic, organised crime and corruption)

Dealing with organised and violent crime

Combatting priority crimes is a focus of the MTDP 2024-2029. The challenge of organised crime extends beyond its direct activities. It undermines the integrity of the CJS and public trust through corruption and intimidation. Organised crime includes a variety of economic crimes, including theft and vandalism of infrastructure, extortion in the construction sector (through the ‘construction mafia’), illegal mining, gang violence, cash-in-transit heists and cybercrime. Dealing with these issues will enhance confidence and adherence to the rule of law.⁷⁹ Specialised police units will be established to deal with these types of priority crimes.

Improved prosecutions against crime and corruption

Improving prosecutions against all forms of crime, including corruption, and ensuring that these prosecutions lead to convictions is crucial. The government will deal firmly with corruption by implementing the National Anti-Corruption Strategy and implementing the recommendations of the State Capture Commission. The MTDP 2024-2029 also highlights the need to strengthen whistleblower protection through legislative reforms. To minimise the likelihood of future corruption, government will strengthen accountability and consequence management. This will include lifestyle audits for elected officials, senior public officials and other critical posts (such as officials working in supply chain management). Key Justice Crime Prevention and Security Cluster (JCPS) institutions will also be bolstered to improve outcomes against crime and corruption. These include the NPA and the Directorate for Priority Crime Investigation (DPCI) or Hawks.

Strengthen anti-money laundering efforts

A further priority for the 7th Administration will be to strengthen anti-money laundering and terror financing efforts and other tasks related to securing South Africa’s removal from the Financial Action Task Force (FATF) list of jurisdictions under increased monitoring.

⁷⁹ NPC. 2022. ‘10-year Review’, 27.

5.4.11 Advance South African foreign policy for a better world

Promoting peace, security and development through foreign policy

The key pillars of our foreign policy remain the promotion of human rights, peace and friendship and the strengthening of fair trade and investment ties with other countries. South Africa's foreign policy is also an articulation of the South African national interest.⁸⁰ The country's national interest must be constantly defined and negotiated at the intersections of the domestic policy objectives articulated in the NDP and the challenges that arise in an increasingly complex global milieu.

South Africa's one-year Presidency of the G20 in 2025 offers an opportunity to influence the global development agenda. South Africa's theme will be to promote solidarity, equality and sustainable development. In consultation with key partners in BRICS+ and Africa, the focus will be on reducing global inequality and poverty and advancing more balanced sustainable development.

Build state capacity through established global public and private partnerships focused on knowledge and people-to-people exchanges

The world faces several common challenges and indications are that these could increase over the MTDP 2024-2029 period. They include climate change, the increasing frequency of public health crises, including pandemics, and increasing food insecurity, among others. These phenomena affect South Africa too and are an impediment to the country's efforts to tackle its developmental challenges effectively. The COVID-19 pandemic starkly demonstrated this.

The MTDP 2024-2029 seeks to leverage opportunities that increase global public and private partnerships to help effectively address these and local challenges. Such partners range from individual experts to institutions in various parts of the world, covering a wide array of fields: pharmaceuticals, meteorology, medicine, agriculture and the economy, among others. Government will promote person-to-person and institution-to-institution exchanges and joint projects to build local capacities and cooperative approaches with its partners in priority areas of work.

5.4.12 Enhanced peace and security in Africa

Promote peace, security, democracy and socio-economic development in Africa

South Africa will continue to play a leading role in the region, working with structures of SADC and the Southern African Customs Union (SACU) to strengthen regional cooperation by reviewing tariff and non-tariff restrictions, customs procedures and visa regimes. Government will also continue to work to strengthen the AU to support the achievement of peace, development and economic integration on the continent. Peacebuilding and peacekeeping, especially in Africa, has been an enduring theme in South Africa's foreign policy, involving the Department of International Relations and Cooperation (DIRCO), the South African National Defence Force (SANDF) and the SSA. While there have been mishaps in certain cases, the peace focus has also earned dividends. This focus will continue to address past challenges and failures and build on successes.

5.5 Key enablers and interlinkages

The successful achievement of the desired outcomes from the above strategic interventions will depend on the following key enablers and interlinkages:

- **Strong leadership and governance:** The COG will engage in effective coordination and establish control mechanisms to guide the system to achieve its goals. High-level responsibility is essential to ensure that the necessary enablers and connections are in place to support priority actions and interventions. Adherence to the rule of law is critical as it ensures that the government operates within legal boundaries and respects citizens' rights.
- **Institutional capacity:** A well-equipped public service is vital for effective performance, requiring personnel with the necessary skills and knowledge. Adequate funding and infrastructure must be provided to support government operations, alongside streamlined processes and procedures that facilitate efficiency.
- **Public participation and trust:** Encouraging citizen engagement fosters a sense of ownership and accountability, leading to increased support for government initiatives. Building trust hinges on the belief that the government acts in the best interests of its citizens. This can be achieved through transparent and honest communication.
- **Prioritisation of interventions:** Interventions to ensure a modern, technology-driven and capable state and an ethical, accountable and transparent public service will be prioritised. Programmes that have not performed should be reviewed to assess their relevance and impact.

These enablers and interlinkages are interdependent and mutually reinforcing. A capable, ethical and developmental state relies on a robust foundation in all these areas.

5.6 Key risks and mitigations

The strategic priority of establishing a capable, ethical and developmental state is fundamental for effective governance and the delivery of public services. Several emerging risks and threats could challenge the implementation of the proposed interventions. Mitigation measures for these risks must be considered.

Wider geopolitical developments may pose challenges for South Africa in maintaining its relationships with competing powers, while simultaneously advancing the overarching goals of Africa 2063. South Africa has been largely successful in maintaining this balance. However, the approach of the United States of America (USA) is a matter of concern, in terms of the unpredictability of its diplomatic and trade relationships globally and with respect to South Africa.

The key risk in strengthening local government is that local political forces, whose interests the proposed measures threaten, could obstruct MTDP 2024-2029 interventions. To mitigate this risk, a multi-pronged approach, led nationally by the Presidency and the Department of Cooperative Governance (DCOG) and supported by parties of the GNU, will be required to explain and promote the new approaches for local government reform. This process should engage with and mobilise the support of the South African Local Government Association (SALGA), as the political representative of local government, as well as of community-based organisations whose members are most affected by local government delivery failures.

To address these risks, it is essential to develop and implement measured and strategic responses. Strengthening economic diplomacy capabilities with all partners both those in BRICS+ and those in the West will be beneficial, especially if South Africa starts leveraging its emerging resources and industries, such as critical minerals and the green economy. South Africa's norm entrepreneurship is exemplified by its International Court of Justice (ICJ) genocide case against Israel, which has garnered admiration and support from many nations in the Global South and from public opinion around the world.

On the professionalisation of the public sector, a significant risk is insufficient emphasis on skills development and professionalisation in government institutions, where qualifications are often prioritised over operational experience and performance. This risk can be mitigated by implementing the Professionalisation Framework and the recommendations from the personnel expenditure review to manage the growth of the wage bill effectively. Another risk is the lack of adequate training and development opportunities for public service employees. Repositioning the National School of

Government (NSG) as a leading public sector academy and expanding the Nyukela programme for middle management service (MMS) can address this risk. Additionally, frequent changes driven by ministerial portfolio considerations pose a risk to institutional stability and effective governance. This risk can be mitigated by finalising the Public Service Amendment Bill, the Public Administration and Management Amendment Bill and the Public Service Commission Amendment Bill which aim to establish a comprehensive regulatory framework for the public service.

In terms of crime and corruption, a significant risk lies in the coherence of the CJS reforms. The implementation of these reforms across all departments may not be effective or consistent. To mitigate this risk, it is essential to develop a comprehensive implementation plan that outlines specific timelines and assigns responsibilities. Establishing a central coordinating body to monitor progress and address challenges is crucial, as is ensuring ongoing communication and collaboration among CJS departments. Another risk pertains to the improvement of prosecution efforts, particularly the potential for political interference that could undermine the independence of the NPA. To address this risk, strong legislative safeguards must be implemented to protect the NPA's independence. Establishing clear criteria and a transparent process for appointing senior NPA officials is essential.

Strengthening whistle-blower protection will encourage the reporting of corruption and misconduct. Violent crime poses a risk that local interventions may not effectively target specific drivers of criminal activity. To mitigate this risk, a strategy for comprehensive data analysis is required to identify the root causes of violence in various areas. Involving local communities in the development and implementation of violence reduction strategies is essential. Additionally, enhancing police capacity through adequate resources and training will support the effective execution of localised interventions.

5.7 Partnerships and contributions of the non-state sector

The success of the developmental state is inherently dependent on its ability to engage effectively with other role players in society, including the private sector and civil society, as well as other organised formations. To achieve this, the appropriate engagement architecture must be developed at all levels and regularly reviewed in a collaborative manner to ensure its effective functioning. Institutions such as the National Economic Development and Labour Council (NEDLAC) and the arrangements of Operation Vulindlela are examples of the approach that may be considered. Their practical experience should be evaluated and used to guide the development of a broader set of partnerships between different spheres of the state and other organs of society at all levels.

5.8 Summary

This chapter emphasises the importance of a professional public service combined with strong leadership and strategic reforms to advance South Africa's developmental agenda. By tackling systemic weaknesses and improving coordination between departments, the government can create an environment that promotes effective governance, enhances public trust, and supports sustainable socio-economic development. Ongoing reforms will strengthen the capacity of the state, ensuring that South Africa remains responsive to the needs of its citizens while navigating complex global challenges.

NOT FOR DISTRIBUTION

CHAPTER 6

IMPLEMENTATION, MONITORING AND EVALUATION

CHAPTER 6 IMPLEMENTATION, MONITORING AND EVALUATION

6.1 Introduction

The successful implementation of the MTDP 2024-2029 will be demonstrated through the achievement of its established targets and the positive impact on citizens' well-being. The accompanying results frameworks of the MTDP 2024-2029 detail the interventions, indicators, mid-term and end-term targets, as well as the institutions responsible for executing and supporting these initiatives. These targets are crucial for monitoring the performance of the MTDP 2024-2029 during the 7th Administration. Achieving these objectives will contribute positively to the country's development goals. Meeting the citizens' expectations for service delivery will help build trust and confidence in government institutions. This chapter outlines a set of interconnected critical requirements for successful implementation, which include: ensuring policy coherence and prioritisation; aligning planning and budgeting systems; mobilising resources; establishing institutional arrangements for effective delivery; monitoring and evaluating performance; and maintaining timely, transparent, and effective public communication.

6.2 Building on lessons from practice

In developing the MTDP 2024-2029, government considered important lessons from the previous cycles of 5-year plans and the various coordination and delivery intervention approaches. These include the Outcomes Approach, Operation Phakisa, the District Development Model (DDM) and the current Operation Vulindlela. The process also considered insights from various reviews of the country's progress, as outlined in Chapter 2. Furthermore, it drew inspiration from successes in its recent history when the country was responding to crises such as the COVID-19 pandemic, the 2022 floods and the energy crisis.

To realise the NDP goals, the identified weaknesses must be addressed, requiring improvement in several key areas. The approach to development planning and budgeting across all departments and spheres of government must be enhanced. There must be a balance between a coordinated high-level focus on priority strategies and interventions on the ground. Sectors and spheres of government will focus on the detailed implementation of their core programmes. Coordination will be strengthened in areas of joint responsibility.

The government's response to the COVID-19 pandemic demonstrated the state's capability for effective governance, planning and coordination. It also illustrated that through collaboration with social partners, government can achieve more. Facing the crisis, the National Coronavirus Command Council (NCCC) exhibited the necessary agility, rapid decision-making and data-driven decisions. The all-of-society approach effectively addressed the crisis points, enabled information flow, bridged contradictions, and supported transparent public engagements. The revision of the MTSF, and reprioritisation of budgets towards urgent needs of health and social relief, such as the Temporary Employment Relief Scheme (TERS) and the Social Relief of Distress (SRD) grant, further demonstrated the adaptability and responsiveness in the face of changing needs. This experience underscores the importance of the role of the centre of government (COG) in driving integrated, all-of-society responses through collaboration between government and other actors, including business, civil society and international partners.

Coordination during the 2022 flood disaster and Energy Action Plan (EAP) leveraged lessons from COVID-19. A challenge, however, remains to institutionalise the improved practices and embed lessons learnt into standard operating procedures and governance frameworks. The approach to MTDP 2024-2029 implementation must embrace these lessons in dealing with current challenges such as youth unemployment, crime prevention and infrastructure gaps.

6.3 Policy coherence and priority setting

To ensure effective governance and development outcomes, the MTDP 2024-2029 focuses on a limited set of medium-term priorities and measurable targets aligned with the Statement of Intent and the NDP. The approach links long-term goals to short-term operational activities. The cluster system was used as a focal point for coordinating government-wide planning processes, identifying priority interventions as well as the priority outcomes to be achieved, both at mid-term and end-term. Furthermore, the cluster system must be used to resolve the trade-offs that need to be made between fiscal funding of economic interventions, social interventions and those that need to be made within Strategic Priorities. Institutional Strategic Plans (SPs) and Annual Performance Plans (APPs) must reflect MTDP 2024-2029 priorities.

As part of the agenda-setting, clusters will adopt annual 'programmes of action' that foster an integrated service delivery approach. Agenda-setting is crucial to ensure an integrated approach across the clusters. Inter-cluster and intergovernmental relations (IGR) mechanisms will support this by giving priority attention to cross-cutting matters/blockages needing this type of intervention. The DDM will

continue to be used to enhance coherence across all spheres of government. Effective agenda-setting and IGR will be crucial.

A White Paper on development planning and implementation will be finalised to establish an overarching framework for national development planning, building on existing statutory planning instruments across various sectors and levels of government.

Coherence to implementation programmes is crucial. Implementation must therefore build on the lessons from experience by mainstreaming proven delivery and intervention approaches. The reform-driven approach will be continued. The ongoing Operation Phakisa interventions, introduced in 2014, have been integrated into the MTDP 2024-2029 so that they continue to their logical endpoints under existing frameworks. Existing Operation Phakisa oversight structures will be reconfigured, and in due course, phased out to eliminate duplication.

Operation Vulindlela, introduced in 2019, to accelerate structural reforms, is now fully integrated into the MTDP 2024-2029. The next wave of Operation Vulindlela reforms will be introduced in this term. To maintain its momentum and success, it will focus on a few transversal priority reforms and maintain its agile delivery intervention approach, collaboration with non-government actors and the robust tracking systems. Interventions of this nature will be temporary for a maximum of two years. Sector-level red-tape eradication should be identified as second-order initiatives outside Operation Vulindlela but tied to Directors'-General (DGs) and Ministers' and Deputy Ministers' performance agreements.

6.4 Alignment of planning and budgeting systems

Successful implementation of the MTDP 2024-2029 hinges on strong alignment between development priorities, institutional plans and budgets. In the public sector, planning sets the agenda, while budgeting provides the financial resources to execute. When these functions lack coordination, the impact of government programmes is limited. As a result, a continuous process of identifying and implementing innovative, results-driven approaches is necessary. Additionally, to achieve the alignment, practical steps must be taken to integrate the MTDP 2024-2029 into the budgeting system. Budgeting reform is currently underway to improve alignment.

This requires DPME and National Treasury to coordinate their functions. The DPME ensures that national development priorities are cascaded from the NDP to the MTDP 2024-2029; and that the MTDP's priorities are directly embedded in institutional and departmental plans across all spheres of

government. The DPME also assists clusters and departments in resolving policy gaps and inconsistencies that may exist in plans.

The National Treasury will integrate the priorities of the MTDP 2024-2029 into the budgeting system and ensure that the fiscal framework reflects MTDP 2024-2029 priorities in the Medium-Term Expenditure Framework (MTEF). The National Treasury will also set out a policy framework for resource mobilisation, to enable government to explore alternative or innovative funding mechanisms, including public-private partnerships (PPPs), to supplement constrained fiscal resources. In this context, the National Treasury will still ensure that a sustainable fiscal path is maintained over the medium term. Simultaneously, interdepartmental collaboration and partnerships with external stakeholders will be fostered to optimise resource pooling.⁸¹

6.5 Resource mobilisation

Addressing South Africa's strategic priorities requires substantial resource mobilisation beyond the fiscal envelope. While socially a oriented programmes may require full financing through the fiscus, the government must seek innovative financing models for certain economy-oriented programmes. In addition, there must be effective use of available resources by addressing inefficiencies and eliminating waste.

Immediate actions include utilising PPPs to leverage private capital and expertise. It's essential to activate development finance institutions (DFIs) to secure specialised funding for catalytic industrialisation projects and to promote renewable energy, green technologies and climate mitigation efforts that support a just energy transition program. Additionally, government will implement public guarantees and innovative funding mechanisms to ensure the viability of projects and strengthen cross-sector partnerships to mobilise resources and expertise.

Funding infrastructure development is vital for job creation and economic revitalisation. In the context of urbanisation, private investment in urban infrastructure, affordable housing and smart city projects should be encouraged, with DFIs providing long-term financing and ensuring equitable benefits for disadvantaged communities. For rural development and agriculture, a blend of grants and loans can modernise agriculture, enhance food systems, boost rural productivity and ensure food security, with DFIs supporting smallholding farmers and rural enterprises.

⁸¹ National Treasury. 2024. 'Macroeconomic Policy: A Review of Trends and Choices', <https://www.treasury.gov.za/documents/National%20Budget/2024/Macroeconomic%20Policy%20Review.pdf>.

Education, health and public safety are key areas under Strategic Priority 2 that require significant funding. Some trade-offs must be made. Funding imbalances in Post-school Education and Training (PSET) will be addressed by reallocating resources to Technical and Vocational Education and Training (TVET) and community colleges. Strengthening partnerships with economic sectors that benefit from skilled graduates will expand funding contributions.

On healthcare, there is a need to mobilise private finance to complement the National Health Insurance (NHI) programme. The relevant Ministerial Advisory Committee will play a key role in this regard. PPPs will support infrastructure development, medical equipment acquisition and public health initiatives to improve access and equity in healthcare delivery. On public safety, an approach must encourage collaboration between public and private entities to optimise resources for policing, crime prevention, and community safety. Innovative funding instruments will be used to finance security infrastructure, technology-driven solutions, and community-based crime prevention.

6.6 Institutional arrangements for effective delivery

The MTDP 2024–2029 is a plan for the whole of society and provides guidance to government institutions about the strategic contributions that are expected from them. The role of DPME in the MTDP 2024-2029 implementation is to monitor implementation at a strategic level to ensure that any impediments are identified and addressed at an early stage.

Whole-of-society approach

The NDP envisions a whole-of-society approach to development. However, translating this vision into meaningful societal engagement in the planning process remains a challenge. This requires clear mechanisms for societal involvement at all stages of the planning cycle, from setting the agenda to monitoring and evaluation (M&E). The National Planning Commission (NPC) and Parliament have a crucial role to play in facilitating this engagement. The NPC is a bridge between government and society, convening stakeholders around key development issues and ensuring that diverse voices are heard in the planning process. Parliament can also help to promote greater dialogue and accountability around the MTDP 2024-2029.

To strengthen the implementation of this plan, existing forums such as the National Economic Development and labour Council (NEDLAC) will be leveraged to encourage social compacting around MTDP 2024-2029 priorities and help bring together government, business, labour and civil society to

drive implementation. The key is to create spaces for cocreation and joint problem solving among the different social partners, rather than merely seeking endorsement of pre-determined policies.

Strengthening institutional arrangements and organisational capacity is essential for the successful implementation of the MTDP 2024–2029. That will require a combination of institutional strengthening and cultural change.

The DPME will drive alignment and accountability across the planning system by working with established coordination structures, such as the DDM and sector-specific forums, to promote integrated implementation and problem solving.

Focusing the MTDP 2024-2029 on a core set of catalytic interventions will help drive more effective execution. Deepening societal engagement in the planning process will foster joint ownership and sustainability of development efforts. Incorporating foresight and anticipatory governance will enable the MTDP 2024-2029 to navigate an uncertain future and build resilience in the face of shocks and disruptions. The success of the MTDP 2024–2029 will depend on the collective efforts of government, labour, business, civil society and all South Africa's citizens working together.

Strengthening institutional capacity and coordination

For the DPME to play its central role in steering the national planning process and ensuring alignment across government and monitoring progress, its mandate must be understood and supported. To this end, efforts will be made to strengthen the links between the DPME, Parliament, provincial legislatures and municipal councils. Regular briefings, public hearings and oversight visits will keep planning issues at the forefront of the legislative agenda and promote a culture of accountability.

Establishing and strengthening coordination structures across government spheres and sectors is essential to break down silos and address complex cross-cutting issues. At the local government level, the DDM provides the platform for spatially oriented coordination, bringing together national, provincial and local government role players to jointly plan and implement development initiatives. At the national level, the cluster system plays an important role in promoting inter-departmental coordination and the success of Operation Vulindlela has demonstrated the potential for focused, high-level coordination to unlock progress.

One of the first steps in the implementation of the MTDP 2024-2029 will entail its spatialisation . This will focus on the linkage of the priority actions expressed across the three strategic priorities to the priority action areas and sub-frames of the National Spatial Development Framework (NSDF) to ensure

that the MTDP advances spatial transformation objectives through its implementation. In addition, catalytic projects in particular districts will also be elevated for monitoring alongside the MTDP, and specific interventions and targets are also included to ensure that Capital Investment Projects are prioritised within National Spatial Action Areas. Linkages between the spatial planning system and institutional planning and budgeting systems will also be strengthened. Work will continue to strengthen capabilities across the system for the use of geospatial information and dynamics to inform priorities and improve capabilities for geospatial referencing of projects across the system.

In collaboration with other government departments and training institutions such as the National School of Government (NSG), the DPME will develop targeted programmes to enhance the planning capabilities of officials across the state. Building a core group of skilled planners and embedding planning best practices into government processes will better equip the state to develop and implement effective plans.

6.7 Monitoring, reporting and evaluation of the MTDP

Systems for performance monitoring and reporting will be implemented to ensure oversight and accountability. The President will sign performance agreements with Ministers and Deputy Ministers to hold his Cabinet accountable for the implementation of the MTDP. DPME, supported by clusters, will coordinate quarterly reporting through an integrated monitoring platform, which will feed into the bi-annual monitoring reports to provide comprehensive analyses of government performance. This will be used to foster a learning culture to identify obstacles and enable informed, timely adjustments.

Departments are required to maintain high-quality programme performance information and implement ongoing improvements to administrative records to make monitoring and reporting seamless. The different clusters will lead on coordination of priorities and in fostering accountability. FOSAD will play a significant role in this regard to foster a whole-of-government approach. The DPME will work with the Presidency to manage a system of escalating areas of systemic underperformance to Cabinet. The annual development indicators will track progress against NDP targets. Mid-term and end-term evaluations will be used to assess progress and impact. A robust system of evaluation reports, expenditure reviews, and improvement plans will ensure continuous learning, refinements and prioritisation to ensure fiscal sustainability and strategic focus.

6.8 Summary

The approach outlined in the MTDP 2024-2029 marks a significant departure from previous MTSF strategies. It focuses on a limited set of strategic priorities and outcomes instead of trying to address a broad range of departmental activities. This plan aims to guide the achievement of key elements within the minimum programme of priorities specified in the Statement of Intent and the NDP. Successful implementation of the MTDP 2024-2029 will require active cooperation between the public and private sectors to achieve the desired goals. A whole-of-society approach is essential, engaging citizens, civil society, businesses, and labour organizations. This involvement fosters a sense of ownership and helps ensure the sustainability of the plan. The true measure of the MTDP's success will be its ability to meet targets and demonstrably improve the lives of South African citizens, thereby fostering public trust and confidence in government institutions.

RESULTS FRAMEWORKS

ANNEXURE A – Results Framework for Strategic Priority 1: Drive Inclusive Growth and Job Creation

Desired impact: Lift economic growth to above 3.0% and reduce unemployment to below 28.0% by the end-term.

Outcome s	Outcom e Indicato rs	Outcom e Baselin es	Outcom e Targets 2029/30	Strategic Interventio ns	Interventi on Indicators	Intervention Baseline	Mid-Term Targets	End-Term Targets	Lead Departme nt(s)	Supporting Institutions
Increase d employ ment and work opportu nities	Number of jobs created or sustaine d	New indicator	3.8 million jobs	Support unemployed people to secure work opportunitie s and productive livelihoods	Number of people supported through job search and placement services	Public Employment Services: 280 000 National Pathway Managemen t Network: 650 000 UIF: 67 000 Compensati on Fund: 4 000	1 million people supported by the Department of Employment and Labour and the National Pathway Managemen t Network	2 million people supported by the Department of Employment and Labour and the National Pathway Managemen t Network	Departmen t of Employme nt and Labour	All entities reporting to Department of Employment and Labour
					National Pathway Managemen t Network institutional ised through the establishm ent of the SA Youth Trust to increase earning opportuniti es for young people	New indicator	SA Youth Trust registered and operational	-	Departmen t of Employme nt and Labour	The Presidency
					Number of jobs created and sustained through the small enterprise developme nt ecosystem	91 270 jobs created and sustained in small and medium enterprises	136 750 jobs created and 803 250 jobs sustained in small and medium enterprises	273 500 jobs created and 1 606 500 jobs sustained in small and medium enterprises	Departmen t of Small Business Developme nt	Small Enterprise Developmen t and Finance Agency (Sedfa)
					Number of learners or students placed in workplace- based learning (internship s, learnership s, work integrated learning)	87 915 learners and students placed	285 000 learners and students placed	500 000 learners and students placed	Departmen t of Higher Education and Training	Department of Higher Education and Training entities
	Number of public employ ment opportu nities created by governm ent	1 855 693 work opportu nities created	6 481 8 01 work opportu nities created	Reform public employment programme s to enhance their impact	Public employe ment programm e programm es aligned and integrated through Work SA	Review of public employment programmes completed	New integrated approach to public employment programmes implemented	-	National Treasury / Presidency	Department of Employment and Labour

Outcome s	Outcom e Indicato rs	Outcom e Baselin es	Outcom e Targets 2029/30	Strategic Interventio ns	Interventi on Indicators	Intervention Baseline	Mid-Term Targets	End-Term Targets	Lead Departme nt(s)	Supporting Institutions
				Create high-quality work opportunities through public employment programmes	Number of work opportunities created through the Basic Education Employment Initiative	245 489 work opportunities created	250 000 work opportunities created	300 000 work opportunities created	Department of Basic Education	The Presidency
					Number of work opportunities created through the Social Employment Fund	50 000 work opportunities created	100 000 work opportunities created	250 000 work opportunities created	Department of Trade, Industry and Competition	The Presidency Department of Small Business Development
					Number of self-employment opportunities created through support to subsistence farmers	141 801 self-employment opportunities created	291 801 self-employment opportunities created	441 801 self-employment opportunities created	Department of Agriculture	The Presidency Department of Employment and Labour
					Number of work opportunities created through the Community Works Programme	250 404 work opportunities created	250 000 work opportunities created	300 000 work opportunities created	Department of Cooperative Governance	Department of Employment and Labour
					Number of work opportunities created through the creative sector stimulus	39 571 work opportunities created	20 000 work opportunities created	40 000 work opportunities created	Department of Sports, Arts and Culture	The Presidency Department of Sports, Arts and Culture
					Number of jobs created through the digital economy programme (GBS)	52 390 jobs created in the GBS sector	50 000 jobs created in the GBS sector	150 000 jobs created in the GBS sector	Department of Trade, Industry and Competition / Department of Communications and Digital Technologies	National Treasury / The Presidency / Department of Small Business Development
					Number of work opportunities created through the National Youth Service	89 000 work and paid service opportunities created	125 000 work and paid service opportunities created	250 000 work and paid service opportunities created	National Youth Development Agency	The Presidency / Department of Public Works and Infrastructure / Provinces / Sector Education Training Authorities
					Number of work opportunities created through the Expanded Public Works Programme	987 038 work opportunities created	3 062 966 work opportunities created	5 000 000 work opportunities created	Department of Public Works and Infrastructure	All partners in the Expanded Public Works Programme / Provincial departments and Municipalities

Outcomes	Outcome Indicators	Outcome Baselines	Outcome Targets 2029/30	Strategic Interventions	Intervention Indicators	Intervention Baseline	Mid-Term Targets	End-Term Targets	Lead Department(s)	Supporting Institutions
Accelerated growth of strategic industrial and labour-intensive sectors	Value of investment attracted	R700 billion in investment	R3 trillion in investment	Secure additional investment through sectoral interventions, competition interventions and industrial financial support	Investment secured through sector master plans	New indicator	R13 billion investment secured through sector master plans	R30 billion investment secured through sector master plans	Department of Trade, Industry and Competition	All cluster departments
					Investment secured through competition and transformation interventions	R8 billion	R20 billion investment leveraged from competition and transformation interventions	R40 billion investment leveraged from competition and transformation interventions	Department of Trade, Industry and Competition	National Treasury / Department of Small Business Development
					Investment secured through industrial financial support	R160 billion investment secured through industrial funding support	R70 billion investment secured through industrial funding support	R125 billion investment secured through industrial funding support	Department of Trade, Industry and Competition	National Treasury / Department of Small Business Development
				Strengthen industrial policy and incentives framework to ensure that these are results-based and efficiently targeted	Review of industrial policy completed	New indicator	Review of industrial policy completed and recommendations implemented	-	Department of Trade, Industry and Competition	
					Recommendations of the incentives evaluation completed	New indicator	Recommendations of the 2018 incentives evaluation fully implemented	New incentives framework implemented	Department of Trade, Industry and Competition	Presidency / Department of Planning, Monitoring and Evaluation
					National Policy Framework on Incentives for Small Enterprises developed and implemented	New indicator	National Policy Framework on Incentives for Small Enterprises developed	National Policy Framework on Incentives for Small Enterprises implemented	Department of Small Business Development	Department of Tourism Department of Trade, Industry and Competition Department of Agriculture Provinces
				Drive growth in labour-intensive sectors	Increased export of Global Business Services	R7.3 billion in exports of Global Business Services	Value of Global Business Services exports increased to R12 billion	Value of Global Business Services exports increased to R20 billion	Department of Trade, Industry and Competition	National Treasury Department of Small Business Development
					Increase in SA's share of global mining exploration expenditure	Less than 1% of global exploration expenditure	2.5% of global exploration expenditure	5% of global exploration expenditure	Department of Mineral and Petroleum Resources	National Treasury Department of Trade, Industry and Competition
					% of global market for processed critical minerals captured	Regional Critical Minerals (RCM) Strategy Framework developed to increase value addition and support transition to low carbon economy	2% of global market for processed critical minerals captured	5% of global market for processed critical minerals captured	Department of Trade, Industry and Competition	National Treasury Department of Mineral and Petroleum Resources Department of Small Business Development

	Compliance with all international commitments and requests for external missions (including political and diplomatic initiatives) in pursuit of regional, continental and international stability	60% compliance	70% compliance in regional and global integration	Compliance with international commitments (where commitments refer to military, humanitarian, environmental and any other)	% compliance in regional and global integration	60% (9 police liaison officers were placed in 7 from the total of 15 SADC Countries, including Angola, Kingdom of Eswatini, the Kingdom of Lesotho, Malawi, Mozambique (2), the United Republic of Tanzania and Zimbabwe (2))	70% compliance with all international commitments and requests for external missions (including political and diplomatic initiatives) in pursuit of regional, continental and international stability	70% compliance with all international commitments and requests for external missions (including political and diplomatic initiatives) in pursuit of regional, continental and international stability	South African Police Service	

Glossary

Capable state: A state that is built institution by institution and sustained and rejuvenated over time. It requires leadership, sound policies, skilled managers and workers, clear lines of accountability, appropriate systems, and consistent and fair application of rules.

Climate change adaptation: Adaptation actions taken by governments, businesses or people to respond to current and future climate change impacts by adjusting their social, economic or ecological systems to moderate potential damages or benefit from opportunities associated with climate change.

Climate change mitigation: Action taken by governments, businesses or people to reduce or prevent greenhouse gas emissions, enhance carbon sinks by restoring forests, wetlands and marshlands, maintain soil health and protect ecosystems that remove these gases from the atmosphere. Mitigation efforts include transitioning to renewable energy sources, enhancing energy efficiency, adopting regenerative agricultural practices and protecting and restoring forests and critical ecosystems.

Climate change: Long-term change in the average weather patterns that have come to define the earth's local, regional and global climates.

Current account deficits: The trade balance is the difference between the value of exports of goods and services and the value of imports of goods and services. A trade deficit means that the country is importing more goods and services than it is exporting; a trade surplus means the opposite.

Developmental state: A state that has the organisational and technical capacity to tackle the root causes of poverty and inequality by intervening to support and guide economic development so that its benefits accrue across society (especially to the poor) and build consensus so that long-term national interest trumps short-term sectional concerns.

Discouraged work seekers: People who wanted to work but did not try to find work or start a business because they believed that there were no jobs available in their area, were unable to find jobs requiring their skills or had lost hope of finding any kind of work. Also see NEET below.

Early childhood development: Programmes that provide one or more forms of daily care, development, early learning opportunities and support to children from birth until the year before they enter formal school.

Fiscal policy is the use of government spending and taxation to influence the economy.

Global warming: An increase in the earth's average temperature due to an increased concentration of 'greenhouse gases' in the atmosphere as a consequence of human activities such as the burning of fossil fuels like coal, oil and gas, as well as clearing land, cutting down forests and other agricultural activities.

Inclusive growth: Growth that boosts national wealth and wellbeing, reduces poverty, ensures equity across generations and raises the standards of living of broad swathes of the population.

Inflation: Measures how much more expensive a set of goods and services has become over a certain period, usually a year.

Just transition: A transition undertaken in a way that is as fair and inclusive as possible to everyone concerned, creating decent work opportunities and leaving no one behind and mitigating any adverse economic or social effects of climate change adaption.

Labour force participation rate: The labour force participation rate is an estimate of the active workforce in an economy.

Labour force: The number of people employed plus those who are unemployed constitute the labour force or economically active population.

Local economic development: A process by which public, business and non-governmental role players work collectively in a locality to create better conditions for economic growth and employment creation.

Macroeconomics considers how whole economies work in order to understand how general economic goals such as employment, inflation, economic growth and productivity interact and how these goals are affected by government policies on investment, wages, exchange rates and other external conditions.

Monetary policy adjusts the supply of money in the economy to achieve some combination of inflation and output stabilisation.

Not in employment, education or training (NEET): The rate of young people (aged 15- to 24-years) who are not in employment, not in post-school education or training opportunities and are therefore recorded as unemployed.

Post-school education and training: Education and training provision for those who have completed school, those who did not complete their schooling and those who never attended school.

Poverty lines: Three different measures of poverty are monitored by Statistics South Africa for policy purposes:

- **Food poverty line:** The amount of money that an individual will need to afford the minimum required daily energy intake, commonly referred to as the 'extreme' poverty line;
- **Lower-bound poverty line:** The food poverty line plus the average amount spent on non-food items by households whose total expenditure is equal to the food poverty line; and
- **Upper-bound poverty line:** The food poverty line plus the average amount derived from non-food items of households whose food expenditure is equal to the food poverty line.

Social wage: The package of goods and services that the state makes available to citizens, including an income support system that pays pensions, benefits, grants, subsidies and tax concessions, as well as services such as health and education. In South Africa, it also includes free electricity and water to the most impoverished citizens.

Spatial inequality: The unequal distribution of resources and access to services and opportunities across different areas or locations. In South Africa, apartheid entrenched inequality along racial lines, which affected access to education, healthcare, welfare, public services, housing and infrastructure as well as to employment opportunities and income.

Spatial planning: The application of land use regulation and other instruments to guide the use of land to achieve public policy objectives.

Sustainable development: Development that meets the needs of the present generation without compromising the ability of future generations to meet their own needs by balancing economic growth, social inclusion and environmental protection.

Sustainable growth: A rate of growth that a country can maintain without creating other significant economic, environmental or social problems, especially for future generations.

Transition to 'net zero': The transition to energy, transportation, production and consumption systems that avoid further increases in the concentration of greenhouse gases in the atmosphere.

Unemployment: In the narrow definition, unemployment refers to the state of a person of being completely without work while available to work and taking active steps to find work. The expanded definition of unemployment includes all those who are able to work but have not taken further steps to find work.
